26. The first of two samples has 100 items with mean 15 and SD = 3. If the whole group has 250 items with mean 15.6 and SD = $\sqrt{13.44}$, then SD of the second group is
 a. 4 b. 5 c. 6 d. 3.52
27. A sample of 90 values has standard deviation 3 and their mean is 55. A second sample of 110 values has mean 60 and its standard deviation is 2. The combined variance is equal to
 a. 12.44 b. 13.24 c. 16.42 d. 13.65
28. The standard deviation of 25 numbers is 40. If each of the numbers which is greater than the standard deviation is increased by 5, then the new standard deviation will be
 a. 40 b. 45
 c. $40 + (21/25)$ d. None of these
29. If the standard deviation of the observations $-5, -4, -3, -2, -1, 0, 1, 2, 3, 4, 5$ is $\sqrt{10}$. The standard deviation of the observations 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25 will be
 a. $\sqrt{10} + 20$ b. $\sqrt{10} + 10$
 c. $\sqrt{10}$ d. None of these
30. The marks of some students were listed out of 75. The SD of marks was found to be 9. Subsequently, the marks were raised to a maximum of 100 and variance of new marks was calculated. The new variance is
 a. 81 b. 122 c. 144 d. None
31. The SD of a variate x is σ . The SD of the variate $\frac{ax+b}{c}$, where a, b and c are constants, is
 a. $\left(\frac{a}{c}\right)\sigma$ b. $\left|\frac{a}{c}\right|\sigma$
 c. $\left(\frac{a^2}{c^2}\right)\sigma$ d. None of these
32. The SD of 15 items is 6 of each item is decreased by 1, then standard deviation will be
 a. 5 b. 7 c. $\frac{91}{15}$ d. 6
33. The standard deviation of a variable x is 10. Then, the standard deviation of $50 + 5x$ is
 a. 50 b. 550 c. 10 d. 500
34. Suppose population A has 100 observations 101, 102, ..., 200 and another population B has 100 observations 151, 152, ..., 250. If V_A and V_B represent the variances of the two populations respectively, then $\frac{V_A}{V_B}$ is
 a. $\frac{9}{4}$ b. $\frac{4}{9}$
 c. $\frac{2}{3}$ d. 1
35. All the students of a class performed poorly in Mathematics. The teacher decided to give grace marks of 10 to each of the students. Which of the following statistical measures will not change even after the grace marks were given?
 a. Mean b. Median c. Mode d. Variance
36. If the standard deviation of $y_1, y_2, \dots, y_n$ is 3.5, then the standard deviation of $-2y_1 - 3, -2y_2 - 3, \dots, -2y_n - 3$ is
 a. -7 b. 9 c. 7 d. 2.45
37. The best statistical measure used for comparing two series is
 a. mean deviation b. range
 c. coefficient of variation d. None of these
38. Coefficient of variation of two distributions are 50 and 60 and their arithmetic means are 30 and 25, respectively. Difference of their standard deviation is
 a. 0 b. 1
 c. 1.5 d. 2.5
39. The sum of squares of deviations for 10 observations taken from mean 50 is 250. The coefficient of variation is
 a. 10% b. 40%
 c. 50% d. None of these

BITSAT Archives

- The mean of n terms is $\bar{x}$. If the first term is increased by 1, second by 2 and so on, then the new mean is [2014]

- If x_1 and x_2 are the means of two distributions such that $x_1 < x_2$ and $\bar{x}$ is the mean of the combined distribution, then [2010]
 - $\bar{x} < \bar{x}_1$
 - $\bar{x} > \bar{x}_2$
 - $\bar{x} = \frac{\bar{x}_1 + \bar{x}_2}{2}$
 - $\bar{x}_1 < \bar{x} < \bar{x}_2$

Answer with Solutions

Practice Exercise

- (a) Marks obtained from 3 subjects out of 300
 $= 75 + 80 + 85 = 240$
 If the marks of another subject is added, then the marks will be ≥ 240 out of 400.
 $\therefore$ Minimum average marks $= \frac{240}{4} = 60\%$
- (a) Here, $N = \sum_{i=1}^n f_i = k ({}^nC_0 + {}^nC_1 + \dots + {}^nC_n)$
 $= k(1+1)^n = k2^n$
 where, k is a constant of proportionality.
 and $\sum f_i x_i = k(1 \cdot {}^nC_1 + 2 \cdot {}^nC_2 + \dots + n \cdot {}^nC_n)$
 $= kn \left[1 + (n-1) + \frac{(n-1)(n-2)}{2!} + \dots + 1 \right] = kn2^{n-1}$
 $\therefore$ Mean, $\bar{x} = \frac{1}{2^n} (n \cdot 2^{n-1}) = \frac{n}{2}$
- (a) Combined mean height $= \frac{25 \times 161 + 35 \times 158}{60} = 159.25$
- (b) **Hint** We have, $\bar{x}_1 = 24$, $n_1 = 8$, $\bar{x}_2 = 20$, $n_2 = 7$ and $\bar{x}_3 = 6$, $n_3 = 5$
 We know that, $A = \frac{n_1 \bar{x}_1 + n_2 \bar{x}_2 + n_3 \bar{x}_3}{n_1 + n_2 + n_3}$
- (b) **Hint** We can write from given data in the question,
 $\bar{x}_1 = 520$, $\bar{x}_2 = 420$ and $\bar{x} = 500$
 $\therefore \bar{x} = \frac{n_1 \bar{x}_1 + n_2 \bar{x}_2}{n_1 + n_2}$... (i)
 Percentage of males employees in the company
 $= \frac{n_1}{n_1 + n_2} \times 100$
- (a) Suppose $g_1 = (x_1 x_2 \dots x_{n_1})^{1/n_1}$ and $g_2 = (y_1 y_2 \dots y_{n_2})^{1/n_2}$
 Clearly, g is the GM of the combined series.
 $\frac{1}{n} \ln g = \frac{1}{n} \ln [x_1 x_2 \dots x_{n_1} \cdot y_1 y_2 \dots y_{n_2}]$
 $= \frac{1}{n} [\ln(x_1 x_2 \dots x_{n_1}) + \ln(y_1 y_2 \dots y_{n_2})]$
 $= \frac{1}{n} [n_1 \ln g_1 + n_2 \ln g_2] = \frac{n_1}{n} \ln g_1 + \frac{n_2}{n} \ln g_2$
- (b) Given, mean $\bar{x} = \frac{\sum x_i}{n}$
 $\Rightarrow \sum x_i = 100 \times 50 = 5000$
 $\therefore$ Corrected mean $= \frac{5000 - 100 + 110}{100} = 50.10$
 But median remain same i.e. 52.
- (b) **Hint** Mode = 3 Median - 2 Mean
 $\Rightarrow$ Mean - Mode = 3 (Mean - Median)
- (b) In negatively skew distribution,
 Mean < Median < Mode
- (a) Mean is the most sensitive average to extreme values.
- (d) **Hint** Firstly, four numbers according to the condition $0 < y < x < 2y$, i.e. $x - y, y, x, 2x + y$
 $\text{Median} = \frac{2\text{nd term} + 3\text{rd term}}{2} = 10$
 $\Rightarrow y + x = 20$... (i)
 $\text{Range} = (2x + y) - (x - y) = 28$
 $\Rightarrow x + 2y = 28$... (ii)
- (d) Firstly, arrange the data in ascending order.
 i.e. 7, 10, 12, 15, 17, 19, 25.
 $\therefore Q_1 = \text{Size of } \left(\frac{n+1}{4} \right)\text{th item}$
 $= \text{Size of 2nd item} = 10$

$$Q_3 = \text{Size of } \left[\frac{3(n+1)}{4} \right] \text{th item}$$

$$= \text{Size of 6th item} = 19$$

$$\therefore \text{Quartile deviation} = \frac{Q_3 - Q_1}{2} = \frac{19 - 10}{2} = 4.5$$

$$13. (b) \text{ Median of } a, 2a, 3a, 4a, \dots, 50a \text{ is } \frac{25a + 26a}{2} = (25.5)a$$

$$\text{Mean deviation about median} = \frac{\sum_{i=1}^n |x_i - \text{Median}|}{n}$$

$$\Rightarrow 50 = \frac{1}{50} \{2|a| \cdot (0.5 + 1.5 + 2.5 + \dots + 24.5)\}$$

$$\Rightarrow 2500 = 2|a| \cdot \frac{25}{2} (2 \times 0.5 + 24 \times 1) = 2|a| \cdot \frac{25}{2} (25)$$

$$\therefore |a| = 4$$

$$14. (c) \bar{x} = \frac{\text{Sum of quantities}}{n} = \frac{\frac{n}{2}(a+l)}{n}$$

$$= \frac{1}{2} [1 + 1 + 100d] = 1 + 50d$$

$$\therefore \text{MD} = \frac{1}{n} \sum |x_i - \bar{x}| \Rightarrow 255 = \frac{1}{101}$$

$$[50d + 49d + 48d + \dots + d + 0 + d + \dots + 50d]$$

$$\Rightarrow 255 = \frac{2d}{101} \left[\frac{50 \times 51}{2} \right]$$

$$\therefore d = \frac{255 \times 101}{50 \times 51} = 10.1$$

$$15. (b) \text{ We know, } \bar{x} = \frac{\sum x}{n} \text{ or } \sum x = n\bar{x}$$

$$\therefore \text{Incorrect } \sum x = 200 \times 40 = 8000$$

$$\text{Corrected } \sum x = 8000 - 50 + 40 = 7990$$

$$\text{Corrected mean} = \frac{7990}{200} = 39.95$$

$$\text{We know that, } \sigma^2 = \frac{\sum x^2}{n} - \bar{x}^2 \text{ or } \sum x^2 = n(\sigma^2 + \bar{x}^2)$$

$$\text{Incorrect } \sum x^2 = 200(15^2 + 40^2) = 365000$$

$$\text{Corrected } \sum x^2 = 365000 - 50^2 + 40^2 = 364100$$

$$\therefore \text{Corrected } \sigma^2 = \frac{364100}{200} - (39.95)^2 = 224.5$$

$$\text{Hence, corrected } \sigma = \sqrt{224.5} = 14.98$$

$$16. (a) \therefore \text{Quartile deviation} = \frac{2}{3} \times \text{Standard deviation}$$

$$\therefore \text{Standard deviation} = \frac{20 \times 3}{2} = 30$$

$$17. (c) \text{ Let } d_i = x_i - 8$$

$$\therefore \sigma_x^2 = \sigma_d^2 = \frac{1}{18} \sum d_i^2 - \left(\frac{1}{8} \sum d_i \right)^2$$

$$= \frac{1}{18} \times 45 - \left(\frac{9}{18} \right)^2$$

$$= \frac{5}{2} - \frac{1}{4} = \frac{9}{4} \Rightarrow \sigma_x = \frac{3}{2}$$

$$18. (c) \text{ In the } 2n \text{ observations, half of them equal to } a \text{ and remaining half equal to } -a. \text{ Then, the mean of total } 2n \text{ observations is equal to zero.}$$

$$\therefore \text{SD} = \sqrt{\frac{\sum (x - \bar{x})^2}{N}} \Rightarrow 2 = \sqrt{\frac{\sum x^2}{2n}}$$

$$\Rightarrow 4 = \frac{\sum x^2}{2n} = \frac{2na^2}{2n} \Rightarrow a^2 = 4$$

$$\therefore |a| = 2$$

$$19. (c) \text{ Variance} = \frac{1}{n} \sum (x - \bar{x})^2 = \sigma^2$$

$$\text{New variance} = \frac{1}{n} \sum (\alpha x - \alpha \bar{x})^2 = \alpha^2 \frac{1}{n} \sum (x - \bar{x})^2 = \alpha^2 \sigma^2$$

$$20. (a) \text{ Let the two observations be } x_1 \text{ and } x_2.$$

$$\text{Then, } \frac{1 + 2 + 6 + x_1 + x_2}{5} = 4$$

$$\Rightarrow x_1 + x_2 = 11 \quad \dots (i)$$

$$\text{and } \frac{\left[(1-4)^2 + (2-4)^2 + (6-4)^2 + (x_1-4)^2 + (x_2-4)^2 \right]}{5} = 5.2$$

$$\Rightarrow (x_1 - 4)^2 + (x_2 - 4)^2 = 26 - 9 - 4 - 4 = 9 \quad \dots (ii)$$

On solving Eqs. (i) and (ii), we get

$$x_1 = 4 \text{ and } x_2 = 7$$

$$21. (a) \text{ Mean, } 7 = \frac{6 + 7 + 8 + 10 + x}{5} \Rightarrow x = 4$$

Variance

$$= \frac{(6-7)^2 + (7-7)^2 + (8-7)^2 + (10-7)^2 + (4-7)^2}{5}$$

$$= \frac{1^2 + 0 + 1^2 + 3^2 + 3^2}{5} = \frac{20}{5} = 4$$

$$22. (b) \sigma^2 = \left(\frac{\sum x_i^2}{n} \right) - \bar{x}^2$$

$$\bar{x} = \frac{\sum_{r=1}^{50} 2r}{50} = 51, \sigma^2 = \frac{\sum_{r=1}^{50} 4r^2}{50} - (51)^2 = 833$$

$$23. (a) \text{ According to the given condition,}$$

$$6.80 = \frac{\left[(6-a)^2 + (6-b)^2 + (6-8)^2 + (6-5)^2 + (6-10)^2 \right]}{5}$$

$$\Rightarrow 34 = (6-a)^2 + (6-b)^2 + 4 + 1 + 16$$

$$\Rightarrow (6-a)^2 + (6-b)^2 = 13 = 9 + 4$$

$$\Rightarrow (6-a)^2 + (6-b)^2 = 3^2 + 2^2$$

$$\therefore a = 3, b = 4$$

$$24. (c) \text{ Given that, } \sum x_i^2 = 400 \text{ and } \sum x_i = 80$$

$$\therefore \sigma^2 \geq 0$$

$$\Rightarrow \frac{\sum x_i^2}{n} - \left(\frac{\sum x_i}{n} \right)^2 \geq 0 \Rightarrow \frac{400}{n} - \frac{6400}{n^2} \geq 0$$

$$\therefore n \geq 16$$

25. (b) Given that, $\bar{x}_1 = 8, n_1 = 5, \sigma_1^2 = 24; \bar{x}_2 = 8, n_2 = 3, \sigma_2^2 = 24$

Mean of combined set,

$$\bar{x}_{12} = \frac{\bar{x}_1 \times n_1 + \bar{x}_2 \times n_2}{n_1 + n_2} \Rightarrow \bar{x}_{12} = \frac{8 \times 5 + 8 \times 3}{5 + 3} = 8$$

Combined variance,

$$\sigma_{12}^2 = \frac{n_1 \sigma_1^2 + n_2 \sigma_2^2 + d_1^2 + d_2^2}{n_1 + n_2}$$

Here, $d_1 = \bar{x}_1 - \bar{x}_{12}$ and $d_2 = \bar{x}_2 - \bar{x}_{12}$

$$\begin{aligned} \sigma_{12}^2 &= \frac{5 \times 24 + 3 \times 24 + (8 - 8)^2 + (8 - 8)^2}{5 + 3} \\ &= \frac{120 + 72}{8} = \frac{192}{8} = 24 \end{aligned}$$

Hence, the variance of combined set is 24.

26. (a) We know that, $\sigma^2 = \frac{n_1(\sigma_1^2 + d_1^2) + n_2(\sigma_2^2 + d_2^2)}{n_1 + n_2}$,

where, $d_1 = m_1 - a, d_2 = m_2 - a$, a being the mean of the whole group.

$$\therefore 15.6 = \frac{100 \times 15 + 150 \times m_2}{250} \Rightarrow m_2 = 16$$

$$\text{Thus, } 13.44 = \frac{\left[\begin{array}{l} (100 \times 9 + 150 \times \sigma^2) \\ + 100 \times (0.6)^2 + 150 \times (0.4)^2 \end{array} \right]}{250}$$

$$\Rightarrow 33.60 = (900 + 150 \sigma^2 + 36 + 24)$$

$$\therefore \sigma^2 = 16 \Rightarrow \sigma = 4$$

27. (a) We have, $n_1 = 90, \bar{x}_1 = 55$ and $\sigma_1 = 3$

and $n_2 = 110, \bar{x}_2 = 60, \sigma_2 = 2$

$$\text{Now, } \bar{x} = \frac{90 \times 55 + 110 \times 60}{200} = 57.75$$

$$d_1 = 55 - 57.75 = -2.75$$

$$\text{and } d_2 = 60 - 57.75 = 2.25$$

$$\begin{aligned} \therefore \sigma^2 &= \frac{90(9 + 7.5625) + 110(4 + 5.0625)}{200} \\ &= 12.44 \text{ (approx.)} \end{aligned}$$

28. (a) Given that, $M = 25$

$$\text{SD } (\sigma) = 40$$

If each number is increased by 5, then mean also increased by 5, therefore for the value of

$$\sigma^2 = \frac{1}{M} \sum (x_i - \bar{x})^2 \text{ will not change.}$$

Now, SD will also be 40.

29. (c) The new observations are obtained by adding 20 to each previous observation.

Hence, the standard deviation of new observations will be same, i.e. $\sqrt{10}$.

30. (c) Given, $\sigma = 9$

Let a student obtains x marks out of 75. Then, his marks out of 100 are $\frac{4x}{3}$. Each observation is multiplied by $\frac{4}{3}$.

$$\therefore \text{New SD, } \sigma = \frac{4}{3} \times 9 = 12$$

Hence, variance is $\sigma^2 = 144$.

31. (b) Suppose $y = \frac{ax+b}{c}$ and $y = \frac{a}{c}x + \frac{b}{c}$

$$\text{Now, } y = Ax + B, \text{ where } A = \frac{a}{c}, B = \frac{b}{c}$$

$$\bar{y} = A\bar{x} + B \Rightarrow y - \bar{y} = A(x - \bar{x}) \quad [\because B = y - Ax]$$

$$\Rightarrow (y - \bar{y})^2 = A^2(x - \bar{x})^2 \Rightarrow \sum (y - \bar{y})^2 = A^2 \sum (x - \bar{x})^2$$

$$\Rightarrow n \cdot \sigma_y^2 = A^2 \cdot n \sigma_x^2 \Rightarrow \sigma_y^2 = A^2 \sigma_x^2$$

$$\Rightarrow \sigma_y = |A| \sigma_x \therefore \sigma_y = \left| \frac{a}{c} \right| \sigma_x$$

32. (d) We know that, standard deviation is independent of change of origin.

Hence, if each item is decreased by 1, then standard deviation will be same, i.e. 6.

33. (a) Given, the standard deviation (SD) of the variable x is 10.

$$\therefore \text{Standard deviation of } 50 + 5x = 5x = 50 \quad [\because x = 10]$$

34. (d) Since, variance is independent of change of origin.

Therefore, variance of observations 101, 102, ..., 200 is same as variance of 151, 152, ..., 250.

$$\therefore V_A = V_B \Rightarrow \frac{V_A}{V_B} = 1$$

35. (d) If initially all marks were x_i , then

$$\sigma_2^2 = \frac{\sum (x_i - \bar{x})^2}{n}$$

Now, each is increased by 10.

$$\therefore \sigma_2^2 = \frac{\sum [(x_i + 10) - (\bar{x} + 10)]^2}{n} = \sigma_1^2$$

So, variance will not change whereas mean, median and mode will increase by 10.

36. (c) Let new observations be $x_1, x_2, \dots, x_n$ such that

$$x_i = -2y_i - 3 \Rightarrow y_i = -\frac{1}{2}x_i - \frac{3}{2}$$

$$\text{Thus, } \sigma_y = |-1/2| \sigma_x \Rightarrow \sigma_x = 2\sigma_y = 2 \times 3.5 = 7$$

37. (c) The best statistical measure used for comparing two series is coefficient of variation.

38. (a) Given, coefficient of variation, $C_1 = 50$

and coefficient of variation, $C_2 = 60$

$$\text{We have, } \bar{x}_1 = 30 \text{ and } \bar{x}_2 = 25$$

$$\therefore C = \frac{\sigma}{\bar{x}} \times 100$$

$$\therefore 50 = \frac{\sigma_1}{30} \times 100 \Rightarrow \sigma_1 = 15$$

$$\text{and } 60 = \frac{\sigma_2}{25} \times 100 \Rightarrow \sigma_2 = 15$$

$$\therefore \text{Required difference, } \sigma_1 - \sigma_2 = 15 - 15 = 0$$

39. (a) Clearly, we have

$$\text{Coefficient of variation} = \frac{\sigma}{\bar{x}} \times 100 = \frac{\sigma}{50} \times 100 \quad [\because \bar{x} = 50]$$

$$\text{Now, } \sigma = \sqrt{\frac{\sum (x_i - 50)^2}{n}} = \sqrt{\frac{250}{10}} = \sqrt{25} = 5$$

$$\therefore \text{Coefficient of variation} = \frac{5}{50} \times 100 = 10\%$$

BITSAT Archives

1. (c) **Hint** Let the observation be $x_1, x_2, x_3, \dots, x_n$.

$$\text{Now, mean } (\bar{x}) = \frac{x_1 + x_2 + \dots + x_n}{n}$$

When first term is increased by 1, second by 2 and so on, then observations will be

$$(x_1 + 1), (x_1 + 2), (x_1 + 3), \dots, (x_n + n)$$

Then, new mean

$$\begin{aligned} (\bar{x}_1) &= \frac{(x_1 + 1) + (x_2 + 2) + \dots + (x_n + n)}{n} \\ &= \frac{(x_1 + x_2 + \dots + x_n) + (1 + 2 + 3 + \dots + n)}{n} \end{aligned}$$

2. (a) Mean of the combined sample

$$\begin{aligned} \bar{x} &= \frac{n_1 \bar{x}_1 + n_2 \bar{x}_2}{n_1 + n_2} \\ &= \frac{35 \times 80 + 65 \times 70}{35 + 65} \\ &= 73.5 \end{aligned}$$

Standard deviation of the combined sample is given by

$$\sigma^2 = \frac{n_1 (\sigma_1^2 + d_1^2) + n_2 (\sigma_2^2 + d_2^2)}{n_1 + n_2}$$

$$\text{where, } d_1^2 = (\bar{x}_1 - \bar{x})^2 = (80 - 73.5)^2 = 42.25$$

$$d_2^2 = (\bar{x}_2 - \bar{x})^2 = (70 - 73.5)^2 = 12.25$$

$$\therefore \sigma^2 = \frac{35(4^2 + 42.25) + 65(3^2 + 12.25)}{35 + 65}$$

$$\Rightarrow \sigma^2 = 34.2 \Rightarrow \sigma = 5.85$$

3. (c) **Hint** Given, $n_1 = 60, \bar{x}_1 = 650, \sigma_1 = 8,$
 $n_2 = 80, \bar{x}_2 = 660, \sigma_2 = 7$

$$\therefore \text{ Combined SD} = \sqrt{\frac{n_1 \sigma_1^2 + n_2 \sigma_2^2}{n_1 + n_2} + \frac{n_1 n_2 (\bar{x}_1 - \bar{x}_2)^2}{(n_1 + n_2)^2}}$$

4. (d) Let n_1 and n_2 be the number of observations in two groups having means $\bar{x}_1$ and $\bar{x}_2$, respectively.

$$\text{Then, } \bar{x} = \frac{n_1 \bar{x}_1 + n_2 \bar{x}_2}{n_1 + n_2}$$

$$\begin{aligned} \text{Now, } \bar{x} - \bar{x}_1 &= \frac{n_1 \bar{x}_1 + n_2 \bar{x}_2}{n_1 + n_2} - \bar{x}_1 \\ &= \frac{n_2 (\bar{x}_2 - \bar{x}_1)}{n_1 + n_2} > 0 \quad [\because \bar{x}_2 > \bar{x}_1] \end{aligned}$$

$$\Rightarrow \bar{x} > \bar{x}_1 \quad \dots(i)$$

$$\text{And } \bar{x} - \bar{x}_2 = \frac{n_1 (\bar{x}_1 - \bar{x}_2)}{n_1 + n_2} < 0 \quad [\because \bar{x}_2 > \bar{x}_1]$$

$$\Rightarrow \bar{x} < \bar{x}_2 \quad \dots(ii)$$

From Eqs. (i) and (ii), we get

$$\bar{x}_1 < \bar{x} < \bar{x}_2$$

25

Linear Programming

Linear Programming

It is an important optimisation (maximisation or minimisation) technique used in decision making business and everyday life for obtaining the maximum or minimum values as required of a linear expression by satisfying certain number of given linear restrictions.

Linear Programming Problem (LPP)

The linear programming problem in general calls for optimising a linear function of variables called the objective function subject to a set of linear equations and/or linear inequations called the constraints or restrictions.

Objective Function

The function which is to be optimised (maximised/minimised) is called an objective function.

Constraints

The system of linear inequations or equations under which the objective function is to be optimised is called constraints.

Non-negative Restrictions

All the variables considered for making decisions assume non-negative values.

Mathematical Description of a General Linear Programming Problem

A general LPP can be stated as
(max/min) $Z = c_1x_1 + c_2x_2 + \dots + c_nx_n$ (Objective function)
subject to constraints

$$\left\{ \begin{array}{cccccc} a_{11}x_1 + a_{12}x_2 + \dots + a_{1n}x_n & (\leq = \geq) & b_1 \\ a_{21}x_1 + a_{22}x_2 + \dots + a_{2n}x_n & (\leq = \geq) & b_2 \\ \vdots & & \vdots \\ a_{m1}x_1 + a_{m2}x_2 + \dots + a_{mn}x_n & (\leq = \geq) & b_m \end{array} \right\}$$

and the non-negative restrictions

$$x_1, x_2, \dots, x_n \geq 0$$

where, all $a_{11}, a_{12}, \dots, a_{mn}; b_1, b_2, \dots, b_m; c_1, c_2, \dots, c_n$ are constants and $x_1, x_2, \dots, x_n$ are variables.

Slack and Surplus Variables

The positive variables which are added to left hand sides of the constraints to convert them into equalities, are called the slack variables. The positive variables which are subtracted from the left hand sides of the constraints to convert them into equalities, are called the surplus variables.

Important Definitions and Results

- **Solution of an LPP** A set of values of the variables $x_1, x_2, \dots, x_n$ satisfying the constraints of an LPP is called a solution of the LPP.
- **Feasible Solution of an LPP** A set of values of the variables $x_1, x_2, \dots, x_n$ satisfying the constraints and non-negative restrictions of an LPP is called a feasible solution of the LPP.
- **Optimal Solution of an LPP** A feasible solution of an LPP is said to be optimal or optimum, if it also optimises the objective function of the problem.
- **Graphical Solution of an LPP** The solution of an LPP obtained by graphical method i.e. by drawing the graphs corresponding to the constraints and the non-negative restrictions is called the graphical solution of an LPP.
- **Unbounded Solution** If the value of the objective function can be increased or decreased indefinitely, such solutions are called unbounded solutions.
- **Fundamental Extreme Point Theorem** An optimum solution of an LPP, if it exists, occurs at one of the extreme points (i.e. corner points) of the convex polygon of the set of all feasible solutions.

Graphical Method of Solving Linear Programming Problem

The graphical method is suitable for solving linear programming problems containing two variables only. This method of solving linear programming problem is referred as corner point method. The procedure of this method is as follows :

1. Find the feasible region of the LPP and determine its corner points (vertices) either by inspection or by solving the two equations of the lines intersecting at that point.

- Find the value of objective function $Z = ax + by$ at each corner point. Let M and m respectively denote the largest and the smallest values of these points.

- (i) When the feasible region is bounded, M and m are the maximum and minimum values of Z .

- (ii) When the feasible region is unbounded, then

- (a) M is the maximum value of Z , if the open half plane determined by $ax + by > M$ has no point in common with the feasible region. Otherwise, Z has no maximum value.

- (b) m is the minimum value of Z , if the open half plane determined by $ax + by < m$ has no point in common with the feasible region. Otherwise, Z has no minimum value.

NOTE A half plane (if a line divides XY -plane into two parts, then each part is known as half plane) in XY -plane is called an open half plane, if the line separating the half plane is not included in the half plane.

Method to Solve LPP

To solve a Linear Programming Problem (LPP) we use the following working steps :

- Step I** Firstly, write the given LPP in mathematical form by using mathematical formulation (if not given in mathematical form).
- Step II** Consider all constraints as linear equations.
- Step III** Draw the graph of each linear equation obtained in Step II and find their intersection points (if any).
- Step IV** Shade the common region of all the linear inequalities i.e. find feasible region and check that feasible region is bounded or unbounded.
- Step V** Now, find the corner points of feasible region and calculate the value of objective function at each corner point.
- Step VI**
- (i) If region is bounded, then maximum (say M) or minimum (say m) value out of these values obtained in Step V, is the required maximum or minimum value of the objective function.
 - (ii) If region is unbounded, no need to go next step. Then, maximum (say M) or minimum (say m) value out of these values obtained in Step V may or may not be required maximum or minimum value of the objective function. Then, we go to next step.
- Step VII** Suppose the given objective function is $ax + by$, then draw the graph of inequality $ax + by > M$ or $ax + by < m$. If open half plane obtained by these inequalities has no point in common with the feasible region obtained in Step IV, then M or m is the required maximum or minimum value. Otherwise, objective function has no maximum or no minimum value.

Practice Exercise

1. A wholesale merchant wants to start the business of cereal with ₹ 24000. Wheat is ₹ 400 per quintal and rice is ₹ 600 per quintal. He has capacity to store 200 quintal cereal. He earns the profit ₹ 25 per quintal on wheat and ₹ 40 per quintal on rice. If he stores x quintal rice and y quintal wheat, then for maximum profit, the objective function is

- a. $25x + 40y$ b. $40x + 25y$
c. $400x + 600y$ d. $\frac{400}{40}x + \frac{600}{25}y$

2. The feasible region for the following constraints $L_1 \leq 0$, $L_2 \geq 0$, $L_3 = 0$, $x \geq 0$, $y \geq 0$ in the diagram shown is

- a. area DHF
b. area AHC
c. line segment EG
d. line segment GI

3. The linear programming problem
Maximise $Z = x_1 + x_2$
Subject to constraints

$$\begin{aligned} x_1 + 2x_2 &\leq 2000 \\ x_1 + x_2 &\leq 1500 \\ x_2 &\leq 600 \\ x_1 &\geq 0, \text{ has} \end{aligned}$$

- a. no feasible solution
b. unique optimal solution
c. a finite number of optimal solutions
d. infinite number of optimal solutions
4. The objective function $Z = 30x + 20y$, subject to constraints $x + y \leq 8$, $x + 2y \geq 4$, $6x + 4y \geq 12$, $x \geq 0$, $y \geq 0$, has
- a. unique solution
b. infinitely many solutions
c. minimum at (4, 0)
d. minimum 60 at point (0, 3)

5. If the objective function $Z = 4x + 2y$, subject to constraints $4x + 2y \geq 46$, $x + 3y \leq 24$ and x and y are greater than or equal to zero, then the maximum value of Z is

- a. 46 b. 96
c. 52 d. None of these

6. The maximum and minimum values of $Z = 5x + 2y$, subject to the constraints $2x + 3y \geq 3$, $x - 2y \geq 2$, $6x + 4y \leq 24$, $-3x + 2y \leq 3$ and $x, y \geq 0$, are respectively

- a. $\frac{18}{7}, \frac{2}{7}$ b. $19, \frac{63}{13}$ c. 19, 63 d. 19, 13

7. The maximum value of $Z = 10x + 6y$ subject to constraints $x \geq 0$, $y \geq 0$, $x + y \leq 12$, $2x + y \leq 20$, is
- a. 72 b. 80 c. 104 d. 110

8. The maximum value of $Z = 3x + 5y$, under the constraints $x + 2y \leq 2000$, $x + y \leq 1500$, $y \leq 600$ and $x, y \geq 0$, is

- a. 5000 b. 5500
c. 6000 d. None of these

9. If x_1 and x_2 are optimal solution of LPP, then which of the following is also an optimal solution?

- a. $x = kx_1 + (1 - k)x_2$; $k \in R$
b. $x = kx_1 + (1 - k)x_2$; $0 \leq k \leq 1$
c. $x = kx_1 + (1 + k)x_2$; $0 \leq k \leq 1$
d. $x = kx_1 + (1 + k)x_2$; $k \in R$

10. The maximum value of $Z = 9x + 13y$ subject to constraints $2x + 3y \leq 18$, $2x + y \leq 10$, $x \geq 0$, $y \geq 0$, is
- a. 130 b. 81 c. 79 d. 99

11. Which of the following is a convex set?

- a. $\{(x, y) : x^2 + y^2 \geq 4\}$ b. $\{(x, y) : 3x^2 + 2y^2 \leq 6\}$
c. $\{x, y : 9 \leq x^2 + y^2 \leq 25\}$ d. None of these

12. The maximum value of $Z = 5x + 3y$, subject to the constraints $3x + 5y \leq 15$, $5x + 2y \leq 10$; $x, y \geq 0$, is

- a. $\frac{235}{19}$ b. $\frac{325}{19}$ c. $\frac{523}{19}$ d. $\frac{532}{19}$

13. The minimum value of $Z = 2x_1 + 3x_2$, subject to the constraints $2x_1 + 7x_2 \geq 22$, $x_1 + x_2 \geq 6$, $5x_1 + x_2 \geq 10$ and $x_1, x_2 \geq 0$, is

- a. 14 b. 20 c. 10 d. 16

BITSAT Archives

1. A furniture dealer deals in only two items namely tables and chairs. He has ₹ 5000 to invest and space to store at most 60 pieces. A table cost him ₹ 250 and a chair ₹ 60. He can sell a table at a profit of ₹ 15. Assume that he can sell all the items that he produced. The number of constraints in the problem are [2014]
 - a. 2
 - b. 3
 - c. 4
 - d. 5
2. The shaded region given below represents the constraints (other than $x \geq 0, y \geq 0$) [2013]

- a. $3x + 4y \leq 400, y \leq 25, x \leq 4y$
 - b. $3x + 12y \geq 400, y \leq 25, x \geq 4y$
 - c. $3x + 12y \leq 400, y \leq 25, x \geq 4y$
 - d. None of these
3. The optimal value of the objective function is attained at the point [2009]
 - a. given by intersection of inequations with axes only
 - b. given by intersection of inequations with X-axis only
 - c. given by corner point of the feasible region
 - d. None of the above

Answer with Solutions

Practice Exercise

1. (b) For maximum profit, $Z = 40x + 25y$
2. (c) In the given figure, the feasible region for given constraints is the line segment EG.
3. (d) Given constraints are $x_1 + 2x_2 \leq 2000, x_1 + x_2 \leq 1500, x_2 \leq 600$ and $x_1 \geq 0$. The feasible region is OACDEO.

Given, $Z = x_1 + x_2$

At $O(0, 0)$, $Z = 0 + 0 = 0$
 At $A(1500, 0)$, $Z = 1500 + 0 = 1500$
 At $C(1000, 500)$, $Z = 1000 + 500 = 1500$
 At $D(800, 600)$, $Z = 800 + 600 = 1400$
 At $E(0, 600)$, $Z = 0 + 600 = 600$
 Here, Z is maximum on the segment AC.
 Hence, there are infinite optimal solutions.

4. (d) Feasible region is ABCDFA and $Z = 30x + 20y$.

Now, at $A(4, 0)$, $Z = 30 \times 4 + 0 = 120$
 At $B(8, 0)$, $Z = 30 \times 8 + 0 = 240$
 At $C(0, 8)$, $Z = 0 + 20 \times 8 = 160$
 At $D(0, 3)$, $Z = 0 + 20 \times 3 = 60$
 At $F\left(1, \frac{3}{2}\right)$, $Z = 30 \times 1 + 20 \times \frac{3}{2} = 60$

Hence, minimum value is 60 at $(0, 3)$.

5. (b) Feasible region is ABCA.

and $Z = 4x + 2y$
 At point $C(9, 5)$, $Z = 4 \times 9 + 2 \times 5 = 46$
 At point $A(11.5, 0)$ $Z = 4 \times 11.5 + 2 \times 0 = 46$
 and at point $B(24, 0)$, $Z = 4 \times 24 + 0 = 96$
 $\therefore$ Maximum value of $Z = 96$

6. (b) Draw a graph of the following straight lines in the first quadrant.

$AB: 2x + 3y = 6$, two points on AB are $(3, 0)$ and $(0, 2)$
 $CD: x - 2y = 2$, two points on CD are $(2, 0)$ and $(0, 1)$
 $EF: 6x + 4y = 24$, two points on EF are $(4, 0)$ and $(0, 6)$
 $GH: -3x + 2y = 3$, two points on GH are $(-1, 0)$ and $(0, 3/2)$

Hint The intersection points of given lines are

$$Q = \left(\frac{18}{7}, \frac{2}{7}\right), P = \left(\frac{3}{13}, \frac{24}{13}\right), R = \left(\frac{7}{2}, \frac{3}{4}\right) \text{ and } S = \left(\frac{3}{2}, \frac{15}{4}\right)$$

7. (c) **Hint** Given constraints are

$$x \geq 0, y \geq 0, x + y \leq 12, 2x + y \leq 20$$

The feasible region is $OABCO$.

Corner points are $O(0, 0)$, $A(10, 0)$, $B(8, 4)$ and $C(0, 12)$

8. (b) **Hint** Draw the graph of the straight lines

$$x + 2y = 2000 \quad \dots(i)$$

$$x + y = 1500 \quad \dots(ii)$$

and $y = 600 \quad \dots(iii)$

In the first quadrant and obtain the feasible region as $OABCD$.

Solving Eqs. (i), (ii) and (iii) in pairs, we get

$O(0, 0)$, $A(1500, 0)$, $B(1000, 500)$, $C(800, 600)$, $D(0, 600)$

9. (b) In case, there are infinite number of optimal solutions, then every points x_1 and x_2 respectively the two solutions, is also solution. Here, x is the point dividing the line joining x_1 and x_2 internally in the ratio $k : 1 - k$ ($0 \leq k \leq 1, k \in R$)

10. (c) The feasible region is $OABCO$.

$$\text{At } O(0, 0), Z = 0$$

$$\text{At } A(5, 0), Z = 45$$

$$\text{At } B(3, 4), Z = 27 + 52 = 79$$

$$\text{At } C(0, 6), Z = 78$$

$\therefore$ Maximum value of Z is 79.

11. (b) $\{(x, y) : \{3x^2 + 2y^2 \leq 6\} = \left\{(xy) : \frac{x^2}{2} + \frac{y^2}{3} \leq 1\right\}$

= Set of points on and inside the ellipse

$$\frac{x^2}{2} + \frac{y^2}{3} = 1$$

12. (a) Feasible region is $ABCOA$.

$$\text{Given, } Z = 5x + 3y$$

$$\text{At point } A(2, 0)$$

$$Z = 5 \times 2 + 0 = 10$$

$$\text{At point } B\left(\frac{20}{19}, \frac{45}{19}\right),$$

$$Z = \frac{5 \times 20}{19} + \frac{3 \times 45}{19} = \frac{235}{19}$$

$$\text{At point } C(0, 3)$$

$$Z = 5 \times 0 + 3 \times 3 = 9$$

Hence, maximum value of Z is $\frac{235}{19}$.

13. (a) Given, $Z = 2x_1 + 3x_2$

At $D(0, 10)$, $Z = 2(0) + 3(10) = 30$

At $B(1, 5)$, $Z = 2(1) + 3(5) = 17$

At $A(4, 2)$, $Z = 2(4) + 3(2) = 14$

At $C(11, 0)$, $Z = 2(11) + 3(0) = 22$

Hence, the minimum value of Z is 14.

BITSAT Archives

1. (c) Let x tables and y chairs be purchased for maximum profit.

Then,

$$\begin{aligned} x + y &\leq 60 \\ 5x + \frac{6y}{5} &\leq 100 \\ x \geq 0, y &\geq 0 \end{aligned}$$

So, number of constraints are four.

2. (c) Consider a point $(2, 0)$ on X -axis.

Substituting $x = 2, y = 0$ in

$$3x + 12y = 6 < 400$$

Hence, one constraints is

$$3x + 12y \leq 400.$$

Again, substituting $x = 2, y = 0$ in

$$x - 4y = 2 - 0 > 0$$

$\therefore x - 4y \geq 0$ is other constraints.

and also the third constraint from the figure is $y \leq 25$.

3. (c) The optimal value of the objective function is attained at the points given by corner points of the feasible region.

Grammar

Tense and Agreement

Tense can be Past, Present or Future. These can further be divided into the following segments

1. **Simple** The action is mentioned simply. Nothing is said about whether the action is complete or not.
2. **Continuous** The action is incomplete or going on at the time of speaking.
3. **Perfect** The action is finished or complete with respect to a certain point of time.
4. **Perfect Continuous** The action is going on continuously over a long period of time and is yet to be finished.

Simple Present

(*He, She, It*, singulars – $V_1 + s, es$)

(*We, They, You*, I, plurals – V_1)

To express a habitual action.

e.g. He *goes* for a walk in the morning.

To express universal truth.

e.g. The Sun *rises* in the East.

In exclamatory sentences beginning with '*here*' and '*there*', to express what is actually taking place in the present.

e.g. Here he *comes*!

To indicate a future event that is part of a plan or an arrangement.

e.g. PM *comes* to the town next month.

To introduce quotations.

e.g. Gita *says*, give your best and do not worry for the result.

Present Continuous

(Is/Am/Are + V₁ + ing)

To express an action going on at the time of speaking.

e.g. I am *studying* in the class.

To express a temporary action which may not be actually happening at the time of speaking. (These days)

e.g. I am *preparing* for the competition.

It also represents future action or a definite arrangement in the near future.

e.g. I am *going* to Mumbai tomorrow.

When the reference is to a particular obstinate habit, the present continuous is used instead of present simple. An adverb, like always constantly, etc is also used.

e.g. It is no use scolding him, he *always does* / *is always doing* what is forbidden.

The following verbs are normally used in the present simple instead of present continuous.

- (a) **Verbs of Appearance** Look, appear, seem.
- (b) **Verbs of Emotion** Want, wish, desire, feel, like, love, hate, hope, prefer, etc.
- (c) **Verbs of Perception** See, hear, smell, taste, notice, recognise, etc.
- (d) **Verbs of Possession** Belong to, consist of, contain, own, etc.
- (e) **Verbs of Thinking** Agree, believe, consider, forget, imagine, know, mind, remember, etc.

Present Perfect (Has / Have + V₃)

It is used to indicate completed activities in the immediate past. It is a mixture of present and past. It always implies a strong connection of past with the present. e.g. He *has* just gone out.

The most important point is that it is used with the past actions whose time is not given and not definite.

e.g. He *has* come here.

Present Perfect Continuous

(Have been/Has been + V₁ + ing)

To express an action which began at some time in the past and is still continuing.

e.g. He *has been playing* since 8 o' clock.

Simple Past (V₂)

To indicate an action completed in the past at a definite time.

e.g. I *did* this yesterday.

Denoted by *last, ago, yesterday, back, before, formerly, any fixed time, etc.*

e.g. We *heard* a terrifying news *last* night.

To indicate past habits, indicated generally by the words like *often, seldom, never, normally, generally, always, frequently, rarely, daily, used to, etc.*

e.g. As a kid, I *often went* to school on foot.

After *it is time*. Which is a phrasal expression.

e.g. It is time Indian cricket team ~~*starts*~~ / *started* winning tense matches.

Past Continuous (Was / Were + V₁ + ing)

To denote an action going on at some time in the past.

e.g. When I went to his house, he *was* playing.
I *was* studying yesterday.

For persistent habits in the past.

e.g. He *was* always *mooching* around.

Past Perfect (Had + V₃)

To describe an action completed before a certain moment in the past.

e.g. I met him in New Delhi in 2000. I *had* seen him last five years before.

Past perfect should be used only when we wish to say that one action completed before the other started. It should never be used at all in any other sense.

e.g. I *had* gone to Mumbai when he came to meet me.

Past Perfect Continuous

(Had been + V₁ + ing)

To express an action that began before a certain point of time in the past and continued upto that time.

e.g. He *had been studying* for two hours when his girlfriend came.

If there is past tense in the Principal clause, it must be followed by a past tense in the Dependent clause. In an Indirect narration, the Past Simple in the Dependent clause is changed to Past Perfect, if the Principal clause is in the Past tense.

e.g. He told me that he *intended* to start a business. He told me that he *had intended* to start a business.

The exception to the above rule is if some universal, habitual or generally recognised fact is mentioned in the Dependent clause, the Present tense must be retained in all conditions.

e.g. He told me that the Earth *moves* round the Sun.

Simple Future

To express an action that is still to take place.

e.g. I *shall* go for the preparation when I *receive* the call letter.

Future Continuous

(Shall be / Will be + V_1 + ing)

To express an action as going on at some time in the future.

e.g. I *shall* be earning when I am 21.

Future Perfect

(Shall have / Will have + V_3)

To indicate the completion of an action by a certain future time.

e.g. We *shall* have completed our syllabus by next month.

Future Perfect Continuous

(Will have been / Shall have been + V_1 + ing)

To indicate an action which is in progress over a period of time and will be in progress at a certain time in future.

e.g. Time *will have been* clocking for ages in the coming moments.

Subject-Verb Agreement

1. If two subjects together express one idea, one being added to the other for the sake of emphasis or clarification, the verb is singular. No plurality is left to exist in such a case.
e.g. Slow and steady wins the race.
2. When the plural noun denotes some specific quantity, distance, time or amount considered as a whole, the verb *is* generally singular.
e.g. Six miles *is* not a long distance for me.
3. Two or more singular subjects connected by *either-or*, *neither-nor*, take a verb in singular (third person singular verb).
e.g. *Either* Vivek *or* Vimal *is* absent today.
4. When the subjects joined by *or* or *nor* are of different numbers, the verb must be plural and the plural subject must be placed next to the verb.
e.g. *Either* Amit *or* his parents *are* coming to the party.
5. Any noun qualified by *each* or *every* is followed by a singular verb. Even if two nouns so qualified are connected by *and*, the verb must still be singular.
e.g. *Each* one of these boys *has* the potential to get selected.

6. Verb is used according to the first with subject as *and not, with, as* well as, in addition to, along with, beside, like, together with.
e.g. Rahul *and not* his friend was absent.
7. When two nouns or pronouns are joined by *not only...but also*, the verb agrees with the second noun or pronoun.
e.g. *Not only* the officer *but also* the soldiers were awarded.
8. If the subject is *the number of*, the singular verb is used and the noun is plural.
e.g. The number of one-dayers played these days *has* / ~~have~~ led to the deterioration of the game.
9. *A great many* is always followed by plural verb and a plural noun.
e.g. A great many students *have* passed this year.
10. Many *a* is always followed by a singular verb and a singular noun.
e.g. Many *a* soldier *has* got medal this year.
11. A singular or a plural verb is used with such nouns as *pains, a lot of, means, variety, plenty, rest, wages*, a large number of according to the sense in which they are used.
e.g. A large number of girls were absent on account of bad weather.
12. A verb should agree with its subject and not with the complement. But in the case of sentence beginning with *The*, the verb is according to the predicate/complement.
e.g. Our only guide was *the* stars.
The stars were our only guide.
13. In a compound sentence, both auxiliary verbs and principal verbs should be mentioned separately if they differ in number, form or voice. In such cases, one verb cannot act for both the clauses.
He has not married and will not marry in near future.
14. Use of *shall* and *will*.

To express simple future action *shall* is used in the first person, and *will* in the second and third person.

e.g. I *shall* come.

You *will* come. He *will* come.

Shall is used in the second and third person to express *command, promise, threat, determination*.

Will is used in the first person to express *Willingness, Promise, Threat, Determination*.

e.g. You *shall* not steal. (Command)

Modals

What are Modals?

The finites which express the mode or manner of the actions denoted in the **principal verb** are termed as Modals. This class of helping verbs not only assists in forming questions and negatives, but expresses a wide range of meanings also.

These helping verbs are, 'can', 'could', 'will', 'would', 'shall', 'should', 'may', 'might', 'must', 'ought to', 'have to', 'has to' and 'had to'. These are also known as **modal auxiliaries**.

They express the degree of certainty of the action in the sentence or the attitude or opinion of the writer/speaker concerning the action. 'need', 'dare' and 'used to' are called **semi-modals**.

Functions of Modals

Would (past form of 'will')

- (i) It expresses the past form of will
e.g. He informed me that he *would* dance in my marriage function.
- (ii) To express past habit
e.g. He *would* drink a cup of coffee in the morning.
- (iii) For request
e.g. *Would* you please give me your bike?
- (iv) To express wish
e.g. I *would* that you were rich!
- (v) To express an imaginary condition
e.g. I *would* have a big house if I earned ₹ 10 crore.

Should (past form of 'shall')

- (i) To express duty or obligation
e.g. I *should* help my friends. (*duty*)
- (ii) To express opinion
e.g. They *should* be on the way to Jaipur.
- (iii) To give or take advice or suggestion.
e.g. We *should* go to the temple.
- (iv) After 'lest' when someone expresses fear.
e.g. Walk carefully *lest* you should fall.

Can

- (i) To express an ability, capability, capacity or power
e.g. (a) I *can* lift 60 kg.
(b) She *can* pass the MBA examination.
(c) *Can* you understand the English language?
(d) I *can* grant you leave.
- (ii) To show possibility
e.g. (a) She *can* fall on the road.
(b) You *can* go there.

- (iii) To take or give permission
e.g. (a) *Can* I sit here?
(b) You *can* park your scooter.

Could (past form of 'can')

- (i) To express ability/talent in the past
e.g. (a) They *could* win the game last month.
(b) She *could* sing beautifully.
- (ii) To express polite request
e.g. (a) *Could* I have your pen?

May

- (i) To show possibility or probability
e.g. (a) You *may* attend the school today.
(b) She *may* win the match.
- (ii) To give or take permission
e.g. (a) *May* I come in?
(b) Yes, you *may* come in.
- (iii) To wish or pray
e.g. (a) *May* you get well soon!
(b) *May* God bless you with a child!
- (iv) To show a purpose
e.g. My friend is joining a new company, so that he *may* achieve his target.

Might (past form of 'may')

- (i) To express less possibility
e.g. He *might* help us.
- (ii) For permission
e.g. *Might* I begin to reveal the truth.
- (iii) To express guess
e.g. That *might* be Rohit.

Must

- (i) To express necessity or obligation
e.g. (a) You *must* take part in the competition.
(b) We *must* love our motherland.
- (ii) To indicate assumption or conclusion
e.g. (a) They *must* be here in the evening.
(b) Mr AK Gupta *must* be a good teacher.
- (iii) In case of prohibition
e.g. You *must not* bunk school.

Ought to

- (i) To express moral obligation / duty
e.g. (a) You *ought to* respect your parents.
(b) You *ought to* serve the nation.
- (ii) To give advice
e.g. You *ought to* study hard to achieve success.

Need

As a modal auxiliary verb in negative terms, it indicates *absence of obligation*. It expresses the *speaker's authority or advice* and is used for the present and the future.

e.g. You **needn't** type this letter.

- (i) The interrogative is formed by inversion.
e.g. *Need* I speak to him?
- (ii) Its past is **had to** in the affirmative sentence, **need not have** in the negative and **need have** in the interrogative.
e.g. (a) *Need* I have gone to him?
(Interrogative in the past)

- (b) I had *needed to* go to him. (Affirmative in the past)
- (c) You *needn't have* gone to meet him.
(Negative in the past)

Dare

As a modal auxiliary, 'dare' refers to being bold and courageous. The negative is formed by **dare not** and the interrogative by inversion.

- e.g. (a) I *dare not* disturb them.
(b) *Dare* we talk to them?

Used to

- (i) A discontinued habit or a past situation which is no more in the present.
e.g. He used to drink daily. (Now he does not drink)
- (ii) Something existing in the past.
e.g. This *used to* be a dense jungle before.

Prepositions

Words used with nouns/pronouns to show their relationship.

1. **In** is used for bigger places (towns, cities, countries) while **at** is used for smaller places.
e.g. I live *at* Shastri Nagar *in* Meerut.
2. **In / Into** **In** is used in speaking of things at rest. **Into** is used in speaking of things in motion.
e.g. (a) He is shopping *in* the market.
(b) He jumped *into* the well.
3. **On** denotes position, **upon** denotes movement.
e.g. (a) The cat is *on* the table.
(b) The cat pounced *upon* the mouse.
4. **With** denotes the instrument and **by** denotes the agent.
e.g. (a) The letter was written *by* him *with* his pen.
(b) The music was generated *by* / *with* a guitar.
5. **Ago** refers to past time while **before** denotes precedence between two events.
e.g. (a) Long *ago*, there was a king named Rama.
(b) Ram existed *before* Mahabharata was fought.
6. **Above** and **below** merely denote position while **over** and **under** also carry a sense of covering or movement.
e.g. (a) We live *below* the roof.
(b) Sky is *above* us.
(c) Train is running *under* the bridge.
(d) The train is standing *below* the bridge.
(e) The bird is flying *over* the pond.

Under is used before a noun to indicate that a person or thing is being affected by something or is going through a particular process.

e.g. I'm rarely under pressure and my co-workers are always nice to me.

Under can mean junior in ranks.

e.g. He is *under* me.

If something happens *under* a particular person or government, it happens when that person or government is in power.

e.g. There will be no new taxes *under* his leadership.

If someone does something *under* a particular name, he uses that name instead of his real name.

e.g. The patient was registered *under* a false name.

Beneath has the same meaning as *under*, but it is better to use it for abstract meanings.

e.g. *Beneath* the festive mood, there is an underlying apprehension.

7. Difference between *On time*, *In time* and *In good time*.

On time signifies absolutely right time, neither before nor after.

e.g. The flight is *on time*.

In time means you are not late for it.

e.g. I arrived just *in time* for my flight.

In good time means with comfortable margin.

e.g. I arrived at the airport *in good time*.

8. Difference between *at the beginning/at the end* and *in the beginning/in the end*.
- At the beginning* means literally at the beginning.
e.g. India scored fast *at the beginning* of the match.
- At the end* means literally at the end.
e.g. *At the end* of the book, you'll find the bibliography.
- In the beginning* (or *at first*) means in the early stage. It implies that later there was a change.
e.g. Sachin was nervous *in the beginning*, later he settled down.
- In the end* (or *at last*) means eventually/after sometime.
e.g. At first he was scared, but *in the end* he started enjoying.
9. No preposition is placed after the following verbs when they are used in active voice. *Order, request, reach, attack, resemble, emphasis, accompany, discuss, investigate, comprise, enter (come into), flee* (a place), *join, affect, board, etc.*
- e.g. (a) Our forces attacked ~~on~~ the enemy fort.
(b) We reached ~~at~~ the station on time.
(c) We ordered ~~for~~ a cup of tea.
(d) He resembles ~~to~~ his father.
10. Omit *to* after verb of communication such as *advise, tell, ask, beg, command, encourage, request, inform, order*.
- e.g. (a) I advised ~~to~~ him to study hard.
(b) I commanded ~~to~~ him to leave.
11. *Till* is used in particular time while *until* is used for indefinite time. But whenever *till* and *until* are being used as the first word of a sentence, only *until* is used.
- e.g. (a) We shall work *until* we fell down.
(b) We shall work *till* 15 hrs.
(c) ~~Till~~ / *Until* 30, he was a bachelor.
12. *Till* is used for time while *upto* for place.
- e.g. (a) We shall work *till* 5 pm.
(b) We walked ~~till~~ / *upto* the station.
13. The same preposition should not be used with two words unless it is appropriate to each of them.
- e.g. (a) It is different and inferior *to* the other.
(b) It is different *from* and inferior *to* the other.
14. *Since* and *from* are used before a noun or phrase denoting some point of time, but whereas *since* is preceded by a verb in some perfect tense, *from* is used with other tenses except the perfect tense. *For* refers to a period of time, not to a point of time and should not be replaced by *since* or *from*.
- e.g. (a) I haven't taken anything *since* yesterday.
(b) I started my work *from* 1st January.
(c) I have been practicing *for* ten days.
15. Regarding the phrases of time, *morning, afternoon* and *evening* are preceded by the preposition *in* whereas *dawn, daybreak, noon, midday* and *midnight* are preceded by the preposition *at*. Besides, when these time phrases are qualified by *last* or *next*, they are not preceded by any preposition.
- e.g. (a) I like to roam around *in* the evening.
(b) I'll see you *at* night.
(c) The Sun is hottest *at* midday.
(d) I met him last evening.
16. *Across*, something that lies between two points. Through, from one side of an opening to the other.
e.g. Walk *across* a road and pass *through* a tunnel.
17. *Between/Among* *Between* is used while referring to two persons/things whereas *Among* is used for more than two.
- e.g. (a) *Between* the two of you, who is stronger?
(b) The sweets are to be distributed *among* ten friends.
18. *Beside/Besides* *Beside* means 'by the side of', whereas *Besides* means 'in addition to'.
- e.g. (a) *Besides* eating he is also watching TV.
(b) You were sitting *beside* him.
19. *From/Between* *From* is normally used with 'to/till', whereas *Between* is used with 'and'.
- e.g. (a) He works *from* nine *to* six (or nine *till* six).
(b) The meeting was scheduled to be held *between* two pm *and* three pm.
20. *Within/In* *Within* means before the end of time, whereas *In* means at the end of time.
- e.g. (a) He will return *in* five minutes.
(b) He will return *within* five minutes.

Conjunctions

Conjunctions are special kinds of connectors. They help you to join two clauses together. The conjunctions **as**, **since**, **because**, **for** and **in case** are used to give reasons. They introduce the explanation that answers the question 'why'?

The conjunctions **so that**, **in order that** and **in case** and the connectors **so as to** and **in order to** are used to state a purpose. They introduce the answer to the question what for? The conjunctions **if**, **unless** and **as long as** are used to introduce conditions.

Read the sentences in Column 'A', some words are in bold. Their role is analysed in the sentences as indicated in Column 'B'.

S No.	Column A	Column B
1.	Rabindranath Tagore won the Nobel Prize for Literature for his collection of poems, 'Geetanjali.' Furthermore , he continued writing inspite of his busy schedule.	Adds information (and as well as, both, furthermore, moreover, additionally but also).
2.	If one has a positive attitude, one can achieve success. Similarly , if one works hard unconditionally, success will never elude one.	Introduces a similar idea (in the same way).
3.	"Today's generation is really obstinate, Granny said, "Even when you scold them for their mistakes, still they do not change their ways".	Gives a different/opposite idea (However, nonetheless, whereas, nevertheless, but),

Vocabulary

Vocabulary is a broad concept in itself. One can enhance one's language skills by acquiring a good hold over **vocabulary**. To score high in the exam, a candidate should improve his/her vocabulary skills. It helps you in solving questions of Comprehension, Cloze Test, Antonyms and Synonyms etc.

Here we illustrate some steps to enrich vocabulary.

Step I Identify the Word

Whenever we come across a new word in a sentence while reading a text book, newspaper or a magazine, we should look up its meaning. This is the best way to enhance vocabulary skills.

Step II Identify the Antonym of that Word

Along with the meaning of a word, its antonyms (words with opposite meaning) should also be taken into consideration. A good knowledge of words and their antonyms is very beneficial from the examination point of view.

Step III Find Synonym of that Word

The knowledge of words that are similar or closer in meaning to one another is very useful. It makes a student efficient enough to have a strong sense of the language.

Step IV Form a Proper Sentence

This is one of the most important parts in vocabulary building. It serves to stimulate memory by recalling the words as and when needed, apart from making the proper sense and the use of words clear.

To understand these steps, we consider an example. Suppose we take a word 'Antique'.

Step I Antique means something that is old and has not been renewed for long e.g. Antique building (Old building).

Step II Opposite of Antique is modern. It also Modern can be replaced by, Renovated and Recent etc.

Step III Synonyms are the similar words in meaning. For synonyms, Antique can be replaced by Traditional and Ancient etc.

Step IV To be more familiar with the word, we should use them in sentence form. For 'Antique' a proper sentence is "People love to see the Antique items."

Following are the topics that we learn in vocabulary.

1. Antonyms
2. Synonyms
3. One word substitutions

Comprehension Ability

Comprehension involves a thorough understanding of the given passage consisting of one or more paragraphs. It forms a very good exercise for brilliant and intelligent reading and judicious selection. It is meant to test the intelligence of candidates and their ability to comprehend a given piece of text.

Tips for Attempting Comprehension

1. **Skim** once as rapidly as possible to determine the main idea before you look at the questions. Do not worry about words you do not know, at this stage.
2. **Underline the words** that you do not understand to facilitate a complete understanding of the passage. This will enable you to solve the vocabulary questions quicker.
3. **Keep forging ahead** and don't get bogged down if there is a word or sentence you do not understand. Sometimes you can sense the meaning of the word/sentence from the context. It is also possible that the word/sentence may not be the basis of any questions.
4. **Read each question** carefully and be certain that you understand exactly what is being asked.
5. **Answer** strictly on the basis of the passage and avoid selecting general answers.
6. **Note transition** from one idea to the next and examine the relationships among the different ideas or part of the passage.
7. **Concentrate** on the vocabulary items and puzzle out the meanings of the words you do not know in the context. Generally, options are tricky or some options are closely related. Therefore, analyse the questions and options carefully before answering.
8. **Select the answer** on the basis of the information provided in the passage. You are not expected to rely on outside knowledge of a particular topic. Avoid selecting answer which are not based on the passage.

Practice Exercise

Directions (Passages 1-10) *Read the passages given below and answer the questions that follow*

Passage 1

White cement is the basic raw material for producing cement tiles and cement paint which are used extensively in building construction. The main consumers of white cement are, therefore, cement tile and cement paint manufacturing units. These consumers, mostly in the small scale sector, are today facing a major crisis because of a significant increase in the price of white, cement during a short period.

The present annual licensed production capacity, of white and grey cement in the country is approximately 3.5 lakh tonnes. The average demand is 2-2.5 lakh tonnes. This means that there is idle capacity to the tune of one lakh tonnes or more. The price rise is, therefore not a phenomenon arising out of inadequate production capacity, but evidently because of artificial scarcity created by the manufacturers in their self-interest.

The main reason for the continuing spurt in cement price is its decontrol. As it is, there is stiff competition in the cement paint and tile manufacturing business. Any further price revision at this stage is bound to have a severe adverse impact on the market conditions. The government should take adequate steps to ensure that suitable controls are brought in. Else, it should allow import of cement.

1. Why is the price of cement going up?
 - a. Because the Government is controlling the quota
 - b. Because of export of white cement
 - c. Because of the large usage of white cement
 - d. None of the above
2. Which of the following statements is false according to the passage?
 - a. Price rise in white cement would increase the price of cement paint
 - b. White cement is a controlled product
 - c. Increase in price of white cement is not because of production problem
 - d. Price rise in white cement would upset cement tile market
3. What is the crisis being faced by the cement tile manufacturers as described in the passage?
 - a. White cement is priced very low
 - b. White cement is not of good quality
 - c. White cement usage is high
 - d. White cement prices are very high
4. Which of the following words has the same meaning as the word 'idle' as used in the passage?
 - a. Lazy
 - b. Clumsy
 - c. Large
 - d. Excess

5. Which of the following is correct according to the passage?
 - a. White cement is not used in the manufacture of paint
 - b. White cement forms a minor part of tile manufacturing
 - c. White cement is very important for tile manufacturing
 - d. White cement is used only for making paints
6. Which of the following words has the same meaning as the word 'artificial' as used in the passage?
 - a. Unnatural
 - b. Prolonged
 - c. Practical
 - d. Deliberate
7. What is the author's suggestion to bring down prices?
 - a. Government should control the white cement market
 - b. Production capacity should be increased
 - c. Usage of white cement in other areas should be reduced
 - d. Competition among manufacturers of cement paints and tiles should be reduced
8. Which of the following words has the opposite meaning as the word 'basic' as used in the passage?
 - a. Vital
 - b. Unimportant
 - c. Acidic
 - d. Last
9. Which of the following is correct according to the passage?
 - a. Cement production capacity is more than usage
 - b. Cement production capacity is less than usage
 - c. Cement production capacity is equal to usage
 - d. Cement production capacity is twice than usage
10. What can be presumed from the passage regarding foreign trade in cement?
 - a. The country is exporting cement at present
 - b. The country is importing cement at present
 - c. The country is exporting and importing cement
 - d. The country is neither exporting nor importing cement

Passage 2

The forces that generate conditions conducive to crime and riots are stronger in urban communities than in rural areas. Urban living is more anonymous living. It often releases the individual from community restraints more common in tradition-oriented societies. But more freedom from constraints and controls also provides greater freedom to deviate. And living in the more impersonalised, formally controlled urban society means that regulatory orders of conduct are often directed by distant bureaucrats. The police are strangers executing these prescriptions on an anonymous set of subjects. Minor offences in small town or village are often handled without resort to official police action. As disputable as such action may seem to be, it results in fewer recorded violations of the law compared to the

big cities. Although perhaps causing some decision-difficulties for the police in small town, formal and objective law enforcement is not always acceptable to villagers.

Urban areas with mass population, greater wealth, more commercial establishments and more products of our technology also provide more frequent opportunities for theft. Victims are impersonalised, property is insured, consumer goods in more abundance are vividly displayed and more portable. The crime rate increases despite formal moral education given in schools.

11. According to the passage, all of the following contribute to higher crime rates in urban areas except
 - a. vivid display of consumer goods
 - b. higher standard of living
 - c. urban impersonalised living
 - d. inadequate police force
12. Which of the following is a characteristic of an urban setting?
 - a. Unreported minor crimes
 - b. Deviation from freedom
 - c. Less forceful social control
 - d. Minimal opportunities of crime due to better law enforcement
13. The author's view of 'Traditional Societies' is best expressed by which of the following?
 - a. They provide less freedom for the individual in many circumstances
 - b. They have lower crime rates because of the moral teachings in schools
 - c. They provide inadequate freedom for personal movements and travel
 - d. They do not have adequate modern technology
14. People live under more social control in
 - a. formally controlled urban societies
 - b. the presence of the police authorities
 - c. an anonymous form of living
 - d. None of the above
15. It can be inferred from the passage that urban crime can be controlled by
 - a. greater emphasis on moral education
 - b. enforcement of law by distant bureaucrats
 - c. vivid display of expensive consumer goods
 - d. None of the above
16. Which of the following statements is true in the context of the passage?
 - a. The display of consumer goods is the main cause of crime
 - b. Lack of personal contacts increases crimes in urban areas
 - c. Small communities have more minor crimes than in urban centres
 - d. Urban crimes areas cannot be prevented
17. Which of the following statements is not true in the context of the passage?
 - a. Moral education imparted in schools is ineffective in checking crime rate
 - b. There is less freedom in the current society than in a traditional society

- c. Urban areas are thickly populated and commercialised.
- d. Anonymous living in urban areas may lead to a freedom to deviate from rules

18. According to the passage, the crime in small towns
 - a. is less frequently reported or dealt with officially
 - b. is brought well under control by distant bureaucrats
 - c. leads to an impersonalised style of living
 - d. is often dealt with objective law enforcement

Passage 3

A pioneering scheme has been started recently in Southampton of England's South coast to educate tourists who have been convicted of drunken driving.

The penalty for drunken driving might be the loss of a driving licence and a heavy fine. But under the new scheme, convicted drivers do not pay the fine. Instead they have to attend eight training; sessions one a week organised by the local authority probation service.

Designed to demonstrate the damage alcohol can do, the scheme was devised by senior probation officer John Cook. He said about a quarter of the people who came to him had a drink problem, but had not realised how much they were drinking. One way of getting the message across was to make the drivers pour out their usual ration of alcohol and then measure it. Almost everyone pours out not a single measure, but a double at least an example of how easy it is to have more than just one drink and to encourage other people to do the same.

The instructors on the course are giving clinical evidence of the effects of alcohol on the body and brain. The sober truth is that drinking badly affects driving skills, although the drinker might like to believe otherwise.

19. The Southampton scheme requires convicted drivers
 - a. to pay a heavy fine
 - b. to attend eight driving sessions-one a week
 - c. to undergo a probation service
 - d. to surrender their driving licence
20. John Cook-devised the scheme
 - a. as a demonstration technique for driving
 - b. to demonstrate the harmful effects of alcohol
 - c. to show that Southampton was concerned about drivers
 - d. to prove that alcohol does influence driving
21. The problem with a quarter of the people who went to John Cook was that they
 - a. did not want to stop drinking
 - b. were unaware of the fact that they could get drunk
 - c. would not admit that they had a drinking problem
 - d. did not know how much they were drinking
22. Most drivers start off with at least
 - a. a double measure
 - b. a single measure
 - c. a little less than a single measure
 - d. two doubles

23. The truth is that alcohol
- does not affect the body but only the brain
 - affects only the brain
 - affects the body and the brain
 - has no effect on the body or the brain

Passage 4

I consider myself something of an authority on apologies, because a quick temper has provided me with plenty of opportunities to make them. In one of my earliest memories, my mother is telling me don't look at the ground when you say, 'I'm sorry'. Hold your head up and look the person in the eye, so he'll know you mean it.

My mother thus, conveyed the first principle of successful apology : it must be direct. You must never pretend to be doing something else. You do not leaf through a sheaf of correspondence while apologising to a subordinate after blaming her for a mistake that turned out to be your fault.

You do not apologise to a hostess, whose guest of honour you insulted, by sending flowers the next day without mentioning your bad behaviour.

24. According to the author's mother, the best way to apologise is
- to say 'sorry' while looking at the ground
 - to look the person in the eye, even if you don't say 'sorry'
 - while saying 'I'm sorry' look the person in the eye
 - to hold your head up and avoid looking at the person
25. The successful way of apology is that it
- should not be mixed up with other activities
 - could be made carefully even when you are busy
 - should be hinted at indirectly to the person concerned
 - could be made seriously while doing other activities
26. You should apologise for your bad behaviour at a party by sending
- flowers to the guest of your hostess
 - flowers to your hostess at your leisure
 - flowers to your hostess with a note of apology
 - only a note of apology the next day
27. The phrase 'leaf through a book' means to .
- copy from a book
 - turn over the pages of a book quickly
 - read a book seriously
 - turnover a new leaf
28. The author considers himself to be an authority on apologies because
- his mother trained him how to apologise
 - he has read many books on how to apologise
 - he has apologised many a time
 - he has been offered apologies in many ways

Passage 5

Education is for life, not merely for a livelihood. So long as we are unmindful of this truth, the quality of our educational curriculum as well as that of our teachers and students is likely to remain inadequate. It is not enough for a society to have experts. It needs human beings who can think, feel and act generously, the kind of people who cannot be replaced by computers and robots. The great fault of our present age is its emphasis on efficiency at the cost of humanity.

29. When the author says that education is for life rather than for a livelihood, he means to say that
- education is a generally useful thing in life
 - the primary purpose of education is to train people to be proper human beings
 - education is useful for earning a living
 - education can enable one to become rich
30. The author says that is not enough for a society to have experts because
- experts are egocentric
 - experts do not have an overall view of things because of their being highly specialised
 - along with efficiency, educated people need to be sympathetic and sensitive to the needs of society
 - experts are highly eccentric people
31. The author is critical of the present educational system because it
- overemphasises efficiency
 - neglects social sciences
 - is science-oriented
 - is obsessed with computers
32. Proper human beings cannot be replaced by computers and robots because
- computers and robots are non-human
 - computers and robots react mechanically
 - only human beings can have, specialised knowledge
 - only proper human beings can think creatively and act generously
33. The main idea of the author in this passage is that
- educated people should be sympathetic towards human suffering
 - education should emphasise improvement in quality of life rather than efficiency
 - specialisation improves efficiency
 - to attain efficiency is the only goal of education

Passage 6

Grandchildren at university now how time passes!

I wonder if they or anyone else would be interested in what student life was like in the '30s ? Well, here goes....

The academic part of a student's life doesn't change all that much through the generations, but the style of social life

has changed. (For better or worse — who are we to say ?) The 'English Lit. more properly, Edinburgh University English Literature Society, met on Tuesday evening in the Non-Soc Hall, which is roundabout where the student shop is now. It was called the Non Soc Hall 'because the meetings there were of Non-Associated Societies the Associated Societies being high-and-mighty affairs with a long history, such as the Dialectic, Philomathic and Diagnostic, which, in those days, certainly didn't admit women.

34. The author of the passage feels nostalgic because
 - a. he doesn't belong to the present generation
 - b. he represents the past generation
 - c. he is conscious of time passing swiftly
 - d. things have changed since he was a student
35. The author observes that the academic life of a university
 - a. changes faster than the social life
 - b. does not change as fast as the social life
 - c. does not change because of a generation gap
 - d. changes abruptly after a long gap
36. When the author was a student at Edinburgh, English Literature Society used to meet
 - a. where it meets even now
 - b. where the Dialectic Society used to meet
 - c. near the place the student shop is located now
 - d. where the Diagnostic Society meets now
37. The English Literature Society was considered to be a Non-Associated Society because
 - a. its activities were deemed to be insignificant
 - b. it refused to be associated with any other society
 - c. it was an exclusive society of Department of English
 - d. it indulged in unconventional literary movements
38. The membership of the Associated Societies was
 - a. open to all students
 - b. restricted to students of History
 - c. restricted to students of Psychology
 - d. open to only men

Passage 7

The private sector has today reached a stage of development and expertise where it can make a massive contribution to the country's further economic development. The majority of India's entrepreneurs, large and small, are patriotic men who do not ask for special favours or large profits, nor do they seek monopolies or any concentration of wealth and power. What they want are the opportunities to exercise their initiative, their skills and their resources for the benefit of their stakeholders and above all, to be allowed to get on with the job. Yet, mistrust of the private sector, particularly in large-scale industry, has been such as seriously to impede economic growth in the sixties and it now threatens to make it impossible for it to meet its targets in the current plan.

If we, in private enterprise, are to play our legitimate role in the decade to come, it is clear to me that we must prove to Government, to Parliament and to the public in general that we deserve to be trusted. There is also the opposition from socialists in our country who, though opposed to violence and regimentation of communism, accept its economic policies in the mistaken belief that private enterprise is incompatible with the achievements of socialist goals and that even if it were, Indian businessmen and industrialists do not believe in those goals or are unwilling to make the necessary sacrifices.

39. The majority of Indian entrepreneurs want
 - a. to monopolise the trade
 - b. to concentrate wealth and power
 - c. to exploit the workers
 - d. the opportunity to use their talent and resources for the benefit of their stakeholders
40. The socialists oppose the private sector because
 - a. it exploits the workers
 - b. they think that entrepreneurs cannot achieve the socialist goals
 - c. they believe in Marxist ideology
 - d. they think that private sector should not be trusted
41. What impeded the economic growth in the sixties?
 - a. The non-availability of the raw materials
 - b. Strikes and lock-outs in the industries
 - c. The faulty planning by the Government
 - d. The mistrust of the private sector by the Government
42. The socialists think that Indian businessmen should not be trusted because
 - a. the businessmen do not believe in socialist goals and are unwilling to make any sacrifices
 - b. they only calculate their own profit
 - c. they exploit the economically weaker section of the society
 - d. they do not think about the general good of the society
43. Private sector can contribute to the economy because of
 - a. market driven economy
 - b. globalisation
 - c. disinvestment policy
 - d. the expertise it has acquired

Passage 8

One of the great delusions of modern times is the prevailing belief that we are more civilised than our ancestors. At no other period in the history of mankind has the word 'civilisation' been so often misused and misunderstood. It is not in the abundance of material alone that civilisation lies. Neither does it consist of the advance of scientific knowledge, however amazing that may be. The inventions and discoveries of science have undoubtedly brought unheard of blessings and comforts to us. But they are not civilisation. What we have failed to see is that civilisation is a special way of human behaviour, of thought and feeling. The essential quality of civilisation lies in the spirit of man, in his

attitude to himself, to his fellowmen and to life as a whole. Looking everywhere around us today, you will find that man has made no progress since the dawn of history, in his attitude towards his fellowmen. On all the highest pillars in cities of the world, you will find the figure of a conqueror or a general soldier. We know far more about our killers and destroyers than about our saviours and saints. The heroes of war are the heroes of the world.

44. What have scientific inventions given to mankind?
 - a. Wealth
 - b. Civilisation
 - c. Blessings and comforts
 - d. Destructive weapons
45. Does the writer think that we are more civilised than our ancestors?
 - a. Yes
 - b. No
 - c. There has been no perceptible change
 - d. The change, if any, cannot be determined
46. What is civilisation according to the author?
 - a. Possession of goods
 - b. Inventions and discoveries
 - c. Way of human behaviour, thought and feeling
 - d. Another form of affluence
47. Who are the heroes of the world?

a. Warriors	b. Saints
c. Prophets	d. Teachers
48. Who should be our heroes?
 - a. Saints and saviours
 - b. Conquerors
 - c. Great men of history
 - d. Politicians
49. A vital quality of civilisation depends upon
 - a. competitive spirit of man
 - b. attitude of man towards his fellowmen
 - c. man's desire to conquer nature
 - d. management of resources

Passage 9

In place of old pleasures demanding intelligence and personal initiative, we have vast organisations that provide us with ready-made distractions, which demand from pleasure-seekers, no personal participation and no intellectual effort of any sort. To the interminable democracies of the world, a million cinemas bring the same stale bladerdash. There have always been fourth-rate, writers and dramatists; but their works in the past, quickly died without getting beyond the boundaries of the city or the country in which they appeared. Today, the inventions of the scenario-writer go out from Los Angeles across the whole world.

Countless audiences soak passively in the tepid bath of nonsense. No mental effort is demanded of them, no participation; they need only sit and keep their eyes open.

50. According to this passage, most cinemas
 - a. deal with the familiar uninteresting family dramas
 - b. tend to be didactic and moralistic
 - c. bring the images of the same old adventurous activities
 - d. bring nothing..but some dull, nonsensical talk
51. The author says that the fourth-rate writers and dramatists
 - a. never existed, in old times
 - b. wrote novels and plays which are not of permanent value
 - c. are mushrooming in modern times unlike, in the past
 - d. succeed easily in the modern times
52. According to this passage, the modern audience
 - a. is cosmopolitan in its outlook
 - b. is very discriminating
 - c. never falls asleep in a cinema hall
 - d. lacks individual initiative and refuses to exercise the mind
53. To indulge in their favourite pastime, our ancestors
 - a. exercised some intelligence and individual initiative
 - b. enjoyed nonsensical works
 - c. never moved out of their familiar environment
 - d. formed recreational clubs
54. The author thinks that the bane of modern times is that
 - a. physical exercise has been given a go-by
 - b. the trash travels very fast
 - c. people are taking active interest in mindless pleasures
 - d. the cheap ready-made distractions have become more and more pervasive

Passage 10

Those of us who already possess knives and use them as a matter of course at our meals can hardly understand the longing of an infant to be given the freedom of so perilous an instrument. Man has been defined as a tool-using animal, and there is no another tool that appeals to the imagination so strongly as a knife. It is through long months and year a forbidden thing and all the more fascinating on that count. There is no glory in using a spoon. There is no honour in holding a fork in the right hand and in taking up on it little squares of meat that have been cut with a knife by some more privileged, hand. Fork and spoon are little more than an extension of the fingers and a spoon, at least, is so safe that it can be left in the hands of an infant in the cradle. But a knife is a danger against which constant warning is necessary-something out of reach and waiting as a prize at the end of a long avenue of years.

55. The 'privileged hand' in this passage refers to
 - a. the spoon
 - b. expert hand
 - c. the adults
 - d. the children

56. To the child, there is no glory in handling a spoon because
- the child does not find the spoon attractive
 - for the child it is nothing but the extension of fingers
 - it is an extremely safe instrument
 - it is not as exciting as a fork
57. Adults cannot understand why a child finds knives so attractive because they
- use knives routinely at the dining table
 - have forgotten their childhood experiences
 - use the knife to cut tough vegetables
 - wield power at the time of meals
58. The child
- longs to be tool-using animal
 - desires the freedom to use the perilous instrument
 - wants to use the knife because he wants to become a soldier
 - dreams of crime and adventure
59. The knife fascinates a child all the more because it is
- out of his reach
 - a precious prize
 - a strong weapon to defend oneself with
 - a very attractive toy

BITSAT Archives

India is a country which has been subjected to foreign invasions since the dawn of Indian history. The fertile plains of India have been attracting avaricious tribals from all over the world. Long back the Aryans from Central Asia invaded India and settled down permanently in this beautiful land where food and fodder were available in plenty. After a chain of invasions from the bordering countries through land routes, the European nations, including the British, finally came to India to exploit her rich resources. The Englishmen came to India as traders, but stealthily became her masters. India became the 'brightest Jewel' in the British diadem. They proclaimed to civilise her and started to exploit her. Neither the imperialist might, nor the treachery of some of her sons, nor the treachery of some of her sons, nor the nerve-racking exploitation could curb the indomitable urge for freedom of the people who bid defiance to time. They fought and fought heroically; they never submitted.

Their struggle for independence is an inspiring and exhilarating story. It is a story not only of firm determination

and will, but also of sacrifice and suffering, a story of heroism and courage that happens in all revolutionaries. [2006]

- Why did the Aryans settle permanently in India?
 - Because here food and fodder were available in plenty
 - Because they invaded India
 - Because here food was available in plenty
 - Because here fodder was available in plenty
- British came to India
 - to exploit her rich resources
 - to become her master
 - to civilize her
 - None of the above
- The Indians indomitable urge for freedom could be curbed neither
 - by the nerve-racking exploitation of the British
 - by the treachery of some of her sons
 - by the imperialist might
 - All of the above

Rearrangement

One of the questions set in the objective test in English relates to rearrangement. A student is required to rearrange the jumbled parts of a sentence/paragraph so as to form a proper sentence. In fact, there are no hard and fast rules for this kind of test. Only sound knowledge of English language and constant practice may enable a student to solve such questions.

The questions based on rearrangement are usually of three types.

In the **first type** of questions, some parts of a sentence are jumbled up. You are required to rearrange these parts which are labelled P, Q, R, and S so as to produce the correct sentence.

In the **second type** of questions, a paragraph consisting of six sentences is given. The first and the last sentences are given and the middle four sentences are removed and jumbled up. You are required to find the proper order of these four sentences so as to form a coherent paragraph.

In the **third type** of questions, some sentences are given. These sentences form a coherent paragraph when they are arranged in proper order. You are required to rearrange these sentences to form a coherent paragraph and then answer the given questions.

Some Useful Tips

1. First, look for the part which may be the beginning part of the sentence. The part must have a word that could act as the subject of a sentence.
2. Usually, the subject of a sentence is either a noun or a pronoun.
3. Sometimes a sentence can also start with an adverb, a gerund or a conjunction. Keep an eye on such words also.
4. Try to find out the tense of the given sentence. It will also help you in arranging the parts in a proper order.
5. While choosing the proper order of sentences in a paragraph, try to find out the logical pairs.
6. Sometimes a chronological order can also be set. It will make your work very easy.
7. You can also select the correct option from among the given alternatives by eliminating the wrong options.

Practice Exercise

Directions (Q. Nos. 1-19) *Some parts of each of the following sentences, have been jumbled up. You are required to choose the correct sequence to rearrange these parts which are labelled P, Q, R, S so as to produce the correct sentence.*

1. The only time when this dynamic cricketer
P

was on the 1979 tour of England failed with
Q R

the bat the tag of an all-rounder did not fit him
S

The proper sequence should be

- a. S P R Q b. P R S Q c. S R P Q d. S Q P R

2. Kapil left in an aeroplane after reading a sailing magazine
P Q

had decided to build his own boat nine years earlier
R S

The proper sequence should be

- a. P R Q S b. R S Q P c. R Q P S d. P S R Q

3. When it becomes an honour of a lifetime
P

in recognition of their great performance illustrious
Q R

personalities win an award
S

The proper sequence should be

- a. R P Q S b. P Q R S c. Q R S P d. S Q R P

4. The newspaper reported that according to one estimate
P

and many of them assume epidemic proportions most
Q

illness in India are related to water-borne diseases
R S

The proper sequence should be

- a. P R Q S b. P R S Q c. R Q S P d. R Q P S

5. The zoologist says that having been bitten by them
P

once trembled to make a second attempt at catching
Q R

the snakes the snake-charmers
S

The proper sequence should be

- a. P R Q S b. S Q P R
c. R P Q S d. P S Q R

6. If you had told me I would not have given it to you
P

that you had already bought this book as a birthday
Q R S

present

The proper sequence should be

- a. Q R P S b. P Q R S c. S P Q R d. S R Q P

7. All precautionary measures were taken to prevent the capture of booths during the election by the
P Q

Government by the terrorists
R S

The proper sequence should be

- a. S P R Q b. Q S P R c. R P S Q d. R Q S P

8. The Government has assured the people that in the Kargil operation who have sacrificed their lives will be
P Q

properly looked after the families of all those
R S

soldiers.

The proper sequence should be

- a. P S R Q b. S Q P R c. S R Q P d. S P R Q

9. All through collecting and storing up food the long
P

warm summer days an ant was very busy for the
Q R S

winter.

The proper sequence should be

- a. S R Q P b. Q P S R c. Q R P S d. R S Q P

10. Standing carelessly with his sword, the fat major
P

held horizontally behind him and with his legs far apart
Q R

looked after the receding horseman and laughed
S

The proper sequence should be

- a. P Q S R b. Q P R S c. P Q R S d. P R S Q

11. Since life has now become intensely competitive
P

not only by the grades he obtains but also by his skill
Q

of observation and logical reasoning we judge a
R

person's intellectual worth
S

The proper sequence should be

- a. S Q R P b. P S R Q
c. P Q R S d. P S Q R

12. By the time known to everyone we appeared on the
P Q
scene he had already become an institution
R
who had ever stayed at Anand Bhawan
S

The proper sequence should be

- a. Q P R S b. P S Q R c. Q R P S d. R S Q P

13. I can guarantee as a medical representative
P
without any doubt for the post for which he has
Q R
applied that this candidate will be successful
S

The proper sequence should be

- a. S P R Q b. S R Q P c. P S R Q d. Q S P R

14. Most of our small farmers do not get a fair return
P
on the sale of their farm-products on their investments
Q
in back-breaking labour and high cost of seeds
R
and fertilizers
S

The proper sequence should be

- a. P Q R S b. P Q S R c. P R Q S d. P R S Q

15. The guide said that nowhere in the world
P
a fairer building you will find than the Taj Mahal
Q R S

The proper sequence should be

- a. R Q P S b. P R Q S c. P S Q R d. R Q S P

16. The students knew that to control unruly students
P
in the college administration our new Principal took a
Q R
number of strong measures
S

The proper sequence should be

- a. R S P Q b. R S Q P c. P Q R S d. Q R P S

17. According to the standard big-bang theory, in a moment
P
of infinite temperature the universe came into existence
Q
some ten to fifteen billion years ago and density.
R S

The proper sequence should be

- a. P S R Q b. Q P S R
c. R P Q S d. Q S P R

18. Nearly to NTPC's environmental activities bloom
P
around NTPC's power plants and stand lush green
Q R
testimony one and a half crore trees.
S

The proper sequence should be

- a. P R Q S b. S Q R P c. P Q R S d. S R Q P

19. Animal welfare experts to demolish illegal structures
P
have condemned by the Forest Department the use
Q R S
of elephants.

The proper sequence should be

- a. Q S R P b. R P Q S c. Q P R S d. R S Q P

Directions (Q. Nos. 20-28) *In the following items, each paragraph consists of six sentences. The first and the sixth sentences are given in the beginning and labelled S₁ and S₆ respectively. The middle four sentences in each have been removed and jumbled up. These are labelled P, Q, R and S. You are required to find the proper order for the four sentences and mark accordingly.*

20. S₁ : Yes, a mirage can be photographed.

S₆ : That kind of mirage obviously cannot be photographed.

P : That is hallucination.

Q : Anything reflected by the lens of the human eye will naturally be picked up by the photographic lens.

R : Sometimes, however, a person imagines he is seeing something but actually he is not.

S : The image, of course, will be hazy and shimmering because of refraction of light.

- a. S P R Q b. Q R P S c. P S Q R d. Q S R P

21. S₁ : One of the greatest curses of the world is the belief in the necessity of poverty.

S₆ : We have been poor in the very midst of abundance, simply because of our own blighting limiting thought.

P : There need not be poor person on the planet.

Q : But there was no poverty, no want, no lack, in the creator's plan for man.

R : Most people have a strong conviction that some must necessarily be poor, that they were made to be poor.

S : The Earth is full of resources which we have scarcely yet touched.

- a. S P Q R b. R S P Q
c. R Q P S d. P Q S R

22. S_1 : There is nothing strange in the fact that so many foreign students should wish to learn English.
 S_6 : This key will open to him whatever is valuable in the literature of the world.
 P : If any valuable book is written in another language an English translation of it is sure to be speedily published.
 Q : Anyone who masters the English tongue acquires a key.
 R : Most books found to be generally useful are written in English.
 S : The English speaking want no monopoly of knowledge.
 a. P S Q R b. S Q R P c. R P S Q d. P Q S R
23. S_1 : Much of our adult behaviour and our attitudes are determined by our upbringing.
 S_6 : Psychologists have studied these forces in depth.
 P : But the process does not stop here.
 Q : In particular by the effects of that small part of society which is our family.
 R : As we grow we are constantly and increasingly affected by new forces such as the social pressure of our friends and the larger world of society.
 S : The family and our early life have profound effect on our later life.
 a. S R P Q b. P R S Q c. Q P S R d. Q S P R
24. S_1 : Many people, who are hit on the head and suffer from brain injury, temporarily lose memory of things happening to them a few hour or few days before the accident.
 S_6 : It is as if the memories of this time do not have time to become established in the permanent long memory.
 P : The first ones to come back are usually older memories.
 Q : After a while the memories begin to return.
 R : Then other items appear.
 S : But there is always a short period of a few minutes just before the accident, which remains a complete blank.
 a. P Q R S b. S R Q P c. Q P R S d. Q R P S
25. S_1 : Chanakya, by his foresight and strength of character, built up the Mauryan Empire.
 S_6 : It is not true as some people said that Sardar Patel was not particular about the means as long as he achieved his end.
 P : They were men of iron.
 Q : Therefore, they were impervious to criticism and had implicit confidence in themselves.
 R : Both of them were guided by stern realism and would tolerate no deviation from the objectives which they pursued relentlessly.
 S : Similarly, Patel refashioned a compact India out of the fragments left by the British.
 a. S Q R P b. S R Q P c. S R P Q d. P Q S R
26. S_1 : The spiritual training of the boys was a much more difficult training.
 S_6 : And I held that this was an essential part of the training of the young and that all training without culture of the spirit was of no use, and might be even harmful.
 P : I had realised that the training of the spirit was a thing in itself.
 Q : Of course, I believed that every student should be acquainted with the elements of his own religion and have a general knowledge of his own scriptures.
 R : I relied little on religious books for spiritual training.
 S : To develop the spirit is to build character and to enable one to work towards a knowledge of God and self-realisation.
 a. P Q S R b. R Q S P c. R Q P S d. P R S Q
27. S_1 : The word 'victory' generally reminds us of wars and conquerors like Alexander and Napoleon.
 S_6 : The victories of peace are more lasting and useful to humanity than the victories of war.
 P : Thousands of people are killed and hundreds of towns and cities are destroyed.
 Q : But the victory associated with a war comes after so much of destruction.
 R : In this category, we may include the achievements of scientists and scholars, statesmen and social reformers and the like.
 S : However, there is another type of victory which is creative and constructive.
 a. P R Q S b. S P Q R c. Q P S R d. R P Q S
28. S_1 : The Arabs who are not in cities live in the desert all the year round.
 S_6 : An Arab loves his horse almost as much as he loves his wife and children.
 P : They have the finest horses in the world.
 Q : So they can easily move from one place to another.
 R : These desert Arabs eat ripe, sweet figs and also the dates that grow upon the palm trees.
 S : They live in tents that can be put up and taken down easily.
 a. R S P Q b. S Q R P
 c. P Q R S d. Q R S P

Fill in the Blanks

Question based on Fill in the blanks or Sentence Completion are designed to test the comprehension ability as well as the knowledge of the meaning of the words required to be filled in. The candidate is asked to select the best of the alternatives given below a sentence.

A word of caution may be put in here for the benefit of the students. Before attempting this section they must go through the plethora of words to guide them in choice of selecting the best of the alternatives.

These questions are usually of two types.

In the **first type** of questions, a sentence is given with a blank space. Below the sentence, four alternatives are suggested for the blank space. You are required to select the alternative which makes the sentence meaningfully complete.

In the **second type** of questions, a sentence is given with two blank spaces. Below the sentence, four pairs of words are suggested for the blank spaces. You are required to select the alternative which has the correct pair of words required to be filled in.

Some Useful Tips

1. First read the sentence and try to find out its meaning.
2. Go through all the given alternatives before selecting the answer.
3. Select the word which makes the sentence meaningful and grammatically correct.
4. Try to find out which part of speech is required to fill in the blank. It will make your choice very easy.
5. Sometimes more than one option may seem to be correct. In such case, choose your answer in the context of the sentence. The answer must provide a proper sense and must belong to the required grammatical class or part of speech.
6. In case of double blanks, be careful not to choose the alternative which has only one correct word. Make sure that the alternative must have the words that can fill both the blank spaces appropriately.
7. Eliminating the wrong options will also help you in selecting the right answer.

Practice Exercise

1. The pilot was injured; he died within half an hour.
a. seriously b. fatally
c. fatefully d. vitally
2. His..... directions misled us; we did not know which road to take.
a. complex b. obscure
c. mingled d. vague
3. He was very friendly with the press and it really him even for what he did not achieve.
a. praised b. lionised
c. appreciated d. highlighted
4. These essays are intellectually and represent various levels of complexity.
a. revealing b. modern
c. superior d. demanding
5. The soldiers were instructed to ... restraint and handle the situation peacefully.
a. exercise b. control
c. prevent d. enforce
6. Since, one cannot read every book, one should be content with making a selection.
a. normal b. standard
c. moderate d. judicious
7. There has been a lack of efficiency in all the crucial areas of the working of Public Sector Undertakings.
a. positive b. surprising
c. conspicuous d. stimulative
8. The Managing Director treated the employees to a lunch at an expensive hotel.
a. precious b. thriving
c. stupendous d. sumptuous
9. Satish was with a natural talent for music.
a. given b. found
c. endowed d. entrusted
10. She always insisted on the need to between ends and means.
a. analyse b. define
c. distribute d. distinguish
11. If greater security measures had been taken the tragedy might have been
a. removed
b. repeated
c. restrained
d. averted
12. A politician's speech must be read the lines, it may have a double
a. behind; edge b. between; meaning
c. among; ends d. beyond; face
13. Those who live in houses should not throw at others.
a. big, abuse b. own, challenges
c. stone, bricks d. glass, stones
14. I write a letter to you tentatively the dates of the programme.
a. involving b. urging
c. guiding d. indicating
15. Contemporary economic development differs..... from the Industrial Revolution of the 19th century.
a. naturally b. usually
c. literally d. markedly
16. Ravi had to drop his plan of going to picnic as he had certain to meet during that period.
a. preparations b. observations
c. urgencies d. commitments
17. It was hot that day and the cable suffered the brunt of the heat.
a. treacherously
b. acceptably
c. unfailingly
d. unbelievably
18. eye-witness, the news reporter gave a graphic description of how fire broke out.
a. Reporting b. Observing
c. Seeing d. Quoting
19. He gave me an additional of ₹ 100 a month by of the commissioner.
a. allowance; permission
b. pay; allowance
c. payment; agreement
d. salary; admittance
20. There is no glory in war the blood it....
a. considering; sheds b. comparing; spills
c. worth; costs d. thinking; demands
21. The Director has me to a speech for him.
a. notified; do
b. demanded; prepare
c. entrusted; write
d. commissioned; draft
22. I will come tomorrow I hear to the
a. unless; contrary
b. until; contradictory
c. except; oppose
d. despite; otherwise
23. The children are so , their parents are thinking of sending them to a school.
a. small; high
b. naughty; neighbouring
c. misruled; lodging
d. unruly; boarding

24. Only people are after death.
 a. vicious; condemned
 b. virile; forgotten
 c. virtuous; remembered
 d. virulent; glorified
25. The Secretary the society's funds, he was dismissed.
 a. robbed, thus
 b. pirated, therefore
 c. misplaced, and
 d. embezzelled, therefore
26. His life consists of..... of drinking punctuated by periods of drunken sleep.
 a. barrels
 b. bouts
 c. bowls
 d. pints
27. He lost the match easily because he had played a five set match in the earlier round.
 a. sensational
 b. gruelling
 c. wonderful
 d. controversial

BITSAT Archives

1. Our company signed a profitable last month. [2014]
a. issue b. agenda
c. deal d. paper
2. When Indians from the South move North, they find certain aspects of life quite from their own. [2012]
a. strange b. separate
c. different d. divergent
3. The sky is overcast, we the storm will soon burst. [2012]
a. expect b. hope
c. trust d. suspect
4. We must our students on subjects like health and sanitation besides the usual subjects. [2010]
a. learn b. teach
c. insist d. educate

VERBAL

Analogy

Analogy means similarity or correspondence i.e. having similar features. The questions based on analogy, a particular relationship is given and another similar relationship has to be identified from the alternatives provided. Questions based on analogy are set-up to test a candidate's overall knowledge, power of reasoning and ability to think.

These types of questions cover every types of relationships that one can think. There are many ways of establishing a relationship like quantity and unit, worker and tools, cause and effect, word-synonym, word-antonym, country and capital, state and capital, country and currency, animal and the young ones (kid), male and female, animals and their resting places, games and places of playing, occupation their working place and their work.

Here, some relationships are given, which are useful for solving questions based on analogy

Country	Capital	Currency
Bangladesh	Dhaka	Taka
Iraq	Baghdad	Dinar
China	Beijing	Yuan
India	New Delhi	Rupee
UK	London	Pound
Japan	Tokyo	Yen
USA	Washington DC	Dollar
Russia	Moscow	Rouble
Greece	Athens	Euro

Occupation	Working Place	Working
Lawyer	Court	Legal Practice
Servant	House	Service
Beautician	Parlour	Make up
Mechanic	Garage	Repairing
Waiter	Restaurant	Serving
Teacher	School	Teaching
Chef	Kitchen	Cooking
Sailor	Ship	Sailing

States of India	Capital
Sikkim	Gangtok
West Bengal	Kolkata
Goa	Panaji
Tamil Nadu	Chennai
Odisha	Bhubaneswar
Bihar	Patna

Male	Female
Dog	Bitch
Horse	Mare
Bull	Cow
Cock	Hen
Son	Daughter
Brother	Sister

Practice Exercise

1. Major is related Lieutenant in the same way as Squadron Leader is related to?.....
 a. Group Captain b. Flying Attendant
 c. Flying Officer d. Pilot Officer
 e. Driver
2. Kilogram is related to Quintal in the same way as Paisa is related to ?
 a. Rupee b. Coin
 c. Wealth d. Money
 e. Dollar
3. Roentgen is related to X-rays in the same way as Becquerel is related to ?
 a. Uranium b. Radioactivity
 c. Fission d. Superconductivity
 e. None of these
4. Jade is related to Green in the same way as Garnet is related to?.....
 a. Blue b. Orange
 c. Red d. Yellow
 e. White
5. Victory is related to Happiness in the same way as Failure is related to?.....
 a. Defeat b. Anger
 c. Frustration d. Sandness
6. Food is to Fad as Religion is to?.....
 a. Crucification b. Notion
 c. Superstition d. Mythology
 e. Psychology
7. Glutton is related to Eat in the same way as Garrulous is related to?.....
 a. Talk b. Walk
 c. Laugh d. Travel
 e. Run
8. Vitro is related to Glass in the same way as Ligno is related to?.....
 a. Marble b. Metal
 c. Rock d. Wood
 e. Gold
9. Buffalo is to Leather as Llama is to?.....
 a. Wool b. Meat
 c. Silk d. Fur
 e. Linen
10. Cell is related to Tissue in the same way as Tissue is related to?.....
 a. Object b. Organ
 c. Limb d. None of these

11. Prairies is to North America as Downs is to?.....
 a. Europe b. Australia
 c. Africa d. India
 e. Nepal

Directions (Q. Nos. 12-14) *In each of the following questions, there is certain relationship between two given words on one side of (::) and one word is given on another side of (::) while another word is to be selected from the given alternatives having the same relationship with the word, as the words of the given pair bear. Choose the correct alternative.*

12. Cougar : South America :: Okapi : ?
 a. India b. Central Africa
 c. North America d. Pakistan
 e. Australia
13. Bow : Arrow :: Pistol : ?
 a. Bullet b. Gun
 c. Shoot d. Rifle
 e. Revolver
14. Cobbler : Leather :: Carpenter : ?
 a. Furniture b. Wood
 c. Hammer d. Chair
 e. Wool

Directions (Q. Nos.15-19) *The following questions consists of two words each that have a certain relationship to each other, followed by four lettered pairs of words. Select the lettered pair that has the same relationship as the original pair of words.*

15. War : Destruction
 a. Fire : Burn b. Court : Justice
 c. Water : Drown d. Food : Hunger
16. Banyan tree : Proproots
 a. Potato : Tuber b. Climbers : Tendrils
 c. Ginger : Stem d. Spinach : Root
17. Vaseline : Petrol
 a. Tea : Leaves b. Plant : Tree
 c. Butter : Ghee d. Cream : Milk
18. Preamble : Constitution
 a. Word : Dictionary b. Contents : Magazine
 c. Explanation : Poetry d. Preface : Book
19. Garbage : Squalor
 a. Poor : Hunger
 b. Diamond : Magmticence
 c. Colour : Brush
 d. Dirtiness : Cleanliness

Directions (Q. Nos. 31-42) Find the related words analogy from the given alternatives.

31. Godan : Premchand : : Guide : ?
a. RK Narayan
b. KR Narayan
c. Premchand
d. MK Gandhi
32. WHO : Geneva : : IMF : ?
a. New York
b. Paris
c. Geneva
d. Washington DC
33. Distance : Scalar quantity : : Velocity : ?
a. Scalar quantity
b. Vector quantity
c. Speed $\times$ Time
d. Graph
34. Bihu : Asom : : Garba : ?
a. Uttar Pradesh
b. Rajasthan
c. Punjab
d. Gujarat

35. National tree : Banyan :: National song : ?

- Jan Gan Man
- Vande Matram
- Inqulab Zindabad
- Sare Jaha Se Acha

36. Raj Ghat : Mahatma Gandhi :: Shanti Van : ?
a. Indira Gandhi
b. Subhash Chandra Bose
c. Rajiv Gandhi
d. Jawahar Lal Nehru
37. Japan : Yen :: UK : ?
a. Rial b. Dollar c. Pound d. Yuan
38. Bihar : Patna :: Nagaland : ?
a. Kohima b. Gangtok
c. Lucknow d. Chandigarh
39. Red : Violence :: White : ?
a. Lotus b. Peace
c. Colour d. Cleanliness
40. Wish : Desire :: Refuse : ?
a. Accept b. Rebuff
c. Abuse d. Deny
41. Botany : Plants :: Entomology : ?
a. Snakes b. Germs
c. Birds d. Insects
42. virology : virus :: Semantics : ?
a. Compilers b. Bacteria
c. Greeks d. Language

Answer with Solutions

1. (c) Major and Squadron Leader are equivalent ranks in Army and Air Force respectively and so are Lieutenant and Flying Officer.
2. (a) Second is bigger unit than the first, though both are used to measure the same quantity, 100 kilograms = 1 quintal and 100 paise = 1 rupee.
3. (b) Roentgen discovered X-rays. Similarly, Becquerel discovered radioactivity.
4. (c) Jade is a green precious stone and garnet is a red precious stone.
5. (c) Second is the result of the first.
6. (c) Second is the name given to wrong notions about the first.
7. (a) Glutton is one who eats too much. Garrulous is one who talks too much.
8. (d) Vitro means 'related to glass' and Ligno means 'related to wood'.
9. (a) Second is a product obtained from the first.
10. (b) Tissue is made up of cell and organ is made up of Tissue.
11. (b) The grasslands of North America are known as Prairies and those of Australia are called Downs.
12. (b) As, Cougar is found in South America. Similarly, Okapi is found in Central Africa.
13. (a) As, Arrow is released from Bow. Similarly, Bullet is released from Pistol.
14. (b) As, Cobbler uses Leather to make shoes. Similarly, Carpenter uses Wood to make furniture.
15. (a) First causes the second.
16. (b) Second provides support to the first.
17. (d) First is extracted from the second.
18. (d) Preamble is the introduction to the Constitution. Similarly, preface is the introduction to a book.
19. (b) Second is the property of first.
20. (d) Nurse receives instructions from the doctor and follower receives the instructions from leader.
21. (c) The fire Burns due to presence of Oxygen and the fire Extinguishes due to Carbon dioxide.
22. (d) Pollution is the result of Smoke. Similarly, Destruction is the result of War.
23. (b) As, Tailor makes Dress. Similarly, Carpenter makes Furniture.
24. (c) Scalpel is used by surgeon during operation, in the same way, sculptor uses his chisel for crating sculptures.
25. (a) The Hoofs of an animal such as a Horse are the hard lower parts of its feet. In the same way, Foothills are the lower parts of Mountains.
26. (b) Sailor is judge the direction through Compass same as Doctor is judge the breathing and heart beats through Stethoscope.
27. (b) Cytology is the science of study Cells. In the same way, Entomology is the science of study of Insects.
28. (b) As, Chair is made of Wood. Similarly, Mirror is made of Glass.
29. (c) As, Nuts are covered with Bolts. Similarly, naked is covered with cloths.
30. (c) Book is written by Author. Similarly, Symphony is composed by composer.
31. (a) Godan is written by Premchand. In the same manner, Guide is the book written by RK narayan.
32. (d) The headquarter of WHO is in Geneva, Similarly, the headquarter of IMF is in Washington DC.
33. (b) Distance is a scalar quantity as it has no direction. In the same way, velocity is a vector quantity as it has unit as well as direction both.
34. (d) Bihu is the dance from of Asom. In the same way, dance from of Gujarat is Garba.
35. (b) National tree of India is Banyan. In the same way, National Song of India is Vande Matram.
36. (d) Raj Ghat belongs to Mahatma Gandhi. In the same way, Shanti van belongs to Jawahar Lal Nehru.
37. (c) Yen is the currency of Japan. In the same way, Pound is the currency of UK.
38. (a) Patna is the capital of Bihar. In the same way, Kohima is the capital of Nagaland.
39. (b) Red is the symbol of violence. In the same way, white is the symbol of peace.
40. (d) Wish is the higher intensity of desire. In the same way, Refuse is the higher intensity of deny.
41. (d) Botany is the study of plants. In the same way, Entomology is the study of Insects.
42. (d) Virology is the scientific study of virus. In the same way, semantics is the study of meanings of words and phrasemes in a language.

2

Classification

Classification means 'to assort the items' of a given group on the basis of a certain common quality they possess and then spot the stranger or 'odd one out'.

These questions are based on words, letters and numerals. In these types of problems, we consider the defining quality of particular things. In these questions, four or five elements are given, out of which one does not belong to the group. You are required to find the 'odd one'.

Classification problems are divided into the following types

1. Number Classification

In number classification, there is a similarity among the numbers or groups of numbers.

The number classification is generally based on similarities like

- Square and square root of a number
- Cube and cube root of a number
- Even and odd number
- Prime number
- Divisibility test of a number etc.

2. Alphabet Classification

In alphabet classification, there is a similarity or pattern among the alphabets in the group and the candidate has to identify the pattern and select the one which does not follow the common pattern in the group.

The relationship among the alphabets is based on the following

- Position of alphabets
- Vowel and consonant
- Reverse order of alphabets
- Addition or multiplication of position etc.

3. Word Classification

In word classification, the candidate is given a group of words which are related to one another in a particular manner. The candidate has to identify the odd word that does not belong to the group.

The relationship among the word classification is generally based on the following

- Synonym of word
- Antonym of word etc.

34. a. 2 : 4 b. 4 : 8
 c. 6 : 18 d. 8 : 32
35. a. 3 : 12
 b. 4 : 20
 c. 6 : 42
 d. 7 : 63

Answer with Solutions

- (d) In all the groups, there is a gap of two letters between first and second as well as between second and third letters.
- (b) In all other groups, the middle letter is a vowel.
- (d) In all other groups, the first two letters are alternate letters of the alphabet, while second and third letters occupy the same positions from the beginning and the end of the alphabet respectively.
- (b) In all other groups, the first second and third letters are respectively moved one, five and one step forward to obtain second, third and fourth letters respectively.
- (e) In all other groups, first and second as well as fourth and third letters are alternate. Also, the first and third letters occupy the same positions from the beginning and end of the alphabet, respectively.
- (c) In all other groups, first and second as well as third and fourth letters are consecutive and the third letter occupies the same position from Z backward as the first occupies from A onward.
- (d) In all other groups, the third letter is small and a vowel.
- (d) Except (d), all other groups contains only small letter.
- (d) Except Ounce, others are currencies of different countries.
- (c) Jackfruit is a vegetable while others are fruits.
- (c) Except Valley, all other are the elevated features.
- (d) Except Exercising, all others are different forms of exercising.
- (b) Except Friend, all others are denote blood relations.
- (d) All except Mathematics are branches of Mathematics.
- (e) All except Korea are European countries, while Korea is an Asian country.
- (e) All except Hireling are young ones of animals.
- (e) All others can be drawn on paper.
- (e) All except Acre, are units of measuring distance, while acre is a unit of area.
- (c) All except Bear, belong to the cat family.
- (b) In other pairs, first is a product made from the second.
- (d) In other pairs, second is prepared by the first.
- (b) In all other pairs, the two words are antonyms of each other.
- (e) In other pairs, first denotes the function performed by the second.
- (d) In other pairs, first is used to hold the second.
- (a) In other pairs, second is the female of the first.
- (b) Each of the numbers except 27, is a prime number.
- (e) 7 is the only prime number in the group.
- (d) Each of the numbers except 28, is divisible by 3.
- (c) Each of the numbers except 63, is a prime number.
- (d) Except 667, sum of digits is 20.
- (b) In all other pairs, second number is 9 more than the first.
- (c) In all other pairs, second number is the cube of the first.
- (d) All other pairs consist of odd numbers only.
- (a) In all other pairs, $\frac{(1\text{st number})^2}{2} = 2\text{nd number}$.
- (d) In all other pairs, $(1\text{st number}) \times (1\text{st number} + 1) = 2\text{nd number}$.

3

Series Completion

Series is a sequential order of letters, numbers or both arranged in such a way that each term in the series is obtained according to some specific rules. These rules can be based on mathematical operations, place of letters in alphabetical order etc.

In questions on series, a specified sequence/order of letters, numbers or a combination of both is given where one of the term (letter/number/letter and number) of the series is missing either at the end of the series or in between the series.

The candidate is required to identify the pattern involved in the formation of series and accordingly find the missing term to complete the series. Also, there may be some questions where one of the term in the series is incorrect and the candidate is required to find out that term of the series by identifying the pattern involved in the formation of series.

There is no set pattern and each question may follow a different pattern or sequential arrangement of letters or digits, which you have to detect using your common sense and reasoning ability.

Types of series covered in this chapter are as follows

1. Number Series

In number series, the numbers are arranged in a particular pattern based on some mathematical or logical operations.

The pattern of number series is based on following

- Square and square roots of a number
- Cube and cube roots of a number
- Arithmetic operations (like addition, subtraction, division, multiplication)
- Prime number
- Even and odd numbers
- A combination of above relations

The questions are asked in two formats

1. Find the missing term
2. Find the wrong term

Basic Approach to Number series

The best way/method of approaching the number series question is as follows.

- (i) Firstly, analyse the difference between terms.
- (ii) If the difference is constant, it is a constant difference series.
- (iii) If the difference is increasing or decreasing fastly, then try the square series approach.
- (iv) If the increase is very much and it is not a square series, then try the cube series approach.
- (v) If there is no constant increasing or decreasing difference, then try product series approach.
- (vi) If the number obtained are same, then it is a product series.

2. Alphabet Series

In alphabet series, letters of english alphabet are arranged in a particular pattern like reverse order of letters, position of letters, skipping of letters etc.

The following problem can be solved by remembering the position of the letters in the alphabetical order from forward and backward direction.

Forward	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26
Letters	A	B	C	D	E	F	G	H	I	J	K	L	M	N	O	P	Q	R	S	T	U	V	W	X	Y	Z
Backward	26	25	24	23	22	21	20	19	18	17	16	15	14	13	12	11	10	9	8	7	6	5	4	3	2	1

3. Alpha-numeric Series

In alpha-numeric series, the pattern of series is based on the combination of both numbers and letters.

These kind of problems use both mathematical operation and position of letters in the alphabet in both forward, backward or reverse order.

4. Continuous Pattern Series

Continuous pattern series consist of a series of small letters that follow a certain pattern like repetition of letters.

Method to Solve Continuous Series

- Firstly, count the number of blanks and given letters.
- Divide the whole sum of blanks and letters by a multiple.
- Note down the pattern common to all groups separately.

Practice Exercise

Directions (Q. Nos. 1-7) *In each of the following questions, various terms of alphabet series are given with one or more terms missing as shown by (?). Choose the missing terms out of the given alternatives.*

1. A, C, F, J, ?
a. K b. O c. M d. N
e. L
2. A, Z, D, Y, G, X, ?, ?
a. W, J b. J, W c. W, K d. K, W
3. NZ, OY, PX, QW, RV, ?
a. FS b. SU c. UF d. TU
e. SW
4. AZY, EXW, IVU, ?
a. MTS b. MQR c. NRQ d. LST
e. JWV
5. DKM, FJP, HIS, JHV, ?
a. LGY b. HGY
c. IGZ d. IGY
6. bc, cde, de, efg, fg, ?
a. ghi b. fgh
c. hij d. ijk
e. gh
7. CFL, EIK, GLJ, IOI, ?
a. KRH b. KRJ
c. JRU d. KOV

Directions (Q. Nos. 8-12) *These questions are based on the letter series. In each of these series, some letters are missing. Select the correct alternative.*

8. ab_d__b_dm__x__
a. xmaxabda b. xmaxabdm
c. mxaxabdm d. mxaxbadm
9. mc_m_a_ca_ca_c_mc
a. acmma b. camcam
c. aaacmm d. acmmc
10. b_ab_b_aab_b
a. abbb b. abba
c. baaa d. aaba
11. _bcab_cabc_abca_b
a. abca b. aabc
c. bbca d. abac
12. __r_ttp__s__tp__s__
a. pqrssqtpqtrp b. pqstrsqptrst
c. pqsqrqrtpq d. None of these

Directions (Q. Nos. 13-19) *In each of the following questions, number series is given with one of the terms missing. Choose the correct alternative that will continue the same pattern and replace the questions (?) in the given series.*

13. 21, 23, 27, 33, ?
a. 37 b. 41 c. 43 d. 49
14. 68, 67, 64, 59, ?
a. 52 b. 53 c. 54 d. 56
15. 1, 8, 27, ?, 125, 216 [2014]
a. 52 b. 58
c. 64 d. 65
16. 4, 7, 13, ?, 34, 49, ? [2010]
a. 20 b. 22
c. 24 d. 21
17. 5, 11, 24, ?, 106, 217, ? [2010]
a. 50 b. 50 c. 49 d. 51
18. 24, 6, 18, 9, 36, 9, 24, ? [2013]
a. 24 b. 12
c. 8 d. 6
e. 26
19. 83, 82, 81,, 69, 60, 33 [2007]
a. 73 b. 80
c. 77 d. None of these

Directions (Q. Nos. 20-24) *In each of the following questions, one of the terms in the number series is wrong. Find out the wrong term.*

20. 160, 118, 83, 65, 34, 20
a. 83 b. 118 c. 34 d. 65
e. 34
21. 1, 9, 25, 50, 81 [2012]
a. 1 b. 25
c. 50 d. 81
22. 5, 10, 17, 24, 37 [2011]
a. 10 b. 24
c. 17 d. 37
23. 1788, 892, 444, 220, 112, 52, 24 [2010]
a. 52 b. 112
c. 220 d. 444
24. 2, 3, 5, 8, 12, 18, 23
a. 13 b. 15 c. 16 d. 18
e. 23

Answer with Solutions

1. (b) The pattern of the series is as follows

2. (b) The pattern of the series is as follows

3. (b) The pattern of the series is as follows

4. (a) The pattern of the series is as follows

5. (a) The pattern of the series is as follows

6. (a) As, bc, cde, de, efg, fg, ghi

In this series, last letter of a term is started to new term and next two letter is included in the term.

7. (a)

8. (b) Here, repeated block is 'abxdm'.

Now, abxdm abxdm abxdm

9. (a) m c a / m c a / m c a / m c a / m c a / mc

10. (d) ba/ab/ab/ba/ab/ab

11. (a) abc/abb/cab/cca/bca/ab

12. (c) The last letter of each previous block is moved to the beginning of the successive block.

Now, pqrst/tpqrs/stpq/rstopq

13. (b) The pattern of the series is as follows

14. (a) The pattern of the series is as follows

15. (c) From the given series,

$$1^3 \longrightarrow 1, \quad 2^3 \longrightarrow 8$$

$$3^3 \longrightarrow 27, \quad 4^3 \longrightarrow 64$$

$$5^3 \longrightarrow 125, \quad 6^3 \longrightarrow 216$$

16. (b) The pattern of the series is as follows

17. (d) The pattern of the series is as follows

18. (b) The pattern of the series is

19. (c) Series is written in reverse order with a difference of

$$1^2, 1^3, 2^2, 2^3, 3^2, 3^3$$

i.e.

$$1, 1, 4, 8, 9, 27$$

20. (d) The pattern of the series is as follows

21. (c) The pattern of the series is

Hence, 50 is the wrong number.

22. (c) The pattern of the series is

Hence, 24 is the wrong number.

23. (b)

24. (d) The pattern of the series is as follows

4

Logical Deduction

It is a combination of an information based passage followed by some conclusions based on that, which are to be checked according to a given set of directions. This section deals with the questions in which unusual patterns of conclusions are inferred on the basis of a passage. Such conclusions are unusual as they are different from other type of conclusions which are based on the statements (as in case of syllogism). Infact, other type of conclusions are definite i.e. they are either definitely true or definitely false but here in the passage based conclusion, probability factor is also taken into consideration.

Directions (Examples 1-5) *In each question below is given a passage followed by several inferences. You have to examine each inference separately in the context of the passage and decide upon its degree of truth or falsity.*

Mark your answer as

- (a) If the inference is 'definitely true' i.e., it directly follows from the facts given in the passage;
- (b) If the inference is 'probably true' though not definitely true in the light of the facts given;
- (c) If you think the data are inadequate i.e., from the facts given you cannot say whether the inference is likely to be true or false;
- (d) If you think the inference is 'probably false' though not definitely false in the light of the facts given and;
- (e) If you think the inference is 'definitely false' i.e., it contradicts the given facts.

Passage

The railroad was not the first institution to impose regularity on society or to draw attention to the importance of precise time keeping. For as long as merchants have set out their wares at day break and communal festivities have been celebrated, people have been in rough agreement with their neighbours as to the time of day. The value of tradition is today more apparent than ever. Were it not for public acceptance of a single yardstick of time, social life would be unbearably chaotic. The massive daily transfer of goods. Services and information would proceed in fits and starts, the very fabric of modern society would begin to unravel.

1. An accepted way of measuring time is essential for the smooth functioning of society.
2. In modern society we must make more time for our neighbour's.
3. Society judges people by the time at which they conduct certain activities.

Sol. (Examples 1-3)

1. (a) Statement is a major objective in making the decision one of the goals sought by the decision maker.
2. (c) Statement is a minor factor in making the decision, a less important element bearing on or affecting a major factor rather than a major objective directly.
3. (c) This statement is minor factor in making the decision.

Practice Exercise

Passage 1

The smaller pesticide formulation units in India operate under heavy constraints such as obsolete technology, small scale of operation and dependence on large units for raw materials. In view of the loss of expensive material by the smaller units it is important to either eliminate or reduce losses to the extent possible through innovative and sustainable waste minimisation techniques. Operating profit margins of the units are very low and small adverse conditions land these companies in trouble. Maximum losses suffered by these units are through poor house keeping, sub-optimal operating practices, and lack of proper opportunities for recycling waste.

1. Smaller units should be operationally self-sufficient so as to minimise losses.
2. Recycling or wastes through modern techniques can set off large part of the losses incurred by the smaller units.
3. Pesticide units should necessarily be on a large scale to make them economically viable.
4. Waste management process in India needs modernisation.
5. Lack of funds compels smaller units to ignore house keeping.

Passage 2

The basic thrust of the Government's policy is to provide price incentives to farmers to make them produce more food. But is a price-incentive system always efficient in ensuring incremental yields ? Our contention is that this incentive works only in persuading farmers to shift cultivation from one crop to another depending on which crop is more profitable at the given prices. But it would not be a sufficient condition in ensuring incremental output of all crops which is what is required.

6. This passage is taken from an article written by an expert on agricultural finance.
7. The author is advocating for more yield of various crops.
8. The Government is not ready to increase the procurement price of crops.
9. According to the passage, the farmers are not income-conscious.
10. Recently there was an agitation by farmers for increase in procurement price of crops.

Passage 3

The water resources of our country are very much underutilised. The main reason of this underutilisation is the lack of capital and technology. A large portion of our water resources is wasted due to floods and unwise use of water for irrigation as well as domestic purposes. We can make full use of our water resources by building dams on rivers and by adoption policy of awareness among people not to waste water.

11. Our country has large areas to be irrigated and much water is wasted.
12. Building of dams is a essential step in the conservation of water resources.
13. Occurrence of floods adds to the water resources.
14. Some people do not use water resources in a judicious way.
15. The country does not have enough funds to develop water resources.

Passage 4

A recent survey shows that India has the lowest death rate for blood cancer. China, Thailand and Myanmar (countries that have taste for spices) also have low rates. Higher rates are found in U.S.A. where spices are not used. The typical American food remains chicken rolls, butter and beef.

16. Americans are unorthodox in their food habits.
17. Americans dislike spices.
18. Spices prevent blood cancer.
19. Spices promote forms of cancer other than blood cancer.
20. Chicken rolls, butter and beef promote cancer.

Passage 5

More than a decade of erosion in budgetary support from the Union Government has seriously affected Indian Railways capacity to finance its plan expenditures. The situation has come to a pass where the railways must now think of innovative ways to get longer mileage from its investments. Significantly the resource crunch has had grievous impact on the railways.

As a result, it will not be in a position to acquire necessary equipments and this will seriously affect the railways capacity to serve the needs of the economy in future.

21. Railways had so far believed in traditional ways in generating income.

- 22. Government has shifted its priority from railways to other areas.
- 23. The Union Government has reduced drastically the budgetary support to railways during the last decade.
- 24. The fiscal position of railways in the earlier plan period was better than the current plan period.
- 25. During the current plan period, the railways will not be able to expand its network.

Passage 6

Urban services have not expanded fast enough to cope with urban expansion. Low investment allocations have tended to be underspent. Both public (e.g., water and sewage) and private (e.g., low-income area housing) infrastructure quality has declined. This impact of the environment in which children live and the supporting services available to them when they fall ill, seems clear. The decline in average food availability and the rise in absolute poverty point in the same unsatisfactory direction.

- 26. There is nothing to boast about urban services.
- 27. The public transport system is in the hands of private sector.
- 28. Birth rate is higher in urban areas as compared to rural areas.
- 29. Low-cost urban housing is one of the priorities.
- 30. The environment around plays an important role on the health status.

- 31. Though adequate provisions of funds were made but they remained unspent.

Passage 7

The World Health Organisation has called for an improved surveillance to combat dengue and says the outbreak can be controlled in two weeks if all necessary steps are taken to stop the mosquitoes from breeding and break the transmission cycle. Dengue is already the most widespread mosquito-borne disease among humans. In the past 15 years, outbreaks in South and South-east Asia have been rapidly rising mostly due to falling environmental and public health standards during urbanisation. WHO reports that several forms of the disease such as haemorrhagic fever (DHF) and shock syndrome (DSS) are putting more than 2.5 million people at risk worldwide each year. Importantly, 95% of the DHF cases are among children less than 15 years. Therefore, the disease has major impacts on public health and future generations.

- 32. If rate of urbanisation in South Asia is controlled, outbreaks of all diseases may be reduced.
- 33. World Health Organisation has not collected data of outbreak of dengue in the past.
- 34. There was no outbreak of dengue in the European countries in the recent past.
- 35. Over the last decade South Asian countries have not successfully stepped up mechanism to combat dengue.
- 36. DSS type dengue seems mostly to be affecting the adults.

Answer with Solutions

1. (c) The given fact is neither mentioned in nor can be derived from the given passage.
2. (a) It is mentioned in the passage that maximum losses suffered by the smaller units are because of lack of proper opportunities for recycling waste. This clearly implies the given fact.
3. (b) From the first sentence of the passage, it is quite probable that operating on a large scale might make the pesticide units economically viable.
4. (a) The fact directly follows from the sentences 'In view of the loss..... waste minimisation techniques' in the passage.
5. (b) It is mentioned in the passage that the profit margins of small units are low and so small adverse conditions land them in trouble. Thus, it is quite probable that lack of funds compels these units to ignore house keeping.
6. (a) Since the passage analyses the merits and demerits of the Government's new fiscal policy relating to agriculture, the given conclusion follows.
7. (a) It is mentioned that the new policy will lead to a shift in cultivation and would not fulfill its real objective, which is to make farmers produce more food.
The last sentence of the passage also confirms the fact.
8. (e) According to the passage, the Government is providing price incentives to farmers. This contradicts the fact given in the question.
9. (d) According to the passage, the farmers would shift cultivation from the present crop to the more profitable one. This means that they are income-conscious.
10. (c) The fact is neither mentioned in nor can be derived from the passage.
11. (c) No mention of the land to be irrigated in India is there in the passage.
12. (a) It is given in the passage that we can make full use of our water resources by building of dams.
13. (b) It is mentioned that much of our water resources are wasted due to floods.
14. (d) It is mentioned that wastage of water takes place due to their unwise use for domestic purposes.
15. (a) It is given in the passage that underutilisation of the water resources of our country is due to lack of capital or funds.
16. (d) It is mentioned that Americans have almost the same diet, with no intake of spices. This means that probably they cannot change diet easily and are orthodox in food habits.
17. (c) Nothing about the reason for Americans not using spices in their diet is mentioned in the passage.
18. (a) The fact that blood cancer is more prominent in America, where spices are not used while the rate is much lower in Asian countries where spices are used, makes the given conclusion valid.
19. (c) Other forms of cancer have not been talked about in the passage.
20. (a) It is mentioned that blood cancer is more prominent in America, where the typical diet comprises of chicken rolls, butter and beef.
21. (a) It is mentioned in the passage that railways now need to find 'innovative ways' to get bigger returns for their investments. This clearly implies the given fact.
22. (b) According to the passage, budgetary support to the railways from the Union Government has declined. Perhaps this is because the Government has shifted its priority to some other areas.
23. (a) The fact directly follows from the first sentence of the passage.
24. (a) The fact that railways have now fallen in need of bigger returns from their investment, implies the given fact.
25. (a) The given fact directly follows from the last sentence of the passage.
26. (a) The first sentence of the passage verifies the given conclusion.
27. (c) Nothing about the public transport system is mentioned in the passage.
28. (c) The passage deals with deteriorating living conditions in urban areas. Nothing about the birth rate is mentioned.
29. (b) Since the passage condemns the decline in quality of low-income area housing, it is probable that it is a vital aspect of urban services.
30. (a) The conclusion directly follows from the statement. 'The impact of the environment seems clear' in the passage.
31. (e) The phrase low investment allocations in the passage implies that the funds provided were not adequate.
32. (b) It is mentioned in the passage that outbreaks in South and South-east Asia have been rapidly rising mostly due to falling environmental and public health standards during urbanisation. Thus, the fact in the question is quite probable.
33. (e) The passage talks of outbreak of dengue during the past 15 years. This contradicts the fact given in the question.
34. (c) The passage mentions the outbreak of dengue in Asian countries only and not the European countries.
35. (a) It is mentioned in the passage that cases of outbreak of dengue are rapidly rising in South Asian countries since the last 15 years. This means that adequate steps to combat dengue have not been taken.
36. (c) Nothing about the effect of DSS type dengue is mentioned in the passage.

5

Logic Chart

Logic charts is one of the major areas in most of the competitive exams. Any data like daily production, financial performance or productivity will have to be presented in a concise manner. Study and manipulation of such data leads us to an important area called logic charts.

Data can be organized in a number of ways so that larger volume of data can be presented in a more compact and precise form. Data thus presented has to be deciphered correctly by the user of data. Numerical data can be presented in one or more of the following ways.

- (i) Data Table
- (ii) Pie chart
- (iii) Bar chart
- (iv) Line Graph

Data can also be presented by using a combination of two or more of the above forms.

Let us understand each of the above forms of data representaion with an example.

Data Table

A Data Table is a chart of facts and figures represented in **horizontal rows** and **vertical columns**. These facts and figures can be of imports, exports, income of employees in a factory students applying for and qualifying a certain field of study.

The amount of data that can be presented on data table is much higher than that which can be presented on any other type of graph or chart.

e.g. The data table given below shows profit of 3 companies from year 2010 to 2012.

Column	Year	2010 (Profit%)	2011 (Profit%)	2012 (Profit%)	Row
	Company				
	SATYAM	30	20	15	1
	TCS	15	20	10	2
	L&T	15	10	35	3
		1	2	3	

Directions (Examples. 1-3) *Study the given table carefully and answer the questions that follow.*

Percentage of marks obtained by five students in five different subjects in a school

Subject Student	English (100)	Science (125)	Mathematics (150)	Social Studies (75)	Hindi (50)
Rahul	67	84	70	64	90
Veena	59	72	74	88	84
Soham	66	90	84	80	76
Shreya	71	66	80	66	86
Varun	63	76	88	68	72

Figures in brackets indicate maximum marks for a particular subject.

Ex. 1 What is Varun's overall percentage in the examination?

Sol. Total marks of Varun

= Sum of marks in English + Science + Mathematics
+ Social Studies + Hindi

= 63% of 100 + 76% of 125 + 88% of 150 + 68% of 75
+ 72% of 50

$= 63 + \frac{76 \times 125}{100} + \frac{88 \times 150}{100} + \frac{68 \times 75}{100} + \frac{72 \times 50}{100}$

$= 63 + 95 + 132 + 51 + 36 = 377$

$\therefore \text{Required percentage} = \frac{\text{Total marks of Varun}}{\text{Total marks}} \times 100\%$

$= \frac{377}{500} \times 100\% = 75.4\%$

Ex. 2 If in order to pass the exam, a minimum of 95 marks are needed in Science, how many students pass in the exam?

Sol. Let pass percentage in Science be x .

Then, $x\%$ of 125 = 95

$\Rightarrow \frac{125 \times x}{100} = 95 \Rightarrow x = \frac{95 \times 100}{125} = 76$

Only three students will pass. (Rahul, Soham and Varun)

Ex.3 What is the respective ratio of total marks obtained by Veena and Shreya together in Mathematics to the marks obtained by Rahul in the same subject?

Sol. Total marks obtained by Veena and Shreya together in Mathematics

= 74% of 150 + 80% of 150

$= \frac{74 \times 150}{100} + \frac{80 \times 150}{100} = 111 + 120 = 231$

Marks obtained by Rahul in Mathematics = 70% of 150

$= 150 \times \frac{70}{100} = 105$

$\therefore \text{Ratio} = \frac{231}{105} = \frac{11}{5} = 11:5$

Pie Chart

Pie chart is a circular chart divided into sectors in which the arc length, its central angle and area are proportional to the quantities that it represents.

Pie chart is called so because of its shape. Each slice of pie is allowed to each category and shows the portion of the entire pie.

In the questions of pie chart, the total quantity is distributed over a total angle of 360° or 100%. Here, the data can be plotted with respect to only one parameter.

Uses of pie charts are restricted to represent limited type of information.

Pie chart is also useful for representing proportions or percentages of various elements with respect to the total quantity.

The following pie chart gives the distribution of the population in different geographical zones.

Distribution of population in geographical zones

From the above pie chart, we can calculate the following

Population in any zone when the total population is given.

Population of any zone as a percentage of that of another zone.

Percentage increase in the total population, given that percentage increase in the population of one or more zones.

Direction (Example. 4) *Refer to the following pie chart and answer the questions that follow.*

National budget expenditure in the year 2012
(Percentage distribution)

Ex.4 In year 2012, if India had a total expenditure of ₹ 120 billion, then how many billions did it spend on interest on debt?

Sol. Total expenditure = 120 billion

∴ Expenditure of interest on debt = 9% of 120

$$= \frac{9}{100} \times 120$$

$$= ₹ 10.8 \text{ billion}$$

Bar Chart

A bar chart is a chart with rectangular bars with lengths proportional to the values that they represent. Bar charts are diagrammatic representation of discrete data.

A bar is a thick line whose width is shown merely for attention. In this method of data representation, the data is plotted on the *X* and *Y*-axes as bars.

One of the axes (normally the *X*-axis) of the bar diagram represents a discrete variable, while the other axis represents the scale for continuous variable.

Each bar diagram has a title indicating the subject matter represented in the diagram.

Types of Bar Chart

Following are the main bar charts

1. **Simple bar chart** A simple bar chart relates to only one variable.

For example Given below chart shows the percentage distribution of total expenditure of a company

2. **Sub-divided bar chart** A sub-divided bar chart is used to represent various parts of total magnitude of a given variable.

For example Given below chart shows percentage distribution of sales of 4 books in two different year.

3. **Multiple bar chart** In this type, two or more bars are constructed adjoining each other to represent either different components of a complete data or to show multiple variables.

For example Given below chart show the production of 3 types of car in three different year.

Line Graph

A line graph (cartesian graph) indicates the variation of a quantity with respect to the two parameters calibrated (plotted) on *X* and *Y*-axes, respectively.

A line graph shows the quantitative information or a relationship between two changing quantities (variables) with a **line or curve** that connects a series of successive data points.

Types of Line Graph

Different types of line graph are discussed below

1. **Single Line Graph** Used for single variable representation.

For example The following single line graph represents the yearly sales figure of a company in the years 2001-2010.

2. Multiple Line Graph Used for more than one variable representation.

For example The following multiple line graph represents the maximum and minimum temperature recorded everyday in a certain week.

Practice Exercise

Directions (Q. Nos. 1-4) Study the following table and answer the questions based on it.

The table given below depicts the export of a commodity through four ports in the year 1998 and 1999.

Port	Export in 1998 (in ₹ crore)	Export in 1999 (in ₹ crore)
A	57	61
B	148	160
C	229	234
D	146	150

- The percentage increase in the export of the commodity from the year 1998 to 1999 was the highest from which port?
a. A b. B c. C d. D
- What was the change in the aggregate export of the commodity in the year 1999 as compared to the year 1998?
a. Nearly 4.3% increase
b. Nearly 4.3% decrease
c. Nearly 0.04% increase
d. Nearly 0.04% decrease
- What was the average increase in the export of the commodity from the ports in the year 1999 as compared the year 1998?
a. ₹ 82500000 b. ₹ 80000000
c. ₹ 75000000 d. ₹ 62500000
- The percentage increase in the export of the commodity from the year 1998 to 1999 was the lowest from which port?
a. A b. B
c. C d. D

Directions (Q. Nos. 5-9) The following pie chart represents a total expenditure of ₹ 540000 on different items in constructing a flat in a town. Study the pie chart and answer the questions.

- The expenditure (in ₹) on bricks is
a. 75000 b. 67500
c. 150000 d. 70000
- The expenditure on bricks is less than the expenditure on timber (in ₹) by
a. 10000 b. 12500
c. 60000 d. 65000
- The percentage of the total expenditure spent on steel and cement is
a. 33.23% b. 25%
c. $33\frac{1}{3}\%$ d. 30%
- Which is the item of maximum expenditure?
a. Cement b. Steel
c. Timber d. Labour
- The expenditure (in ₹) on cement is
a. 75000 b. 90000
c. 135000 d. 112500

Directions (Q. Nos. 10-13) Study the following graph and answer the questions that follow.

Demand and production of colour TVs of five companies for Jan 2006

10. What is the ratio of the number of companies having more demand than production to the number of companies having more production than demand?
 - a. 2 : 3
 - b. 4 : 1
 - c. 2 : 2
 - d. 3 : 2
11. What is the difference between average demand and average production of the five companies taken together?
 - a. 1400
 - b. 400
 - c. 280
 - d. 138
12. Demand of company D is approximately what per cent of demand of company E?
 - a. 12%
 - b. 20%
 - c. 24%
 - d. 30%
13. What is the ratio of average demand to average production of companies B and D?
 - a. 1 : 5
 - b. 2 : 5
 - c. 3 : 5
 - d. 4 : 5

Directions (Q. Nos. 14-18) Study the following graph carefully and answer the questions that follow.

The per cent rise in production from the years 1999 to 2006.

14. For how many years, the per cent rise was more than 100%?
 - a. One
 - b. Two
 - c. Three
 - d. Five
 - e. None of these
15. What was the average of per cent rise over the given years?
 - a. 110%
 - b. 105%
 - c. 100.5%
 - d. 92.5%
 - e. None of these
16. For how many years, the per cent rise was lower than the average of the per cent rise over the given years?
 - a. Two
 - b. One
 - c. Five
 - d. Three
 - e. None of these
17. For which of the given years, the per cent rise (from the previous year) was the least? [Years 2001 and 2003 are not to be considered.]
 - a. 2000
 - b. 2004
 - c. 2006
 - d. Cannot be determined
 - e. None of these
18. If the production in year 1998 was 1000 units, then how much was the production in year 2002?
 - a. 35280 units
 - b. 64680 units
 - c. 46200 units
 - d. Cannot be determined
 - e. None of these

Answer with Solutions

1. (b) Percentage increase from port A

$$= \frac{61 - 57}{57} \times 100\% = 7.01\%$$

Percentage increase from port B

$$= \frac{160 - 148}{148} \times 100\% = 8.10\%$$

Percentage increase from port C

$$= \frac{234 - 229}{229} \times 100\% = 2.18\%$$

Percentage increase from port D

$$= \frac{150 - 146}{146} \times 100 = 2.74\%$$

So, the highest increment is from port B.

2. (a) Total export in year 1998

$$= 57 + 148 + 229 + 146 = 580 \text{ crore}$$

Total export in year 1999

$$= 61 + 160 + 234 + 150 = 605 \text{ crore}$$

$$\text{Required percentage} = \frac{605 - 580}{580} \times 100\%$$

$$= 4.3\% \text{ increase}$$

3. (d) Total increase = 605 - 580 = 25 crore

$$\therefore \text{Average increase} = \frac{25}{4} \text{ crore}$$

$$= 62500000$$

4. (c) It is clear from solution 1 that lowest increment is from port C.

5. (a) Angle made by the expenditure on bricks

$$= 360^\circ - (45^\circ + 100^\circ + 90^\circ + 75^\circ)$$

$$= 360^\circ - 310^\circ = 50^\circ$$

Thus, expenditure on bricks

$$= \frac{50^\circ}{360^\circ} \times 540000 = ₹ 75000$$

6. (c) Required value

$$= \frac{(90^\circ - 50^\circ)}{360^\circ} \times 540000 = ₹ 60000$$

7. (c) Expenditure on steel and cement

$$= 75^\circ + 45^\circ = 120^\circ$$

$\therefore$ Required percentage

$$= \frac{120^\circ}{360^\circ} \times 100\% = \frac{100}{3}\% = 33\frac{1}{3}\%$$

8. (d) From the given pie chart, it is clear that 'Labour' has maximum expenditure.

9. (d) Expenditure on cement

$$= \frac{75^\circ}{360^\circ} \times 540000 = ₹ 112500$$

10. (d) Companies which have more demand than production = A, C and E, i.e. 3 companies.

Companies which have more production

than demand = B, D i.e. 2 companies

$\therefore$ Required ratio = 3 : 2

11. (c) Average demand

$$= \frac{\text{Sum of all demands}}{\text{Number of all demands}} \\ = \frac{3300 + 1200 + 3000 + 600 + 2500}{5} \\ = \frac{10600}{5} = 2120$$

Similarly, average production

$$= \frac{2200 + 2700 + 1500 + 1800 + 1000}{5} = \frac{9200}{5} = 1840$$

$$\therefore \text{Required difference} = 2120 - 1840 \\ = 280$$

12. (c) Required percentage = $\frac{600}{2500} \times 100\%$
= 24%

13. (b) Average demand of B and D

$$= \frac{1200 + 600}{2} = \frac{1800}{2} = 900$$

Average production of B and D

$$= \frac{2700 + 1800}{2} = \frac{4500}{2} = 2250$$

$$\therefore \text{Required ratio} = \frac{900}{2250} = 2 : 5$$

14. (e) For 4 yr, i.e. 2002, 2004, 2005 and 2006, the percentage rise was more than 100%.

15. (d) Required average

$$= \frac{(40 + 50 + 40 + 120 + 100) + (120 + 130 + 140)}{8} = \frac{740}{8} = 92.5\%$$

16. (d) The relevant years were 1999, 2000 and 2001.

17. (c) In the year 2000,

$$= \frac{50 - 40}{40} \times 100\% = 25\%$$

$$\text{In the year 2004, } \frac{120 - 100}{100} \times 100\% = 20\%$$

$$\text{In the year 2006, } \frac{140 - 120}{120} \times 100\% = 16.67\%$$

Clearly, per cent rise was the least for the year 2006.

18. (e) Production in year 2002

$$= 1000 \times \frac{140}{100} \times \frac{150}{100} \times \frac{140}{100} \times \frac{220}{100} = 6468$$

6

NON-VERBAL

Completion of Figure

Figure completion is a way or process to find out a missing part of a incomplete figure.

In this chapter, we deal with the questions in which a part of figure is missing, generally 1/4th part of figure and a candidate is asked to find the missing part from the option figure. These type of questions are designed to test the candidate's ability to correlate missing visual parts.

Here, you are required to understand the general structure of the figure, then choose the correct alternative.

Different types of questions covered in this chapter are as follows

1. Rotational Symmetry through an Angle of 90°

In this type of questions, the question figure looks the same if it is rotated by 90° in clockwise (CW) or anti-clockwise (ACW) direction.

2. Diagonally Opposite Parts are Similar

In this type of questions, the diagonally opposite parts have similar design and if the figure is rotated through 180° in CW or ACW direction the figure remains the same.

3. Adjacent Parts are Laterally/Vertically Inverted Images

In this type of questions, the adjacent parts are laterally/vertically inverted images of each other.

4. Based on Certain Design and Pattern

In this type of questions, they do not follow any of the patterns discussed in the previous types. These questions contain a certain design or pattern with one of its parts missing. A candidate has to complete the design accordingly.

7

Figure Formation

Introduction

The process of formation of a defined geometrical figure with the use of pieces of different designs is known as formation of figure.

Figure formation deals with the problems related to the formation of geometrical figures like triangle, square, circle, etc., by joining some pieces out of a group of pieces of different designs. Besides this, some questions are asked in which the question figure contains some figures which can be joined together to obtain one of the alternative answer figures and one has to find out the correct alternative. Also, there are questions in which one question figure is given and we have to find out the correct answer figure in which all the pieces which are required to form the question figure are present.

In such questions, a question figure is given followed by four/five answer choices. The candidate is required to select the correct figure out of the given answer choice figures.

Different types of questions covered in this chapter are as follows

1. Based on Arrangement of the Figures

In this type of questions, a candidate is required to select a figure, out of the answer choice figures, that can be formed by arranging the pieces given in the question figure.

2. Based on Signs and Symbols

Such problems are just the reverse of type I. In this type of questions, question figures are to be formed with the pieces of one of the figures given in the answer choices and the candidate is required to find out the correct answer figure. Sometimes, pieces of boundary lines of the question figure are also given in the answer figure, then in this case these pieces are also counted for the formation of question figure. These questions require deep analysis of the question and answer figures.

3. Based on Formation of Triangle

In this type of questions, a triangle (equilateral, isosceles etc.) is to be formed by joining three figures out of a group of figures of different designs. A candidate is required to find out the correct combination of figures from the given alternative combinations.

To solve these type of questions, there is no fixed rule or method. These questions requires a deep analysis of various

element (designs) present to form a figure and spatial analysis of the figure to be formed.

4. Square Formation Using a Set of Figures

In this type of questions, a square is to be formed by joining three figures out of a group of figures of different designs. A candidate is required to find out the correct combination of figures from the given sets of figures.

Practice Exercise

Directions (Q. Nos. 1-11) In each of the following questions, find out which of the figures (a), (b), (c) and (d) can be formed from the pieces given in figure (X).

Directions (Q. Nos. 12-16) *In each of the following questions, find out which of the alternatives (a), (b), (c) and (d) will exactly make up the key figure (X).*

8

Paper Folding and Cutting

1. Paper Folding

Paper folding is a process in which a piece of paper (with certain embedded design pattern) is folded along a certain dotted line and it is asked to select the correct folded pattern.

Questions based on 'Paper Folding' comprise of a question figure representing a transparent sheet and four answer figures. The transparent sheet contains some figural pattern and one/more dotted lines. These dotted lines indicate the axis (axes) along which the paper is folded. A candidate is asked to choose an option from the given set of options, which would resemble the design that appears on the transparent sheet after folding.

2. Paper Cutting

Paper cutting is a process in which a piece of paper (of any shape) is folded along a certain direction and then cuts are made into it.

In paper cutting, questions based on one or more question figures are given showing the manner in which a piece of paper is folded, where a dotted line is the reference line along which the paper has to be folded and the arrow indicates the direction of the fold. Then, the paper is punched (cut) from a particular section. Such cuts may be based on varying patterns. These patterns appear on the paper when the paper is unfolded after cutting. The candidates are required to see the question figure(s) carefully and then identify the unfolded paper having correct cutting pattern out of the four answer choices given in the form of figures.

Types of Questions

1. Selecting Unfolded Pattern of a Folded Punched Piece of Paper

In this type of questions, the order in which a paper is folded and its punching pattern after folding is depicted through a series of question figures. The objective is to select from among the four answer figures, the one which correctly shows the shape of the paper after it is unfolded.

2. Selecting Folded and Punched Pattern Based on Unfolded Pattern

In such type of questions, a question figure is given which represents an unfolded piece of paper with several punches (cuts) made into it along with it, four alternatives representing differently folded and punched paper patterns are also given. The candidates are required to analyse the answer figures to find out the correct folded and punched paper pattern for the given unfolded pattern.

Practice Exercise

Directions (Q. Nos. 1-19) In each of the following questions, a figure marked as transparent sheet is given and followed by four answer figures, one out of these four options resembles the figure which is obtained by folding transparent sheet along the dotted line. Find the answer from these figures.

Transparent sheet

Answer figures

Directions (Q. Nos. 28-34) In each of the following questions, a set of three figures (X), (Y) and (Z) have been given, showing a sequence in which a paper is folded and finally cut at a particular section. Below these figures a set of answer figures marked (a), (b), (c) and (d) showing the design which the paper actually acquires when it is unfolded are also given. You have to select the answer figure which is closest to the unfolded piece of paper.

9

Figure Matrix

Figure matrix is a 2×2 or 3×3 representation of figures following a certain pattern in matrix form.

In this chapter, we deal with questions which have either 2×2 or 3×3 matrix. These matrix are formed by a group of figures. Corresponding rows or corresponding columns follow a certain pattern. You are required to analyse each of the sets to find out the common pattern and on the basis of that, the missing figure is to be identified from a set of alternatives, so as to complete the matrix.

The common pattern can be on the basis of number of elements, orientation of figure, addition or deletion of elements etc.

For clear understanding of this chapter, few example are given below

Directions (Examples 1-2) *In each of the following questions, find out the answer figure which completes the problem figure matrix.*

Ex. 1

Problem Figure

Answer Figures

Sol. (d) The second part of each row is thrice the first part. So, the figure given in option (d) will replace the question mark.

Ex. 2

Problem Figure

Answer Figures

Sol. (d) In each row, the second figure is obtained by removing the outer most element of the first figure and the third figure is obtained by removing the outer most element of the second figure.

Answer with Solutions

- (d) In each row of figure, the number of dots in the second figure is thrice the number of dots in the first figure.
- (c) Columnwise, second element is the mirror image of first element.
- (a) The pattern is as follows

Hence, option (a) is the correct answer.

- (d) The pattern is as follows

Hence, option (d) is the correct answer.

- (b) In clockwise direction, every figure is increasing with one line. So, it will be 4 lines in figure (b).
- (d) Each row, the second figure is obtained by rotating the first figure 135° anti-clockwise.

- (c) In each row, the third figure is a collection of the common elements.
- (b) Figures in each row are rotating clockwise 90° .
- (a) In figure, each row consists of a circle and two segments or three line segments or four line segments. So, in third row only the figure with three line segments is missing.
- (d) The third figure in each row comprises of parts which are not common in the first two figures.
- (c) There is a triangle after circle and square after triangle. In the last row, we have to find the figure inside the triangle. In the next segment of circle, there is triangle and a square will be inside the triangle.
- (b) The pattern is as follows

Hence, option (b) is the correct answer.

13. (d) Clearly, there are three types of shadings of circles, one is unshaded, another has its right half shaded with vertical lines and yet another and has its upper half shaded with horizontal line. Also, two of the figures in each row have one triangle shaded.
14. (a) Clearly, there are three types of arrows—one arrow is with a single head and without any base, other arrow with double head having a circle at its base, last arrow is with triple head having a rectangle at its base. Also, in each row, the arrows point to three directions—upwards, downwards and towards the right.
15. (d) Clearly, in each row, the second figure forms the innermost which is also at the outermost position and first figure at middle position.
16. (d) In first and third set, the black portion of middle image is diagonally opposite to that of first image. Hence, second image in second set must be option (d).
17. (d) If we use figure (d) from the alternatives, the given matrix is complete.
18. (a) Each column has one '+', one 'o' and one 'x'. First figure of each column is without boundary and second one is in the square. Third figure is in two squares. As, there are '+' and 'o' in third column.

So, figure 'x' will be surrounded by two squares.

19. (c) Clearly, in each row, the number of elements in the third figure is equal to the difference in the number of elements in the first and second figures. Also, the third figure has the same types of elements as that of first figure.
20. (b) In each row, the second figure is obtained from the first figure by adding two mutually perpendicular line segments at the centre and the third figure is obtained from the first figure by adding four circles outside the main figure.
21. (b) In each row, the figure are getting laterally inverted in each step. The number of components or the quantities are either increasing or decreasing from left to right sequentially.
22. (a) The number of components in each row either increases or decreases from left to right. In the third row, it increases.
23. (d) In each row, there are three types of outer elements (circle, triangle and square), three types of inner elements (circle, triangle and square) and three types of shadings in the inner elements (black, white and lines).
24. (b) The third figure in each row comprises of parts which are not common to the first two figures.

10

Rule Detection

In this chapter, we will solve problems in which, a particular rule is given and it is required to select from the given sets of figures, a set of figures which obeys the rule and thus forms a series.

e.g. Which one of the given sets of figures follows the following rule?

Rule Sectors get converted to triangles one by one.

Sol (b) The region of the circle enclosed between two radii is called a sector. In the first figure of set (b), the circle is divided into sectors and in the subsequent figures of set (b), the arcs are replaced one by one, by straight lines so that the sectors are converted one by one into triangles. Hence, set (b) is the answer.

Practice Exercise

Directions (Q. Nos. 1-12) *In each of the following questions, choose the set of figures which follows the given rule. (X).*

- 1. Rule** Closed figures become more and more open and open figures become more and more closed.

[2007]

- 2. Rule** Closed figure becomes more and more open.

- 3. Rule** Closed figures become more and more open and open figures become more and more closed.

[2005]

- 4. Rule** Closed figures losing their sides and open figures gaining their sides.

5. Rule The series becomes complex as proceeds.

6. Rule Any figure can be traced by a single unbroken line unbound retracing. [2008]

7. Rule Closed figures become more and more open and open figures become more and more closed.

8. Rule As the circle decreases in size, its sectors increase in number.

9. Rule Closed figures become more and more open and open figures become more and more closed.

10. Rule The series becomes complex it proceeds.

11. **Rule** Closed figures gradually become open and open figures gradually become closed.

12. **Rule** The series becomes simpler as it proceeds.

13. Which of the figures (a), (b), (c) and (d) will be the answer figure if the following rule is applied to figure (X)?

Rule The curves should become straight lines and the straight lines should become curves.

Answerss

1. (c) 2. (a) 3. (a) 4. (c) 5. (b) 6. (b) 7. (a) 8. (d) 9. (b) 10. (c)
11. (c) 12. (c) 13. (a)

PRACTICE SETS

Practice Set 1

BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as follows Subject
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

Part I Physics	1-40
Part II Chemistry	41-80
Part III (a) English Proficiency	81-95
(b) Logical Reasoning	96-105
Part IV Mathematics	106-150

PART I

Physics

- In the relation, $p = \frac{\alpha}{\beta} e^{\left(-\frac{\alpha z}{k\theta}\right)}$, where p is pressure, z is distance, k is Boltzmann constant and θ is temperature. The dimensional formula of β will be
 - $[M^0 L^2 T^0]$
 - $[ML^2 T]$
 - $[M^0 L^2 T^{-1}]$
 - $[ML^0 T^{-1}]$
- A cube has a side of length 1.2×10^{-2} m. Calculate its volume.
 - $1.7 \times 10^{-6} \text{ m}^3$
 - $1.73 \times 10^{-6} \text{ m}^3$
 - $1.70 \times 10^{-6} \text{ m}^3$
 - $1.732 \times 10^{-6} \text{ m}^3$
- Maximum height reached by projectile is 4 m. The horizontal range is 12 m. Velocity of projection is
 - $4\sqrt{\frac{g}{2}}$
 - $5\sqrt{\frac{g}{2}}$
 - $\frac{1}{4}\sqrt{\frac{g}{2}}$
 - $\frac{1}{5}\sqrt{\frac{g}{2}}$
- A body A starts from rest with an acceleration a_1 . After two seconds, another body B starts from rest with an acceleration a_2 . If they travel equal distances in 5th second after the start of A , then the ratio of $a_1 : a_2$ is equal to
 - 5 : 9
 - 1 : 3
 - 3 : 1
 - 9 : 1
- A smooth block is released at rest on a 45° incline and then slides distance d . The time taken to slide is n times as much to slide on rough incline than on a smooth incline. The coefficient of friction is
 - $1 - \frac{1}{n^2}$
 - $\sqrt{1 - \frac{1}{n^2}}$
 - $\frac{1}{n^2} - 1$
 - $\sqrt{\frac{1}{n^2} + 1}$
- A long horizontal rod has a bead which can slide along its length and initially placed at a distance L from one end of the rod. The rod is set in angular motion about A with constant angular acceleration α . If the coefficient of friction between the rod and the bead is μ and the gravity is neglected, then time after which the bead starts slipping is
 - $\sqrt{\mu/\alpha}$
 - $\mu/\sqrt{\alpha}$
 - $\frac{1}{\sqrt{\mu\alpha}}$
 - $\frac{1}{\mu\sqrt{\alpha}}$

7. A particle tied to string describes a vertical circular motion of radius r continually. If it has a velocity $\sqrt{3gr}$ at the highest point, then the ratio of the respective tensions in the string holding it at the highest and lowest points is
 a. 4 : 3 b. 5 : 3
 c. 1 : 4 d. 4 : 1
8. A shell of mass 20 kg at rest explodes into two fragments whose masses are in the ratio 2 : 3. The smaller fragment moves with a velocity of 6 ms^{-1} . The kinetic energy of the larger fragment is
 a. 96 J b. 216 J
 c. 144 J d. 360 J
9. A wire of length l and mass m is bent in the form of a semicircle. The gravitational field intensity at the centre of semicircle is

 a. $\frac{Gm}{\pi l}$ along X-axis b. $\frac{Gm}{\pi l}$ along Y-axis
 c. $\frac{2\pi Gm}{l^2}$ along Y-axis d. $\frac{2\pi Gm}{l^2}$ along X-axis
10. A spherical liquid drop of radius R is divided into eight equal droplets. If surface tension is T , then work done in the process will be
 a. $2\pi R^2 T$ b. $3\pi R^2 T$
 c. $4\pi R^2 T$ d. $2\pi R T^2$
11. A body of density D_1 and mass M is moving downward in glycerine of density D_2 . What is the viscous force acting on it ?
 a. $Mg D_1$ b. $Mg D_2$
 c. $Mg \left(1 - \frac{D_2}{D_1}\right)$ d. $Mg \left(1 + \frac{D_2}{D_1}\right)$
12. A 2 kg copper block is heated to 500°C and then it is placed on a large block of ice at 0°C . If the specific heat capacity of copper is $400 \text{ J/kg}^\circ\text{C}$ and latent heat of fusion of water is $3.5 \times 10^5 \text{ J/kg}$, the amount of ice that can melt is
 a. $\frac{7}{3} \text{ kg}$ b. $\frac{7}{5} \text{ kg}$
 c. $\frac{7}{8} \text{ kg}$ d. $\frac{8}{7} \text{ kg}$
13. A same force is acting on two wires made of same material. One wire has length l and diameter d . The other wire has length $\left(\frac{l}{2}\right)$ and diameter $2d$. If the extensions in the two wires are l_1 and l_2 such that $l_1 + l_2 = 1 \text{ cm}$, then the values of l_1 and l_2 are
 a. 0.80 cm, 0.20 cm b. 0.89 cm, 0.11 cm
 c. 0.90 cm, 0.10 cm d. 0.95 cm, 0.05 cm
14. A temperature of equal masses of three different liquids A, B and C are $12^\circ\text{C}, 19^\circ\text{C}$ and 28°C , respectively. The temperature when A and B are mixed is 16°C , when B and C are mixed is 23°C . What is the temperature when A and C are mixed ?
 a. 26.02°C b. 26.60°C
 c. 20.26°C d. 21.62°C
15. 1 mm^3 of a gas is compressed at 1 atmospheric pressure and temperature 27°C to 627°C . What is the pressure under adiabatic condition? (γ for gas = 1.5)
 a. $27 \times 10^5 \text{ Nm}^{-2}$
 b. $36 \times 10^5 \text{ Nm}^{-2}$
 c. $56 \times 10^5 \text{ Nm}^{-2}$
 d. $80 \times 10^5 \text{ Nm}^{-2}$
16. If one mole of a monoatomic gas $\left(\gamma = \frac{5}{3}\right)$ is mixed with one mole of a diatomic gas $\left(\gamma = \frac{7}{5}\right)$, the value of γ for the mixture is
 a. 3.7 b. 1.63
 c. 1.50 d. 1.40
17. In the given diagram, S_1 and S_2 are identical springs. The frequency of oscillation of mass m is f . If one spring is removed, the frequency will be

 a. $\frac{f}{\sqrt{2}}$ b. $\frac{f}{2}$
 c. $\sqrt{2}f$ d. $2f$
18. A capacitor of capacitance $1 \mu\text{F}$ is filled with two dielectrics of dielectric constants 4 and 6. The new capacitance is
 a. $10 \mu\text{F}$ b. $5 \mu\text{F}$
 c. $4 \mu\text{F}$ d. $7 \mu\text{F}$
19. A small oil drop of mass 10^{-6} kg is hanging at rest between two plates separated by 1 mm having a potential difference of 500 V. The charge on the drop is
 a. $2 \times 10^{-9} \text{ C}$ b. $2 \times 10^{-11} \text{ C}$
 c. $2 \times 10^{-6} \text{ C}$ d. $2 \times 10^{-8} \text{ C}$
20. Three plates of area A each are connected as shown in figure. The effective capacitance becomes :

 a. $\frac{\epsilon_0 A}{d}$ b. $\frac{3\epsilon_0 A}{d}$
 c. $\frac{1.5 \epsilon_0 A}{d}$ d. $\frac{2 \epsilon_0 A}{d}$

21. Two capacitors $C_1 = 2\mu\text{F}$ and $C_2 = 6\mu\text{F}$ in series are connected in parallel to a third capacitor $C_3 = 4\mu\text{F}$. This arrangement is then connected to a battery of emf 2V as shown in figure. How much energy is lost by the battery in charging the capacitors?

- a. $22 \times 10^{-16}\text{J}$
 b. $11 \times 10^{-6}\text{J}$
 c. $\frac{32}{3} \times 10^{-6}\text{J}$
 d. $\frac{16}{3} \times 10^{-6}\text{J}$
22. In a circuit, galvanometer G shows zero deflection. If the batteries A and B have negligible resistance, the value of R will be

- a. 1000Ω
 b. 500Ω
 c. 200Ω
 d. 100Ω
23. In the given figure, the internal resistance of the battery is 1.5Ω and V_P and V_Q are potential at P and Q respectively. What is the potential difference between the points P and Q ?

- a. Zero
 b. 4V ($V_P > V_Q$)
 c. 4V ($V_Q > V_P$)
 d. 2.5V ($V_Q > V_P$)
24. In the given figure, the potentiometer wire AB has a resistance of 5Ω and length 10 m. The balancing length AJ for the emf of 0.4V is

- a. 0.4m
 b. 0.8m
 c. 1.52m
 d. 4m
25. A milliammeter of range 10mA has a coil of resistance 1Ω . To use it as a voltmeter of range 10V , the resistance that must be connected in series with it is
- a. 9Ω
 b. 99Ω
 c. 999Ω
 d. 1000Ω

26. In the diagram I_1, I_2 are the strength of the currents in the loop and straight conductor respectively. $OA = OB = R$. The net magnetic field at the centre O is zero. Then, the ratio of the currents in the loop and the straight conductor is

- a. π
 b. 2π
 c. $1/\pi$
 d. $1/2\pi$
27. The magnetic field intensity due to a thin wire carrying current I in the figure shown, is

- a. $\frac{\mu_0 I}{2\pi R}(\pi - \alpha + \tan \alpha)$
 b. $\frac{\mu_0 I}{2\pi R}(\pi - \alpha)$
 c. $\frac{\mu_0 I}{2\pi R}(\pi + \alpha)$
 d. $\frac{\mu_0 I}{2\pi R}(\pi + \alpha - \tan \alpha)$
28. Electromagnets are made of soft iron because soft iron has
- a. low susceptibility and high retentivity
 b. high permeability and low retentivity
 c. low permeability and high coercivity
 d. low permeability and high retentivity
29. A magnetic dipole of moment 0.72Am^2 is placed horizontally with the north pole pointing south. The magnetic field of earth is $18\mu\text{T}$. The neutral points is at
- a. 0.1m on axial line
 b. 0.2m on equatorial line
 c. 0.2m on axial line
 d. 0.16m on equatorial line
30. Two coils have a mutual inductance 0.005H . The current changes in the first coil according to equation $I = I_0 \sin \omega t$, where $I_0 = 10\text{A}$ and $\omega = 100\pi\text{rad/s}$. The maximum value of emf in the second coil is
- a. 2π
 b. 5π
 c. 6π
 d. 12π
31. In a series LCR circuit, voltage across R is 100V and $R = 1\text{k}\Omega$ with $C = 2\mu\text{F}$. The resonant frequency ω is 200rad/s . At resonance the voltage across L is
- a. $4 \times 10^{-3}\text{V}$
 b. $2.5 \times 10^{-2}\text{V}$
 c. 40V
 d. 250V
32. A thin lens of glass ($n = 1.5$) of focal length 10cm is immersed in water ($n' = 1.33$). The new focal length is
- a. 12cm
 b. 20cm
 c. 40cm
 d. 48cm
33. Time taken by sunlight to pass through a window of thickness 4mm and refractive index $3/2$ is
- a. $2 \times 10^{-4}\text{s}$
 b. $2 \times 10^8\text{s}$
 c. $2 \times 10^{-11}\text{s}$
 d. $2 \times 10^{11}\text{s}$

34. The size of image of an object, which is at infinity, as formed by a thin convex lens of focal length 30 cm is 2 cm. If a concave lens of focal length 20 cm is placed between the convex lens and the image at a distance of 26 cm from the convex lens, calculate the new size of the image.
 a. 1.25 cm b. 2.5 cm c. 1.05 cm d. 2 cm
35. A slit width a is illuminated by red light of wavelength 6500 Å. If the first minimum falls at 30° , the value of a is
 a. 6.5×10^{-4} mm b. 1.3×10^{-6} m
 c. 2.6×10^{-4} m d. 1.3×10^{-4} m
36. The energy (E) of a photon is equal to the kinetic energy of proton. Let λ_1 be the de-Broglie wavelength of the proton and λ_2 be the wavelength of the photon. The ratio of λ_1 and λ_2 is proportional to
 a. E^{-2} b. E^{-1} c. $E^{1/2}$ d. E^0
37. The transition from the state $n=4$ to $n=3$ in a hydrogen atom results in ultraviolet radiation. Infrared radiation will be obtained in the transition from
 a. $3 \rightarrow 2$ b. $4 \rightarrow 2$
 c. $5 \rightarrow 4$ d. $2 \rightarrow 1$
38. In a transistor the base is
 a. an insulator
 b. a conductor of low resistance
 c. a conductor of high resistance
 d. an extrinsic semi-conductor
39. In a common emitter transistor, the base current $I_b = 2 \mu\text{A}$, $\alpha = 0.9$, then I_c is equal to
 a. $18 \mu\text{A}$ b. $20 \mu\text{A}$
 c. $22 \mu\text{A}$ d. $24 \mu\text{A}$
40. The antenna of an AM broadcast transmitter modulated by 50% is 11A. Find the carrier current.
 a. 9.25 A b. 10A
 c. 10.35 A d. 5.5 A

PART II

Chemistry

The product D has functional group

- a. amide b. alcoholic c. ether d. ester
42. Choose the correct statement from the following.
 a. BF_3 and NF_3 are covalent compounds and both are polar in nature
 b. BF_3 and NF_3 are covalent compounds but BF_3 is a non-polar, while NF_3 is polar compound
 c. BF_3 and NF_3 are covalent compounds but BF_3 is polar while NF_3 is a non-polar compound
 d. BF_3 and NF_3 are covalent compounds and both are non-polar in nature

43. The freezing point depression of a 1.00×10^{-3} m solution of $\text{K}_x[\text{Fe}(\text{CN})_6]$ is 7.10×10^{-3} K. Calculate the value of x . ($K_f = 1.86 \text{ K kg mol}^{-1}$ for H_2O)

a. 2 b. 3 c. 4 d. 1

44. Given below are several electronic configuration that may be correct for oxygen atom. Which of the following represents the ground state configuration for oxygen?

a. $\uparrow\downarrow \uparrow\downarrow \uparrow\downarrow \uparrow \text{ — } \downarrow$
 b. $\uparrow\downarrow \uparrow\downarrow \downarrow \downarrow \downarrow\downarrow \text{ — }$
 c. $\uparrow\downarrow \uparrow\downarrow \uparrow\downarrow \uparrow\downarrow \text{ — — }$
 d. $\uparrow\downarrow \uparrow\downarrow \uparrow\downarrow \uparrow \uparrow \text{ — }$
 1s 2s 2p 3s

The product P is

- a. acetone b. α, β -unsaturated ketone
 c. α, β -unsaturated acid d. None of these
46. The decreasing order of boiling points of the following is
 I. butanal II. butan-1-ol
 III. pentane IV. diethyl ether
 a. $\text{IV} > \text{III} > \text{II} > \text{I}$ b. $\text{IV} > \text{II} > \text{III} > \text{I}$
 c. $\text{II} > \text{I} > \text{IV} > \text{III}$ d. $\text{I} > \text{IV} > \text{II} > \text{III}$

47. Consider the following reaction,

The reagent is

- a. LAH b. $\text{B}_2\text{H}_6/\text{THF}$
 c. Both a and b d. None of these

The correct decreasing order of basic strengths of I, II and III is

- a. $\text{I} > \text{III} > \text{II}$ b. $\text{II} > \text{III} > \text{I}$
 c. $\text{I} > \text{II} > \text{III}$ d. $\text{II} > \text{I} > \text{III}$

49. Which of the following is/are correct?

- I. XeF_6 has lone pair of electron.
 - II. XeF_4 has two lone pairs of electrons with sp^3d^2 hybridisation.
 - III. XeOF_2 has dsp^2 -hybridisation.
 - IV. XeO_3 has square planar geometry.
- a. Only I
 - b. I and II
 - c. III and IV
 - d. Only IV

50. Which one undergoes fastest nucleophilic substitution reaction?

- a. Benzyl chloride
- b. Allyl chloride
- c. Formaldehyde
- d. Acetaldehyde

51. Match the following columns and choose the correct code given below.

Column I	Column II
P. $\text{H}_2(\text{g}) + \text{I}_2(\text{g}) \rightleftharpoons 2\text{HI}(\text{g})$	(i) $K_p = K_c(RT)$
Q. $\text{N}_2(\text{g}) + 3\text{H}_2(\text{g}) \rightleftharpoons 2\text{NH}_3(\text{g})$	(ii) $K_p = K_c(RT)^2$
R. $\text{PCl}_5(\text{g}) \rightleftharpoons \text{PCl}_3(\text{g}) + \text{Cl}_2(\text{g})$	(iii) $K_p = K_c(RT)^{-2}$
S. $\text{NH}_4\text{Cl}(\text{s}) \rightleftharpoons \text{NH}_3(\text{g}) + \text{HCl}(\text{g})$	(iv) $K_p = K_c$

Codes

- | | | | | | | | |
|----------|-------|------|-------|---------|-------|------|-------|
| P | Q | R | S | P | Q | R | S |
| a. (i) | (iii) | (iv) | (iii) | b. (iv) | (iii) | (i) | (ii) |
| c. (iii) | (iv) | (ii) | (i) | d. (i) | (iv) | (ii) | (iii) |

52.

What is the product of the following reaction?

- | | |
|----|----|
| a. | b. |
| c. | d. |

53.

Which one of the following statements is true about the reaction?

- a. Para isomer is major, if PhOK is used
- b. Ortho isomer is major, if PhONa is used
- c. Product formed is further used for preparation of drug aspirin
- d. All of the above

54. A mixture of solid SrSO_4 and solid BaSO_4 is shaken up with water until saturated equilibrium is established. Given that,

$$K_{\text{sp}}(\text{SrSO}_4) = 7.5 \times 10^{-7}, K_{\text{sp}}(\text{BaSO}_4) = 1.5 \times 10^{-9}$$

Then, the concentration of SO_4^{2-} is

- a. $8.52 \times 10^{-3} \text{ M}$
- b. $8.67 \times 10^{-4} \text{ M}$
- c. $1.73 \times 10^{-6} \text{ M}$
- d. $1.82 \times 10^{-4} \text{ M}$

55. The value of E° of some elements are as

On the basis of values of E° , which of the following reactions will be spontaneous?

- a. $\text{Sn}^{4+} + 2\text{Fe}^{2+} \longrightarrow \text{Sn}^{2+} + 2\text{Fe}^{3+}$
- b. $2\text{Fe}^{2+} + \text{I}_2 \longrightarrow 2\text{Fe}^{3+} + 2\text{I}^-$
- c. $\text{Sn}^{4+} + 2\text{I}^- \longrightarrow \text{Sn}^{2+} + \text{I}_2$
- d. $\text{Sn}^{2+} + \text{I}_2 \longrightarrow \text{Sn}^{4+} + 2\text{I}^-$

56.

What would be the product D in the above reaction sequence?

- a. 1° alcohol
- b. 2° alcohol
- c. 3° alcohol
- d. cyclohexene

57. The monomer of the polymer nylon-6, 10 is

- a. hexamethylene and sebacic acid
- b. hexamethylene and adipic acid
- c. caprolactum
- d. None of the above

58. A dye absorbs light ray of wavelength (λ) 4530 Å and re-emits radiation of wavelength 5080 Å. If we assume that 47% of energy absorbed is emitted, then the ratio of quanta emitted and absorbed is

- a. 0.231
- b. 0.527
- c. 0.412
- d. 0.612

59. On the basis of electronic configuration, if the ion X^{3-} has 14 electrons, then the number of electrons present in X^{2+} is

- a. 16
- b. 14
- c. 12
- d. 18

- The correct IUPAC name of compound X is

- 62.** Standard heat of formation (ΔH_f°) of PCl_5 and PCl_3 are x_1 and x_2 respectively. The ΔH° for the reaction $\text{PCl}_3(g) + \text{Cl}_2(g) \longrightarrow \text{PCl}_5(g)$ is

- 63.** A unit cell of sodium chloride has four formula units. Calculate the density of sodium chloride, if the edge length of the unit cell is 0.564 nm.

- 64.** Which of the following reactions occurs at the anode during the recharging of lead storage battery?

- $\text{PbSO}_4 + 2e^- \longrightarrow \text{Pb} + \text{SO}_4^{2-}$
- $\text{Pb} + \text{SO}_4^{2-} \longrightarrow \text{PbSO}_4 + 2e^-$
- $\text{Pb} + \text{PbO}_2 + \text{H}_2\text{SO}_4 \longrightarrow 2\text{PbSO}_4 + 2\text{H}_2\text{O}$
- $\text{PbSO}_4 + 2\text{H}_2\text{O} \longrightarrow \text{Pb} + \text{PbO}_2 + 2\text{H}_2\text{SO}_4 + 2e^-$

- 65.** Which of the following acids on heating loses a molecule of H_2O to form an α,β -unsaturated acid?

- a. HOCH_2COOH b. $\text{CH}_3\text{CHOHCH}_2\text{COOH}$
c. $\text{CH}_3\text{CHOHCOOH}$ d. $\text{HOCH}_2\text{CH}_2\text{CH}_2\text{COOH}$

- 66.** For a reaction,

Order of reaction w.r.t NO and H₂ respectively, are

- a. 1, 2 b. 1, 1 c. 1, 3 d. 2, 2

- 67.** The number of electrons exchanged in the reaction given below

68. $\text{HC}\equiv\text{CH} \xrightarrow[\text{NaNH}_2]{1 \text{ mol}} \text{A} \xrightarrow{\text{C}_2\text{H}_5\text{Br}} \text{B} \xrightarrow{\text{NaNH}_2} \text{C} \xrightarrow{\text{CH}_3\text{I}} \text{D}$
 Ethyne

The product D of the following reaction is

- a. pent-2-yne b. pent-2-ene
c. but-2-yne d. but-1-yne

- 69.** The separation of a racemic mixture into the pure enantiomers is known as

- a. resolution b. racemisation
c. isomerisation d. equilibration

- a. $2\text{CH}_3\text{CH}_2\text{OH}$, no reaction, $2\text{CH}_3\text{CH}_2\text{OH}$
 b. $2\text{CH}_3\text{CH}_2\text{OH}$, no reaction, no reaction
 c. $2\text{CH}_3\text{CH}_2\text{OH}$, $2\text{CH}_3\text{CH}_2\text{OH}$, $2\text{CH}_3\text{CH}_2\text{OH}$
 d. no reaction, no reaction, $2\text{CH}_3\text{CH}_2\text{OH}$

- 71.** Consider the following reaction,

- Formation of (I) and (II) proceeds via S_N1
- Formation of (I) proceeds via S_N1 while (II)
- Formation of (I) and (II) proceed via S_N2
- Formation of (I) proceed via, S_N2 while (II) via S_N1

- 72.** The equivalent mass of which of the following (underlined> is 8 g equiv^{-1} ?

- a. $\text{H}_3\text{PO}_4 + \text{Ca}(\text{OH})_2 \longrightarrow \text{CaHPO}_4 + 2\text{H}_2\text{O}$
 b. $\text{H}_3\text{PO}_4 + 3\text{NaOH} \longrightarrow \text{Na}_3\text{PO}_4 + 3\text{H}_2\text{O}$
 c. $\text{H}_3\text{PO}_4 + \text{NaOH} \longrightarrow \text{NaH}_2\text{PO}_4 + \text{H}_2\text{O}$
 d. $2\text{H}_2 + \text{O}_2 \longrightarrow 2\text{H}_2\text{O}$

- 73.** Analysis of chlorophyll shows that it contains 2.68 per cent magnesium. How many atoms of magnesium does 1.00 g of chlorophyll contain?

- a. 8.12×10^{21} b. 5.92×10^{21}
c. 6.72×10^{20} d. 5.21×10^{20}

- 74.** The artificial sweetener used in soft drinks is

- a. fructose
- b. cellulose
- c. glucose
- d. aspartame

75. Silver chloride dissolves in a solution of ammonia but not in water because
 a. ammonia is a stronger base than water
 b. ammonia is a better solvent than water
 c. silver ion forms a complex ion with ammonia
 d. the dipole moment of water molecule is higher than that of ammonia molecule
76. When NaCl or KCl is heated with conc. H_2SO_4 and solid $\text{K}_2\text{Cr}_2\text{O}_7$, the product is
 a. chromous chloride b. chromic chloride
 c. chromic sulphate d. chromyl chloride
77. The IUPAC name of the complex $\text{fac} - [\text{Co}(\text{CH}_3\text{NH}_2)_3\text{Cl}_3]$ is
 a. *fac*-trichlorotris(methylamine)cobalt(V)
 b. *fac*-trichlorotris(methylamine)cobalt(III)
 c. *tris*(methylamine)trichlorocobalt(III)
 d. *tris*(methylamine)trichlorocobalt(V)
78. Out of TiF_6^{2-} , CoF_6^{3-} , Cu_2Cl_2 and NiCl_4^{2-} , the colourless species are (Given atomic number of Ti = 22, Co = 27, Cu = 29 and Ni = 28)
 a. CoF_6^{3-} and NiCl_4^{2-} b. Cu_2Cl_2 and NiCl_4^{2-}
 c. TiF_6^{2-} and CoF_6^{3-} d. TiF_6^{2-} and Cu_2Cl_2
79. NH_3 has a net dipole moment but boron trifluoride (BF_3) has zero dipole moment, because
 a. F is more electronegative than H
 b. B is less electronegative than N
 c. NH_3 is pyramidal, while BF_3 is trigonal planar
 d. BF_3 is pyramidal, while NH_3 is planar
80. The antibiotic streptomycin is specific against which of the following disease?
 a. Typhoid b. Malaria
 c. AIDS d. Tuberculosis

PART III

a. English Proficiency

Directions (Q. Nos. 81 to 84) *Read the following passage carefully and choose the most suitable option from the given ones.*

An old man steel-rimmed spectacles and very dusty clothes sat by the side of the road. There was a pontoon bridge across the river and carts, truck and men, women and children were crossing it. The mule-drawn cart staggered up the steep bank from the bridge with soldiers helping to push against the spokes of the wheels. The truck wound up the away heading out of it all. The peasants plodded along in the ankle-deep dust. But the old man sat there without moving.

81. The term 'pontoon bridge' means
 a. a temporary bridge constructed with the help of ropes
 b. a bridge made by soldiers during a war
 c. a bridge supported by floating flat-bottomed boats
 d. a bridge made with wooden planks
82. The soldiers were 'helping to push against the spokes of the wheels' because
 a. they wanted to stop the carts
 b. the spokes of the wheels were broken
 c. the mules refused to draw the carts
 d. there was a steep elevation
83. The mule-drawn carts staggered up because
 a. there were too many mule-carts
 b. the mules were undisciplined
 c. it was a steep uphill journey
 d. the carts were blocked by the peasants
84. The reference to the old man in the beginning and the end of the passage indicates that
 a. the writer want to compare between the bridge and motionless old man
 b. the description that takes place between the first sentence and the last sentence is irrelevant

- c. there is an unnecessary repetition in the reference to the old man
 d. the figure of the old man is brought under a sharp focus

Directions (Q. Nos. 85 to 87) *In the following sentences, there is an error. Spot the error and indicate your answer.*

85. Order has been issued (a)/for his transfer to another district (b)/but he has not received them so far. (c)/No error (d)
86. Although she has studied (a)/English for almost a year (b)/she is yet to learn the alphabets. (c)/No error (d)
87. There are two scores of books (a)/which are lying (b)/unused in the library. (c)/No error (d)

Directions (Q. Nos. 88 to 90) *Find the word from the options that is synonym to the word written in capital letters.*

88. We should not allow ADVERSITY to discourage us.
 a. Poverty b. Darkness
 c. Time of trouble d. Unfriendly criticism
89. He is very OBLIGING by nature.
 a. Helpful b. Nice c. Thankful d. Compelling
90. She thought that RUNNING INTO her old friend was a strokes of fate.
 a. Meeting by chance b. Colliding
 c. Travelling with d. Quarrelling with

Directions (Q. Nos. 91 to 93) *Find the word from the options that is antonym to the word written in capital letters.*

91. The COMPLAINANT was not supportive of providing all facts in the court.
 a. Defendant b. Advocate
 c. Indulgence d. Servant

92. Living in a SOLITARY place brings in some kind of satisfaction.

- a. Limited b. Exotic
c. Healthy d. Populous

93. They spent a DISTURBED night after hearing the tragic news.

- a. Restless b. Sleepless
c. Mournful d. Peaceful

Directions (Q. Nos. 94 and 95) Find one word for the set of words given below.

94. One who knows everything.

- a. Pedantic b. Omniscient
c. Knowledgeous d. Educated

95. Aversion from water

- a. Hydrophobic b. Aquatic
c. Hydrophilic d. Exaquatic

b. Logical Reasoning

96. In a certain code, SOBER is written as RNADQ. How LOTUS can be written in that code?

- a. KNSTR b. MPUWT
c. KMSTR d. LMSRT

97. Find the missing number in the following figure.

- a. 5 b. 19 c. 27 d. 9

98. Find the missing number in the following figure.

- a. 5 b. 19 c. 27 d. 89

99. Find the figure will that replace the question mark (?).

Problem Figures

Answer Figures

100. Select a figure from the given four alternatives which when placed in the missing portion (?) of problem figure (X) would complete the pattern.

Problem Figure

Answer Figures

101. Mohit is 14th from the right end in a row of 40 boys. What is his position from the left end ?

- a. 24th
b. 25th
c. 27th
d. None of these

102. The number of triangles in the figure is

- a. 24 b. 21
c. 14 d. 11

103. Which of the following is the water image of the given figure?

Directions (Q.Nos. 104 and 105) Choose the odd one out.

104. a. Home
b. City
c. Town
d. Village
105. a. Parrot
b. Owl
c. Eagle
d. Hawk

PART IV

Mathematics

106. The sum of order and degree of the differential equation $y_3^{2/3} + 2 + 3y_2 + y_1 = 0$ is
 a. 2 b. 3 c. 4 d. 5
107. The solution of the inequation $\left(\frac{1}{3}\right)^{\frac{|x+2|}{2-|x|}} > 9$ is
 a. (2, 4) b. (4, 6) c. (2, 6) d. None
108. If $z^2 + z|z| + |z|^2 = 0$, then the locus of z is
 a. a circle b. an ellipse
 c. a pair of straight lines d. None of these
109. If α, β, γ are the roots of $x^3 - x^2 - 1 = 0$, then the value of $\frac{(1+\alpha)}{(1-\alpha)} + \frac{(1+\beta)}{(1-\beta)} + \frac{(1+\gamma)}{(1-\gamma)}$ is
 a. -2 b. -3 c. -4 d. -5
110. If AM, GM and HM of the first and last terms of the series 100, 101, 102, ..., $n-1, n$ are the terms of the series itself, then the value of n ($100 < n \leq 500$) is
 a. 200 b. 300 c. 400 d. 500
111. A train time table must be compiled for various days of the week, so that two trains twice a day depart for three days, one train daily for two days, and three trains once a day for two days. How many different time table can be compiled?
 a. 120 b. 210 c. 133 d. 72
112. If $C_0, C_1, C_2, \dots, C_n$ are the binomial coefficients, then $2 \times C_1 + 2^3 \times C_3 + 2^5 \times C_5 + \dots$ equals
 a. $\frac{3^n + (-1)^n}{2}$ b. $\frac{3^n - (-1)^n}{2}$ c. $\frac{3^n + 1}{2}$ d. $\frac{3^n - 1}{2}$
113. In $\triangle ABC$, if

$$\begin{vmatrix} 1 & 1 & 1 \\ \cot \frac{A}{2} & \cot \frac{B}{2} & \cot \frac{C}{2} \\ \tan \frac{B}{2} + \tan \frac{C}{2} & \tan \frac{C}{2} + \tan \frac{A}{2} & \tan \frac{A}{2} + \tan \frac{B}{2} \end{vmatrix} = 0,$$
 then the triangle must be
 a. equilateral b. isosceles
 c. obtuse d. None of these
114. If A and B are square matrices of the same order and A is non-singular, then for a positive integer n , $(A^{-1}BA)^n$ is equal to
 a. $A^{-n}B^nA^n$ b. $A^nB^nA^{-n}$
 c. $A^{-1}B^nA$ d. $n(A^{-1}BA)$
115. Consider $f(x) = x^3 + ax^2 + bx + c$. Parameters a, b and c are chosen, respectively, by throwing a die three times. Then, the probability that $f(x)$ is an increasing function, is
 a. $\frac{5}{36}$ b. $\frac{8}{36}$ c. $\frac{4}{9}$ d. $\frac{1}{3}$
116. If $[x]$ and $\{x\}$ represent integral and fractional parts of x , then the expression $[x] + \sum_{r=1}^{2000} \frac{\{x+r\}}{2000}$ is equal to
 a. $\frac{2001}{2}x$ b. $x + 2001$ c. x d. $[x] + \frac{2001}{2}$
117. The value of $\lim_{x \rightarrow 0^+} x^m (\log x)^n, m, n \in N$, is
 a. 0 b. m/n c. mn d. n/m
118. If $f(x) = \begin{cases} \frac{1-|x|}{1+x}, & x \neq 1 \\ 1, & x = -1 \end{cases}$, where $[]$ represents the greatest integer function, then $f([2x])$ is
 a. continuous at $x = -1$
 b. continuous at $x = 0$
 c. discontinuous at $x = \frac{1}{2}, 1$
 d. All of the above
119. If $f(x) = (1-x)^n$, then the value of $f(0) + f'(0) + \frac{f''(0)}{2!} + \dots + \frac{f^n(0)}{n!}$ is
 a. 2^n b. 0 c. 2^{n-1} d. None
120. Let $F(x) = f(x)g(x)h(x)$ for all real x , where $f(x), g(x)$ and $h(x)$ are differentiable functions. At some point x_0 , if $F'(x_0) = 21f(x_0), f'(x_0) = 4f(x_0), g'(x_0) = -7g(x_0)$ and $h'(x_0) = \lambda h(x_0)$, then λ is equal to
 a. 12 b. -12 c. 24 d. -24
121. If $y = 4x - 5$ is a tangent to the curve $y^2 = px^3 + q$ at (2, 3), then
 a. $p = 2, q = -7$ b. $p = -2, q = 7$
 c. $p = -2, q = -7$ d. $p = 2, q = 7$
122. If $f(x) = x^\alpha \log x$ and $f(0) = 0$, then the value of α for which Rolle's theorem can be applied in $[0, 1]$ is
 a. -2 b. -1 c. 0 d. 1/2
123. The minimum value of $27^{\cos 2x} \cdot 81^{\sin 2x}$ is
 a. 1/243 b. -5
 c. 1/5 d. 1/3
124. If $f(x) = x^3 + bx^2 + cx + d$ and $0 < b^2 < c$, then in $(-\infty, \infty)$
 a. $f(x)$ is strictly increasing function
 b. $f(x)$ has a local maxima
 c. $f(x)$ is a strictly decreasing function
 d. $f(x)$ is unbounded

125. $(1+x)^n \leq 1+x^n$, where
 a. $n > 1$ b. $0 \leq n \leq 1$ and $x > 0$
 c. $n > 1$ and $x > 0$ d. $x < 0$
126. If $y = f(x)$ makes positive intercepts of 2 units and 1 unit on x and y -coordinate axes and encloses an area of $3/4$ sq unit with the axes, then $\int_0^2 x f'(x) dx$ is
 a. $\frac{3}{2}$ b. 1 c. $\frac{5}{4}$ d. $-\frac{3}{4}$
127. $\int \sqrt{x-3} \{\sin^{-1}(\ln x) + \cos^{-1}(\ln x)\} dx$ is equal to
 a. $\frac{\pi}{3}(x-3)^{3/2} + C$ b. 0
 c. Does not exist d. None of these
128. Let f be a positive function. If $I_1 = \int_{1-k}^k x f\{x(1-x)\} dx$, $I_2 = \int_{1-k}^k f\{x(1-x)\} dx$, where $2k-1=0$, then $\frac{I_1}{I_2}$ is
 a. 2 b. k c. $1/2$ d. 1
129. The equation of the line which is parallel to the line common to the pair of lines given by $6x^2 - xy - 12y^2 = 0$ and $15x^2 + 14xy - 8y^2 = 0$ and at a distance of 7 units from it, is
 a. $3x - 4y = 35$ b. $5x - 2y = 7$
 c. $3x + 4y = 35$ d. $2x - 3y = 7$
130. If $ax + by = 1$ is tangent to the hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$, then $a^2 - b^2$ is equal to
 a. $1/a^2 e^2$ b. $a^2 e^2$
 c. $b^2 e^2$ d. None
131. The normal at a variable point P on the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ of eccentricity e meets the axes of the ellipse at Q and R . Then, the locus of the mid-point of QR is conic with eccentricity e' such that
 a. e' is independent of e b. $e' = 1$
 c. $e' = e$ d. $e' = \frac{1}{e}$
132. Let $y = f(x)$ be a parabola having its axis parallel to the Y -axis, which is touched by the line $y = x$ at $x = 1$, then
 a. $2f(0) = 1 - f'(0)$ b. $f(0) + f'(0) + f''(0) = 1$
 c. $f'(1) = 1$ d. $f'(0) = f'(1)$
133. In $\triangle ABC$, right-angled at A , on the leg AC as diameter, a semi-circle is described. If a chord joins A with the point of intersection D of the hypotenuse and semi-circle, then the length of AC is equal to
 a. $\frac{AB \cdot AD}{\sqrt{AB^2 + AD^2}}$ b. $\frac{AB \cdot AD}{AB^2 + AD^2}$
 c. $\sqrt{AB \cdot AD}$ d. $\frac{AB \cdot AD}{\sqrt{AB^2 - AD^2}}$
134. If the point $(a^2, a+1)$ lies in the angle between the lines $3x - y + 1 = 0$ and $x + 2y - 5 = 0$ containing the origin, then the value of a is
 a. $a \in (3, 0) \cap \left(1, \frac{1}{3}\right)$ b. $a \in (5, 0) \cap (0, 5)$
 c. $a \in (-3, 0) \cup \left(\frac{1}{3}, 1\right)$ d. None of these
135. If $\mathbf{a} = -\hat{i} + \hat{j} + \hat{k}$, $\mathbf{b} = 2\hat{i} + 0\hat{j} + \hat{k}$, then a vector $\mathbf{x}$ satisfying the conditions that it is coplanar with $\mathbf{a}$ and $\mathbf{b}$; perpendicular to $\mathbf{b}$ and $\mathbf{a} \cdot \mathbf{x} = 7$, is
 a. $-3\hat{i} + 5\hat{j} + 6\hat{k}$ b. $\frac{1}{2}(-3\hat{i} + 5\hat{j} + 6\hat{k})$
 c. $\frac{1}{2}(3\hat{i} + 5\hat{j} - 6\hat{k})$ d. $3\hat{i} - 5\hat{j} + 6\hat{k}$
136. Let $\mathbf{a} = \hat{i} - 2\hat{j} + 3\hat{k}$, $\mathbf{b} = 3\hat{i} + 3\hat{j} - \hat{k}$ and $\mathbf{c} = d\hat{i} + \hat{j} + (2d-1)\hat{k}$. If $\mathbf{c}$ is parallel to the plane of the vectors $\mathbf{a}$ and $\mathbf{b}$, then $11d$ is equal to
 a. 2 b. 1 c. -1 d. 0
137. If the vectors $\mathbf{a} = (2, \log_3 x, a)$ and $\mathbf{b} = (-3, a \log_3 x, \log_3 x)$ are inclined at an acute angle, then
 a. $a = 0$ b. $a < 0$ c. $a > 0$ d. None
138. The coordinates of the foot of the perpendicular drawn from the point $A(1, 0, 3)$ to the join of the points $B(4, 7, 1)$ and $C(3, 5, 3)$ are
 a. $(5/3, 7/3, 17/3)$ b. $(5, 7, 17)$
 c. $(5/7, -7/3, 17/3)$ d. $(-5/3, 7/3, -17/3)$
139. The solution set of the inequality $\log_3(x+2)(x+4) + \log_{1/3}(x+2) < (1/2)\log_{\sqrt{3}} 7$ is
 a. $(-2, -1)$ b. $(-2, 3)$ c. $(-1, 3)$ d. $(3, \infty)$
140. Let $A = \sin^8 \theta + \cos^{14} \theta$, then for every real θ ,
 a. $A \geq 1$ b. $0 < A \leq 1$
 c. $\frac{1}{2} < A \leq \frac{3}{2}$ d. None of these
141. If $y = (1 + \tan A)(1 - \tan B)$, where $A - B = \frac{\pi}{4}$, then $(y+1)^{y+1}$, is equal to
 a. 9 b. 4 c. 27 d. None
142. If $\frac{1}{6} \sin \theta, \cos \theta, \tan \theta$ are in GP, then θ is equal to $(n \in \mathbb{Z})$
 a. $2n\pi \pm \frac{\pi}{3}$ b. $2n\pi \pm \frac{\pi}{6}$
 c. $n\pi + (-1)^n \frac{\pi}{3}$ d. $n\pi + \frac{\pi}{3}$
143. $\sin^{-1}(\sin 5) > x^2 - 4x$ holds, if
 a. $x = 2 - \sqrt{9 - 2\pi}$
 b. $x = 2 + \sqrt{9 - 2\pi}$
 c. $x > 2 + \sqrt{9 - 2\pi}$
 d. $x \in (2 - \sqrt{9 - 2\pi}, 2 + \sqrt{9 - 2\pi})$

144. In $\triangle ABC$, if $a^2 + b^2 + c^2 = ac + ab\sqrt{3}$, then the triangle is
 a. equilateral b. isosceles
 c. right angled d. None of these
145. Let $f(x) = x^2$ and $g(x) = 2^x$. Then, the solution set of the equation $fog(x) = gof(x)$ is
 a. R b. $\{0\}$
 c. $\{0, 2\}$ d. None
146. The negation of the proposition "If a number is divisible by 15, then it is divisible by 5 or 3", is
 a. If a number is divisible by 15, then it is not divisible by 5 and 3
 b. A number is divisible by 15 and it is not divisible by 5 and 3
 c. A number is divisible by 15 and it is not divisible by 5 or 3
 d. A number is not divisible by 15 or it is not divisible by 5 and 3
147. If X is a binomial variate with parameters n and p , where $0 < p < 1$ such that $\frac{p(X=r)}{p(X=n-r)}$ is independent of n and r , then p equals
 a. $1/2$ b. $1/3$
 c. $1/4$ d. None of these
148. For $n \in N$, $x^{n+1} + (x+1)^{2n-1}$ is divisible by
 a. x b. $x+1$
 c. $x^2 + x + 1$ d. $x^2 - x + 1$
149. If mode of a data exceeds its mean by 12, then mode exceeds the median by
 a. 4 b. 8 c. 6 d. 10
150. In a series of $2n$ observations, half of them equal a and remaining half equal $-a$. If the standard deviation of the observations is 2, then $|a|$ equals
 a. $\frac{\sqrt{2}}{n}$ b. $\sqrt{2}$ c. 2 d. $\frac{1}{n}$

Practice Set 2

BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as follows Subject
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

Part I Physics	1-40
Part II Chemistry	41-80
Part III (a) English Proficiency	81-95
(b) Logical Reasoning	96-105
Part IV Mathematics	106-150

PART I

Physics

- Frequency f of oscillations of a mass m suspended from a spring of force constant k is given by $f = cm^x k^y$ where, c is a dimensionless constant. The values of x and y are
 - $x = -\frac{1}{2}, y = \frac{1}{2}$
 - $x = \frac{1}{2}, y = -\frac{1}{2}$
 - $x = -\frac{1}{2}, y = -\frac{1}{2}$
 - $x = \frac{1}{2}, y = \frac{1}{2}$
- Given $X = (Gh/c^3)^{1/2}$, where G, h and c are gravitational constant, Planck's constant and the velocity of light, respectively. Dimensions of X are the same as those of
 - mass
 - time
 - length
 - acceleration
- A projectile can have same range R for two angles of projection. If t_1 and t_2 be the time of flights in the two cases, then the product of time of flight is proportional to
 - $\frac{1}{R}$
 - $\frac{1}{R^2}$
 - R
 - R^2
- A body of mass m is accelerated uniformly from rest to a speed v in a time T . The instantaneous power delivered to the body as function of time is given by
 - $\frac{1}{2} \frac{mv^2}{T^2} t^2$
 - $\frac{1}{2} \frac{mv^2}{T^2} t$
 - $\frac{mv^2}{T^2} t^2$
 - $\frac{mv^2}{T^2} t$
- A ball of mass (m) 0.5 kg is attached to the end of a string having length (L) 0.5 m. The ball is rotated on a horizontal circular path about vertical axis. The maximum tension, the string can bear is 324 N. The maximum possible value of angular velocity of ball (in rad/s) is
 - 9
 - 18
 - 27
 - 36
- A sphere of mass 1 kg is connected to a spring of spring constant 5.0 Nm^{-1} as shown in figure. A force of 0.5 N is applied on the sphere along X-axis. What is the velocity of the sphere when it is displaced through a distance of 10 cm along X-axis ?
 - 0.11 ms^{-1}
 - 0.22 ms^{-1}
 - 0.11 cms^{-1}
 - 0.22 cms^{-1}

7. Two identical balls A and B , collide head on elastically. If velocities of A and B , before collision are $+0.5 \text{ ms}^{-1}$ and -0.3 ms^{-1} respectively, then their velocities after the collision, are respectively
- -0.5 ms^{-1} and $+0.3 \text{ ms}^{-1}$
 - $+0.5 \text{ ms}^{-1}$ and -0.3 ms^{-1}
 - $+0.3 \text{ ms}^{-1}$ and -0.5 ms^{-1}
 - -0.3 ms^{-1} and $+0.5 \text{ ms}^{-1}$
8. A rod PQ of mass M and length L is hinged at end P . The rod is kept horizontal by a massless string tied to point Q as shown in figure. When string is cut, the initial angular acceleration of the rod is

- $\frac{3g}{2L}$
 - $\frac{g}{L}$
 - $\frac{2g}{L}$
 - $\frac{2g}{3L}$
9. A satellite is moving with a constant speed v in a circular orbit about the earth. An object of mass m is ejected from the satellite such that it just escapes from the gravitational pull of the earth. At the time of its ejection, the kinetic energy of the object is
- $\frac{1}{2}mv^2$
 - mv^2
 - $\frac{3}{2}mv^2$
 - $2mv^2$
10. A solid sphere of volume (V) and density (ρ) floats at the interface of two immiscible liquids of densities ρ_1 and ρ_2 , respectively. If $\rho_1 < \rho < \rho_2$, then the ratio of the volume of the parts of the sphere in upper and lower liquids is
- $\frac{\rho + \rho_1}{\rho + \rho_2}$
 - $\frac{\rho - \rho_1}{\rho_2 - \rho}$
 - $\frac{\rho_2 - \rho}{\rho - \rho_1}$
 - $\frac{\rho + \rho_2}{\rho + \rho_1}$
11. Two rods of same material having same length and area. If heat ΔQ flows through them for 12 min when they are jointed side by side and now both rods are joined in, then the same amount of heat ΔQ will flow in
- 24 min
 - 18 min
 - 6 min
 - 3 min
12. A hole of area 1 mm^2 opens in the pipe near the lower end of a large water storage tank and a stream of water shoots from it. If the top of the water in the tank is 20 m above the point of the leak, then the amount of water escapes in 1 s is
- 87.5 cm^3
 - 43.1 cm^3
 - 27.5 cm^3
 - 19.8 cm^3
13. The pressure of a medium is changed from $1.01 \times 10^5 \text{ Pa}$ to 1.165 Pa and change in volume is 10% keeping temperature constant. The bulk modulus of the medium is
- $204.8 \times 10^5 \text{ Pa}$
 - $102.4 \times 10^5 \text{ Pa}$
 - $51.2 \times 10^5 \text{ Pa}$
 - $1.55 \times 10^5 \text{ Pa}$

14. A vessel contains 1 mole of O_2 gas (molar mass = 32) at a temperature T . The pressure of the gas is p . An identical vessel containing one mole of helium as (molar mass = 4) at a temperature $2T$ has a pressure of
- $\frac{p}{8}$
 - p
 - $2p$
 - $8p$
15. A refrigerator works between 2°C and 27°C . To keep the temperature of the refrigerated space constant, 660 calories of heat are to be removed every second. The power required is
- 60 W
 - 55 W
 - 252 W
 - 231 W
16. In an isothermal process, the pressure of a gas is decreased by 20%. The percentage change in the volume
- increase by 20%
 - decrease by 20%
 - increase by 25%
 - decrease by 25%
17. An object suspended from a spring exhibits oscillations of period T . Now, the spring is cut in two halves and the same object is suspended with two halves as shown in figure. The new period of oscillation will become

- $\frac{T}{2\sqrt{2}}$
 - $\frac{T}{2}$
 - $\frac{T}{\sqrt{2}}$
 - T
18. Four particles each having charge q are placed on the four vertices of a regular pentagon as shown in figure. The distance of each corner from the centre is a . The electric field at the centre of the pentagon is

- $\frac{1}{4\pi\epsilon_0} \frac{q}{a^2}$ along OE
 - $\frac{1}{4\pi\epsilon_0} \frac{q}{a^2}$ along EO
 - $\frac{1}{4\pi\epsilon_0} \frac{q}{a^2}$
 - None of these
19. Two equal charges q are kept fixed at a and $+a$ along X -axis. A particles of mass m and charge $\left(\frac{q}{2}\right)$ is brought to the origin and given a small displacement along the X -axis, then
- the particle executes oscillatory motion
 - the particle remains stationary
 - the particle executes, SHM along X -axis
 - the particle executes SHM along Y -axis

20. Consider a non-spherical conductor shown in the figure which is given a certain amount of positive charge. The charge distributes itself on the surface such that the charge densities are σ_1 , σ_2 and σ_3 at regions 1, 2 and 3 respectively.

Then,

- a. $\sigma_1 > \sigma_2 > \sigma_3$ b. $\sigma_2 > \sigma_3 > \sigma_1$
 c. $\sigma_3 > \sigma_1 > \sigma_2$ d. $\sigma_2 > \sigma_1 > \sigma_3$
21. Two batteries A and B each of emf $2V$ are connected in series to an external resistance $R = 1\Omega$. If the internal resistance of battery A is 1.9Ω and that of B is 0.9Ω . What is the potential difference between the terminals of battery A?

- a. $2V$ b. $3.8V$
 c. Zero d. None of these
22. 32 cells each of emf $3V$ are connected in series and kept in a box. Externally, the combination shows $84V$. The number of cells reversed in the connection is
- a. 0 b. 2 c. 8 d. 16
23. In the circuit, the voltmeter resistance is 10000Ω and the ammeter resistance is 2Ω . The voltmeter reads $12V$ and ammeter reads $0.1A$. The value of R is

- a. 118Ω b. 122Ω c. 10022Ω d. 10018Ω
24. In the circuit shown in figure, the heat produced in 5Ω resistor due to a current flowing in it is 10 cal s^{-1} . The heat produced in 4Ω resistor is

- a. 1 cal/s b. 2 cal/s c. 3 cal/s d. 4 cal/s
25. Force per unit length between parallel wires in the circuit is $3.6 \times 10^{-3} \text{ N/m}$. Resistance of the circuit is

- a. 3Ω b. 1.5Ω c. 4.5Ω d. 6Ω

26. A conducting loop carrying a current I is placed in xy -plane. A uniform magnetic field pointing into Z -direction is switched on. The loop will have a tendency to

- a. contract
 b. expand
 c. move towards +ve X -axis
 d. move towards -ve X -axis
27. The magnetic susceptibility of a paramagnetic material at -73°C is 0.0075 , its value at -173°C will be
- a. 0.0045 b. 0.0030
 c. 0.015 d. 0.0075
28. Two similar poles of 60 Am and 240 Am are 12 cm apart. The magnetic field is zero at a position on the line joining them at
- a. 4 cm from 60 Am b. 6 cm from 240 Am
 c. 3 cm from 60 Am d. 8 cm from 240 Am
29. A conducting circular loop is placed in a uniform magnetic field 0.04 T with its plane perpendicular to the magnetic field. The radius of the loop starts shrinking at 2 mm/s . The induced emf in the loop when the radius is 2 cm is
- a. $4.8 \pi \mu\text{V}$ b. $0.8 \pi \mu\text{V}$
 c. $1.6 \pi \mu\text{V}$ d. $3.2 \pi \mu\text{V}$
30. An AC voltage, $e = 200 \sin 100t$ is applied to a series combination of $R = 30\Omega$ and an inductor of 400 mH . The power factor of the circuit is
- a. 0.01 b. 0.2 c. 0.5 d. 0.6
31. The network shown in figure is a part of a circuit. What is the potential difference $V_B - V_A$, when current I is $5A$ and is decreasing at a rate of 10^3 As^{-1} ?

- a. $10V$ b. $5V$
 c. $15V$ d. $20V$
32. In a two slit experiment, with monochromatic light, fringes are obtained on a screen placed at some distance from the slits. If the screen is moved by $5 \times 10^{-2} \text{ m}$ towards the slits, the change in fringe width is 10^{-2} m . Then, the wavelength of light used when distance between slits is 0.3 mm will be
- a. $4000 \text{ \AA}$ b. $6000 \text{ \AA}$
 c. $5000 \text{ \AA}$ d. $7000 \text{ \AA}$

33. The intensity of the central fringe due to the interference of light from two similar slits is I . When one of the slit is closed, the intensity is I_0 . What is the relation between I and I_0 ?
 a. $I = 4I_0$ b. $I = 2I_0$
 c. $I = I_0$ d. $I = I_0/2$
34. Which one of the following showing correct relationship between power of a lens and wavelength of incident light?
- a.  b. 
- c.  d. 
35. The surface of a metal is illuminated with the light of 400 nm. The kinetic energy of the ejected photo electrons was found to be 1.68 eV. The work function of the metal is
 a. 1.41 eV b. 1.51 eV c. 1.68 eV d. 3.09 eV
36. If the wavelength of the first line of the Balmer series of hydrogen is 6561 Å, the wavelength of the second line of the series should be
 a. 1312 Å b. 3280 Å c. 4860 Å d. 2187 Å
37. Half-life of radioactive substance is 140 days. Initially, the mass of radioactive substance is 16g. Calculate the time for this substance when it reduces to 1g.
 a. 140 days b. 280 days
 c. 420 days d. 560 days
38. When a hydrogen atom emits a photon in going from $n = 5$ to $n = 1$, its recoil speed is almost
 a. 10^{-4} ms^{-1} b. $8 \times 10^2 \text{ ms}^{-1}$
 c. $2 \times 10^{-2} \text{ ms}^{-1}$ d. 4 ms^{-1}
39. In the ratio of the concentration of electrons and of holes in a semiconductor is 7/5 and the ratio of current is 7/4, then what is the ratio of their drift velocities ?
 a. $\frac{4}{7}$ b. $\frac{5}{8}$ c. $\frac{4}{5}$ d. $\frac{5}{4}$
40. An 80 MHz carrier is modulated by 400 Hz sine wave. The carrier voltage is 5V and the frequency deviation is 20 kHz. Find modulation index.
 a. 25 b. 50 c. 400 d. 5

PART II

Chemistry

41. On heating 1.763 g hydrated $\text{BaCl}_2 \cdot x\text{H}_2\text{O}$, 1.505 g anhydrous salt is obtained. The number of water molecules in $\text{BaCl}_2 \cdot x\text{H}_2\text{O}$ is
 a. 3 b. 2 c. 5 d. 1
42. The electron represented by the following sets of quantum numbers:
 I. $n = 4, l = 0, m_l = 0, m_s = +1/2$
 II. $n = 3, l = 1, m_l = 1, m_s = -1/2$
 III. $n = 3, l = 2, m_l = 0, m_s = +1/2$
 IV. $n = 3, l = 0, m_l = 0, m_s = -1/2$
 The correct increasing order of energy is
 a. IV > I > II > III b. III > I > II > IV
 c. II > I > IV > III d. I > IV > III > II
43. The phenol is not obtained in which of the following?
- a.  b. 
- c.  d. 
44. Determine the enthalpy change that occurs in the following isomerisation reaction,
 Propene (g) $\longrightarrow$ Cyclopropane (g)
 If BE (C—C) = 348 kJ/mol and BE (C=C) = 615 kJ/mol
 a. 81 kJ/mol b. -81 kJ/mol
 c. 75 kJ/mol d. -75 kJ/mol
45. In the sequence of reaction,
 $(\text{CH}_3)_2\text{CHOH} \xrightarrow[\text{Oxidation [O]}]{\text{Mild}} \text{X} \xrightarrow[\text{(ii) Hydrolysis}]{\text{(i) CH}_3\text{MgI}} \text{Y}$, Y is
 a. tertiary butyl alcohol b. n-butyl alcohol
 c. isobutylene d. isobutyl alcohol
46. The (—COOH) group is not present in which of the following?
 a. Benzoic acid b. Picric acid
 c. Aspirin d. All have (—COOH) group
47. Ethanamine is treated with nitrous acid at ordinary temperature, then the product will be
 a. only ethanol
 b. acetic acid, ethane and H_2O
 c. ethanol, ethene, N_2 and H_2O
 d. ethanol, acetic acid, N_2 and H_2O

48. Choose the correct statement from the following.

- H₂S and SO₂ both act as oxidising and reducing agent
- H₂S acts only as reducing agent while SO₂ acts both as oxidising and reducing agent
- H₂S acts only as oxidising agent while SO₂ acts as reducing agent
- SO₂ acts only as oxidising agent while H₂S acts both as oxidising and reducing agent

49. The weight of CaO required to remove hardness of 10⁶ L of water containing 1.62 g of Ca(HCO₃)₂ in 1L, is (M_W of Ca(HCO₃)₂ = 162 and M_W of CaO = 56)

- 5.6×10^2 mg
- 5.6×10^5 g
- 4.2×10^4 mg
- 4.2×10^4 g

50. For concentration of sulphide ores, froth floatation process is used which is based on

- specific gravity of ore particles
- electrical properties of ore particles
- wetting properties of ore particles
- magnetic properties of ore particles

51. Which of the following will show optical activity?

- trans*-[Co(NH₃)₄Cl₂]⁺
- trans*-[Co(NH₃)₂(en)₂]³⁺
- [Cr(H₂O)₆]³⁺
- cis*-[Co(NH₃)₂(en)₂]³⁺

52.

The reagent A is

- NaBH₄ + PtCl₄
- (i) N₂H₄ / H⁺ (ii) C₂H₅O⁻Na⁺
- Zn – Hg / HCl
- LAH + AlCl₃

53. The geometry of [Ni(CN)₄]²⁻, [NiCl₄]²⁻ and [Ni(CO)₄] are

- [Ni(CN)₄]²⁻ is square planar and [Ni(CN)₄]²⁻, [Ni(CO)₄] are tetrahedral
- [Ni(CN)₄]²⁻ is square planar, [NiCl₄]²⁻ and [Ni(CO)₄] are tetrahedral
- [Ni(CO)₄] is square planar, [Ni(CN)₄]²⁻ and [NiCl₄]²⁻ are tetrahedral
- None of the above

54. The volume of 3.7 g of a gas at 25°C and volume of 0.184 g of H₂ gas at 17°C are same at same pressure. The molecular mass of gas is

- 52
- 41
- 45
- 55

55. The emf of the following cell is 0.81 V.

Then, the value of n for metal ion is

- 1
- 4
- 2
- 3

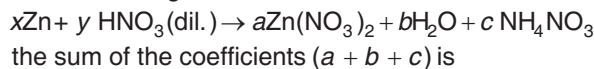

56. Consider the reaction given below,

The alkali metal A is

- K
- Li
- Na
- Cs

57. In the following reaction,

- 6
- 8
- 4
- 5

58. Arrange the following three chlorides in decreasing order of reactivity towards S_N1 reaction.

- II > III > I
- III > II > I
- I > II > III
- II > I > III

59. The % CaSO₄ in the sample containing 0.455 g sample of plaster of Paris $\left(CaSO_4 \cdot \frac{1}{2} H_2O \right)$, when treated with excess of Ba(NO₃)₂ gave 0.617 g of anhy, BaSO₄ is

- 87%
- 92%
- 80%
- 75%

60. Choose the incorrect statement from the following.

- Chlorine is less selective and more reactive
- Vinyl free radical is more stable than allyl free radical
- Bromine is more selective and less reactive
- Benzyl free radical is more stable than allyl free radical

The relation between bond lengths a and b is

- $a = b$
- $b < a$
- $b > a$
- impossible to predict

62. The maximum number of emission lines when the excited electron of a H-atom in $n=6$ drops to the ground state is

- 14
- 36
- 15
- 10

63. Choose the correct option from the following in case of van der Waals' adsorption.

- High temperature, low pressure
- High temperature, high pressure
- Low temperature, low pressure
- Low temperature, high pressure

64. If the solubility of calcium carbonate in water is 0.0305 g/L, then its solubility product is

a. 8.40×10^{-6} b. 9.30×10^{-8}
c. 7.21×10^{-8} d. 9.21×10^{-7}

The product P is

a. $\text{CH}_3\text{—}\overset{\text{O}}{\parallel}\text{C—CH}_3$ b. $\text{CH}_3\text{—CH}_2\text{—CH}_3$
c. $\text{CH}_3\text{—}\overset{\text{O}}{\parallel}\text{C—O—C}_2\text{H}_5$ d. $\text{CH}_3\text{—}\overset{\text{OH}}{\underset{\text{CH}_3}{\text{C}}}\text{—CH}_3$

66. On applying pressure to the equilibrium,

Which phenomenon will happen?

a. More ice will be formed
b. More water will be formed
c. Water will evaporate
d. Equilibrium will not be disturbed

67. From the reaction,

which of the following statements is correct?

a. Red P is readily formed from white P
b. White P is readily formed from red P
c. White P cannot be converted to red P
d. White P can be converted into red P and red P is more stable

68. From which of the following mixtures, buffer solution can be prepared?

a. $\text{NaH}_2\text{PO}_4 + \text{Na}_2\text{HPO}_4$ b. $\text{NH}_4\text{OH} + \text{NH}_3$
c. $\text{HCl} + \text{NaCl}$ d. $\text{CH}_3\text{COOH} + \text{NaCl}$

69. Which of the following has regular tetrahedral structure?

a. SF_4 b. XeF_4
c. $[\text{Ni}(\text{CN})_4]^{2-}$ d. BF_4^-

70. If the reaction rate at a given temperature becomes slower, then

a. the entropy changes
b. the initial concentration of the reactants remains constant
c. the free energy of activation is lower
d. the free energy of activation is higher

71. The number of sigma and pi-bonds in peroxydisulphuric acid respectively are

a. 10 and 4 b. 11 and 4 c. 13 and 2 d. 11 and 2

72. Calculate the resonance energy of benzene, if the enthalpy of hydrogenation of benzene is ΔH_1 and for cyclohexene, it is ΔH_2 .

a. $\Delta H_1 - 3\Delta H_2$ b. $3\Delta H_2 - \Delta H_1$
c. $3\Delta H_1 - \Delta H_2$ d. $3\Delta H_1 + \Delta H_2$

73. Which one of the following order is not in accordance with the property stated against it?

a. $\text{F}_2 > \text{Cl}_2 > \text{Br}_2 > \text{I}_2$: Oxidising power
b. $\text{F}_2 > \text{Cl}_2 > \text{Br}_2 > \text{I}_2$: Electronegativity
c. $\text{F}_2 > \text{Cl}_2 > \text{Br}_2 > \text{I}_2$: Bond dissociation energy
d. $\text{HI} > \text{HBr} > \text{HCl} > \text{HF}$: Acidic property in water

74. In corundum, oxide ions are arranged in hcp array and the aluminium ions occupy two-thirds of octahedral voids. The formula of corundum is

a. Al_2O_3 b. Al_3O_2
c. Al_2O_6 d. Al_2O_4

75. The freezing point depression of 0.1 molar solution of acetic acid in benzene is 0.256 K. K_f for benzene is $5.12 \text{ K kg mol}^{-1}$. What conclusion can you find about the molecular state of acetic acid in benzene?

a. Benzene is doubly associated
b. Acetic acid is doubly associated
c. Both are equally associated
d. None of the above

76. Which of the following is not an addition homopolymer?

a. PVC b. Teflon
c. SBR d. Natural rubber

77. Choose the correct structure of the drug paracetamol.

78. The same osazone is formed by which of the following pairs?

a. Glucose and fructose b. Glucose and galactose
c. Glucose and arabinose d. Lactose and maltose

79. The rate of change of rms speed of a gas is twice the rate of change of absolute temperature. Then, the rms speed of Ne is (Atomic mass of Ne = 20)

a. 344 ms^{-1} b. 302 ms^{-1} c. 381 ms^{-1} d. 312 ms^{-1}

80. The absolute configurations of the centres (1 and 2) in the molecule given below are

PART III

a. English Proficiency

Directions (Q. Nos. 81 to 84) *Read the passage and choose the most suitable option from the given options.*

When vegetation sprouts in the desert, it is a good sign but when the ice in the Arctic and Antarctic begins to turn green, there is something terribly wrong. Reports say that an iceberg, approximately the size of New York city, has broken off from the icy continent. An Argentine team discovered huge cracks in the polar ice caps. These developments can have serious implications. If polar ice fields melt, our coastal cities might be submerged and sea levels across the world could rise between 3.65 m and 6.09 m in different parts of the Earth. This is probably due to global warming.

81. What can be considered as a 'Good sign' in the desert ?
 a. When shrubs and trees grow there
 b. When it shows in the desert
 c. When ice caps melt and there is water
 d. When there is vegetation found in the desert
82. The melting of ice fields in the Arctic and Antarctic regions is dangerous because
 a. the ice will turn green and poisonous
 b. it will cause huge floods which will destroy coastal regions
 c. it will create global warming and will badly affect our climate
 d. huge cracks will develop all over the world
83. Polar ice caps develop huge cracks because
 a. of the movement of the Earth
 b. of the breaking off of Earth
 c. of the crowding of cities like New York
 d. of rising temperatures
84. What do you think about the intention of the author?
 a. To describe strange phenomena in nature
 b. To report findings of research teams working in the polar regions
 c. To make us aware of the dangers of global warming
 d. To compare development in deserts and Arctic regions caused by global warming

Directions (Q. Nos. 85 to 88) *Rearrange the jumbled up parts of the sentence to make it meaningful and then choose the most suitable option.*

85. It seemed to him
 P : like seeing one's reflection
 Q : an endless quest
 R : two mirrors
 S : while standing between
 The proper sequence should be
 a. PRSQ b. SPQR
 c. RSPQ d. QPSR

86. A series of shocks
 P : is known as earthquake
 Q : which can be recognised through seismic waves.
 R : that result from sudden Earth movements or tremors
 S : causing widespread destruction of life and property
 The proper sequence should be
 a. PQRS b. RPQS c. RSPQ d. RQSP

87. P : in this world
 Q : a man has
 R : it is possible that the best friend
 S : may turn against him
 The proper sequence should be
 a. QPRS b. PQRS c. RQPS d. QRSP

88. P : in estimating the size of the earth but they were
 Q : hampered by the lack of instruments of precision
 R : ancient astronomers
 S : used method which were theoretically valid
 The proper sequence should be
 a. RPQS b. PRQS
 c. RSQP d. RPSQ

Directions (Q. Nos. 89 to 91) *Spot the error in the given sentence and indicate your answer.*

89. Children are prone (a)/ to making mischiefs (b)/ if they have nothing to do. (c)/ No error (d)
90. Sheeps are economically useful(a)/ and so they are reared (b)/ in the hills. (c)/ No error (d)
91. I have not gone through (a)/ the letter and so I am not aware (b)/ of its content. (c)/ No error (d)

Directions (Q. Nos. 92 and 93) *Find the synonym of the word written in capital letters.*

92. The convict's **INGENUOUS** explanation brought tears in every eye.
 a. Candid b. Secret c. Insincere d. Consistent
93. The **ENORMITY** of the population problem is irksome.
 a. Intensity b. Vastness c. Cruelty d. Fragility

Directions (Q. Nos. 94 and 95) *Find the antonym of the word written in capital letters.*

94. We have **CREATED** a beautiful new house from out of the old ruin.
 a. Destroyed b. Built
 c. Constructed d. Planned
95. A large number designer clothes are **REVOLTING**.
 a. Inviting b. Beautiful
 c. Fashionable d. Delightful

b. Logical Reasoning

96. Choose the odd one out.

- a. BDFH b. MOQS
c. SUWY d. TUZE

97. Find the missing number.

- a. 12 b. 25 c. 48 d. 52

98. Find the figure that would replace the question mark (?)

Problem Figures

Answer Figures

99. If KASHMIR written as 8142753, how RIMSHAK can be written in that code?

- a. 3574218 b. 3571842
c. 3521478 d. 3574812

100. If 'PAPER' is written as 'OZODQ' how 'PENCIL' can be written in that code?

- a. QFODJM b. OFOBHM c. ODMDJM d. ODMBHK

101. Which one of the following diagram best depicts the relationship among elephants, wolves, and animals?

102. Which figure from the given alternatives will replace the question mark (?)

Problem Figures

Answer Figures

103. How many different triangles are there in the figures shown below ?

- a. 28 b. 24 c. 20 d. 16

104. Find the wrong number in the series.

1, 9, 36, 81, 99, 121

- a. 1 b. 121
c. 99 d. 36

105. In the following question, select a figure from amongst the four alternatives, which when placed in the blank space of figure (X) would complete the pattern.

Problem Figure

Answer Figures

Mathematics

- 106.** The integrating factor of the differential equation $\frac{dy}{dx} + y = \frac{1+y}{x}$ is

 - $\frac{x}{e^x}$
 - $\frac{e^x}{x}$
 - xe^x
 - e^x

107. Let α and β be the roots of $x^2 - 6x - 2 = 0$ with $\alpha > \beta$. If $a_n = \alpha^n - \beta^n$ for $n \geq 1$, then the value of $\frac{a_{10} - 2a_8}{2a_9}$ is

 - 1
 - 2
 - 3
 - 4

108. Let $a_1, a_2, a_3, \dots, a_{100}$ be an arithmetic progression with $a_1 = 3$ and $S_p = \sum_{i=1}^p a_i$, $1 \leq p \leq 100$. For any integer n with $1 \leq n \leq 20$, let $m = 5n$. If $\frac{S_m}{S_n}$ does not depend on n , then a_2 equals

 - 6
 - 5
 - 7
 - 4

109. If r, s, t are prime numbers and p, q are the positive integers such that the LCM of p, q is $r^2 t^4 s^2$, then the number of ordered pair (p, q) is

 - 252
 - 254
 - 225
 - 224

110. The expression $[x + (x^3 - 1)^{1/2}]^5 = [x - (x^3 - 1)^{1/2}]^5$ is a polynomial of degree

 - 5
 - 6
 - 7
 - 8

111. Let a, b and c be three real numbers satisfying

$$\begin{bmatrix} a & b & c \end{bmatrix} \begin{bmatrix} 1 & 9 & 7 \\ 8 & 2 & 7 \\ 7 & 3 & 7 \end{bmatrix} = \begin{bmatrix} 0 & 0 & 0 \end{bmatrix}.$$

If the point (a, b, c) with reference to (E) lies on the plane $2x + y + z = 1$, then the value of $7a + b + c$ is

 - 0
 - 12
 - 7
 - 6

112. The determinant $\begin{vmatrix} xp + y & x & y \\ yp + z & y & z \\ 0 & xp + y & yp + z \end{vmatrix} = 0$, if

 - x, y, z are in AP
 - x, y, z are in GP
 - x, y, z are in HP
 - xv, vz, zx are in AP

113. A bag contains n balls out of which some balls are white. If probability that a bag contains exactly i white ball is proportional to i^2 . A ball is drawn at random from the bag and found to be white, then find the probability that bag contains exactly 2 white balls.

 - $\frac{\left[\frac{6}{n(n+1)} \right] \left(\frac{2^3}{n} \right)}{\frac{2}{3(n+1)}}$
 - $\frac{2}{\left[\frac{6}{n(n+1)} \right] \left(\frac{2^3}{n} \right)}$
 - $\frac{\left(\frac{6}{n} \right) \left[\frac{2^3}{n(n+1)} \right]}{\frac{2}{3n}}$
 - None of these

114. The domain of definition of $f(x) = \cos^{-1}(x + [x])$ is

 - $[0, 1]$
 - $R - Z$
 - $(0, \infty)$
 - None

115. Let $f : R \rightarrow R$ be given by $f(x + y) = f(x) - f(y) + 2xy + 1$ for all $x, y \in R$. If $f(x)$ is everywhere differentiable and $f'(0) = 1$, then $f'(x)$ is equal to

 - $2x + 1$
 - $2x - 1$
 - $x + 1$
 - $x - 1$

116. $\frac{d^2y}{dx^2}$ is equal to

 - $\left(\frac{d^2y}{dx^2} \right)^{-1}$
 - $-\left(\frac{d^2y}{dx^2} \right) \left(\frac{dy}{dx} \right)^{-3}$
 - $\left(\frac{d^2y}{dx^2} \right) \left(\frac{dy}{dx} \right)^{-2}$
 - $-\left(\frac{d^2y}{dx^2} \right) \left(\frac{dy}{dx} \right)^{-3}$

117. The equation of a curve is $y = f(x)$. The tangents at $(1, f(1))$, $(2, f(2))$ and $(3, f(3))$ makes angles $\frac{\pi}{6}, \frac{\pi}{3}$ and $\frac{\pi}{4}$ respectively with the positive direction of the X-axis. Then, the value of $\int_2^3 f'(x)f''(x) dx + \int_1^3 f'''(x) dx$ is equal to

 - $-\frac{1}{\sqrt{3}}$
 - $\frac{1}{\sqrt{3}}$
 - 0
 - 1

118. If $f(x) = \int_x^{x^2} \frac{1}{(\log t)^2} dt$; $x \neq 0, x \neq 1$, then $f(x)$ is monotonically

 - increasing on $(2, \infty)$
 - increasing on $(1, 2)$
 - decreasing on $(2, \infty)$
 - decreasing on $(0, 3)$

119. If $\int \log(\sqrt{1-x} + \sqrt{1+x}) dx = x f(x + B \sin^{-1} x + C)$, then
 a. $f(x) = \log(\sqrt{1-x} + \sqrt{1+x})$
 b. $A = 1/3$
 c. $B = 2/3$
 d. $B = -1/2$
120. If $I = \int_0^1 \frac{1}{1+x^{\pi/2}} dx$, then
 a. $\ln 2 < I < \frac{\pi}{4}$
 b. $I < \ln^2$
 c. $I > \frac{\pi}{4}$
 d. None of these
121. The area between the curve $y = 2x^4 - x^2$, the X-axis and the ordinates of two minima of the curve is
 a. $7/120$ sq unit
 b. $9/120$ sq unit
 c. $11/120$ sq unit
 d. $13/120$ sq unit
122. Let $\mathbf{a} = \hat{i} + \hat{j} + \hat{k}$ and $\mathbf{r}$ be a variable such that $\mathbf{r} \cdot \hat{i}$, $\mathbf{r} \cdot \hat{j}$ and $\mathbf{r} \cdot \hat{k}$ are positive integers. If $\mathbf{r} \cdot \mathbf{a} \leq 12$, then the total number of such vectors is
 a. ${}^{12}C_3$
 b. ${}^{12}C_4$
 c. ${}^{12}C_9 - 1$
 d. ${}^{12}C_8$
123. Given, $|\mathbf{a}| = |\mathbf{b}| = 1$ and $|\mathbf{a} + \mathbf{b}| = \sqrt{3}$. If $\mathbf{c}$ is a vector such that $\mathbf{c} - \mathbf{a} - 2\mathbf{b} = 3(\mathbf{a} \times \mathbf{b})$, then $\mathbf{c} \cdot \mathbf{b}$ is equal to
 a. $-\frac{1}{2}$
 b. $\frac{1}{2}$
 c. $\frac{3}{2}$
 d. $\frac{5}{2}$
124. If the plane $\frac{x}{2} + \frac{y}{3} + \frac{z}{4} = 1$ cuts the coordinate axes at A, B, C , then the area of $\triangle ABC$ is
 a. $\sqrt{29}$ sq units
 b. $\sqrt{41}$ sq units
 c. $\sqrt{61}$ sq units
 d. $\sqrt{71}$ sq units
125. If d_1, d_2, d_3 denote the distance of the plane $2x - 3y + 4z + 2 = 0$ from the planes $2x - 3y + 4z + 6 = 0$, $4x - 6y + 8z + 3 = 0$ and $2x - 3y + 4z - 6 = 0$ respectively, then
 a. $d_1 + 8d_2 + d_3 = 0$
 b. $d_1 + 16d_2 = 0$
 c. $8d_2 = d_1$
 d. $d_1 - 2d_2 + 3d_3 = \sqrt{29}$
126. The median of the series 8, 12, 15, 7, x, 19, 22 lies in the interval
 a. $[12, 15]$
 b. $[7, 15]$
 c. $[15, 17]$
 d. $[9, 12]$
127. The variable X takes two values x_1 and x_2 with frequencies f_1 and f_2 respectively. If σ denotes the standard deviation of X , then σ^2 is equal to
 a. $\frac{f_1^2 x_1^2 + f_2^2 x_2^2}{f_1 + f_2} - \left(\frac{f_1 x_1 + f_2 x_2}{f_1 + f_2} \right)^2$
 b. $\frac{f_1 f_2}{(f_1 + f_2)^2} (x_1 - x_2)^2$
 c. $\frac{f_1 f_2}{(f_1 - f_2)^2} (x_1 - x_2)^2$
 d. None of the above
128. If $S = \{x \in N : 2 + \log_2 \sqrt{x+1} > 1 - \log_{1/2} \sqrt{4-x^2}\}$, then
 a. $S = \{1\}$
 b. $S = Z$
 c. $S = N$
 d. None
129. The area of the parallelogram contained by the lines $4y - 3x - a = 0$, $3y - 4x + a = 0$, $4y - 3x - 3a = 0$ and $3y - 4x + 2a = 0$ is
 a. $\frac{2}{7} a^2$ sq units
 b. $\frac{3}{8} a^2$ sq units
 c. $2a^2$ sq units
 d. $\frac{5}{4} a^2$ sq units
130. The two circles which pass through $(0, a)$ and $(0, -a)$ touch the line $y = mx + c$, will intersect each other at right angle, if
 a. $a^2 = c^2(2m+1)$
 b. $a^2 = c^2(2+m^2)$
 c. $c^2 = a^2(2+m^2)$
 d. $c^2 = a^2(2m+1)$
131. Two mutually perpendicular tangents of the parabola $y^2 = 4ax$ meet the axis at P_1 and P_2 . If S is the focus of the parabola, then $\frac{1}{SP_1} + \frac{1}{SP_2}$ is equal to
 a. $\frac{4}{a}$
 b. $\frac{2}{a}$
 c. $\frac{1}{a}$
 d. $\frac{1}{4a}$
132. Tangents are drawn to the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$, ($a > b$) and the circle $x^2 + y^2 = a^2$ at the points, where a common ordinate cuts them (on the same side of X-axis). Then, the greatest acute angle between these tangents is given by
 a. $\tan^{-1}\left(\frac{a-b}{2\sqrt{ab}}\right)$
 b. $\tan^{-1}\left(\frac{a+b}{2\sqrt{ab}}\right)$
 c. $\tan^{-1}\left(\frac{2ab}{\sqrt{a-b}}\right)$
 d. $\tan^{-1}\left(\frac{2ab}{\sqrt{a+b}}\right)$
133. The chords of contact of a point p with respect to a hyperbola and its auxiliary circle are at right angle. Then, the point P lies on
 a. conjugate hyperbola
 b. one of the directrix
 c. one of the asymptotes
 d. None of these
134. Through a point A on the X-axis, a straight line is drawn parallel to the Y-axis, so as to meet the pair of straight lines $ax^2 + 2hxy + by^2 = 0$ at B and C . If $AB = BC$, then
 a. $h^2 = 4ab$
 b. $8h^2 = 9ab$
 c. $9h^2 = 8ab$
 d. $4h^2 = ab$
135. If a and b are positive quantities such that $a > b$, then the minimum value of $a \sec \theta - b \tan \theta$ is
 a. $2ab$
 b. $\sqrt{a^2 - b^2}$
 c. $a - b$
 d. $\sqrt{a^2 + b^2}$

- 136.** Let $x = \sin 1^\circ$, then the value of expression
 $\frac{1}{\cos 0^\circ \cdot \cos 1^\circ} + \frac{1}{\cos 1^\circ \cdot \cos 2^\circ} + \frac{1}{\cos 2^\circ \cdot \cos 3^\circ}$
 $+ \dots + \frac{1}{\cos 44^\circ \cdot \cos 45^\circ}$ is equal to
 a. x b. $1/x$
 c. $\sqrt{2}/x$ d. $x/\sqrt{2}$

137. If $\tan x = n \tan y, n \in R^+$, then the maximum value of $\sec^2(x - y)$ is equal to
 a. $\frac{(n+1)^2}{2n}$ b. $\frac{(n+1)^2}{n}$
 c. $\frac{(n+1)^2}{2}$ d. $\frac{(n+1)^2}{4n}$

138. $\frac{\sin^3 \theta - \cos^3 \theta}{\sin \theta - \cos \theta} - \frac{\cos \theta}{\sqrt{1 + \cot^2 \theta}} - 2 \tan \theta \cot \theta = -1$, if
 a. $\theta \in \left(0, \frac{\pi}{2}\right)$ b. $\theta \in \left(\frac{\pi}{2}, \pi\right)$
 c. $\theta \in \left(\pi, \frac{3\pi}{2}\right)$ d. $\theta \in \left(\frac{3\pi}{2}, 2\pi\right)$

139. If $\sin^{-1} x + \sin^{-1} y + \sin^{-1} z = \pi$, then
 $x^4 + y^4 + z^4 + 4x^2y^2z^2 = k (x^2y^2 + y^2z^2 + z^2x^2)$,
 where k is equal to
 a. 1 b. 2 c. 3 d. 4

140. Two medians drawn from the acute angles of a right angled triangle intersect at an angle $\pi/6$. If the length of the hypotenuse of the triangle is 3 units, then the area of triangle (in sq units) is
 a. $\sqrt{3}$ b. 3 c. $\sqrt{2}$ d. 9

141. The minimum value of the sum of real numbers $a^{-5}, a^{-4}, 3a^{-3}, 1, a^8$ and a^{10} with $a > 0$, is
 a. 7 b. 8 c. 6 d. 10

142. A man walks a distance of 3 units from the origin towards the North-East ($N 45^\circ E$) direction. From there, he walks a distance of 4 units towards the North-West ($N 45^\circ W$) direction to reach a point P . Then, the position of P in the argand plane is
 a. $3e^{i\pi/4} + 4i$ b. $(3 - 4i)e^{i\pi/4}$
 c. $(4 + 3i)e^{i\pi/4}$ d. $(3 + 4i)e^{i\pi/4}$

143. If S is the set of all real x such that $\frac{2x-1}{2x^3+3x^2+x}$ is positive, then S contains
 a. $(-\infty, +3/2)$ b. $(-3/2, -1/4)$
 c. $(-1/4, 1/2)$ d. $(1/2, 3)$

144. For any three sets A, B and C , the set $(A \cup B \cup C) \cap (A \cap B' \cap C') \cap C'$ is equal to
 a. $B \cap C'$ b. $B' \cap C'$
 c. $B \cap C$ d. $A \cap B \cap C$

145. Let w denotes words in the English dictionary. Define the relation R by $R = \{(x, y) \in w \times w : \text{the words } x \text{ and } y \text{ have atleast one letter in common}\}$ then, R is
 a. not reflexive, symmetric and transitive
 b. not transitive, reflexive and symmetric
 c. not symmetric, reflexive and transitive
 d. reflexive, transitive and symmetric

146. Let $f : [2, \infty) \rightarrow x$ be defined by $f(x) = 4x - x^2$, then f is invertible, if x is equal to
 a. $[2, \infty)$ b. $(-\infty, 2]$
 c. $(-\infty, 4]$ d. $[4, \infty)$

147. Which of the following is always true?
 a. $(p \rightarrow q) \equiv (\sim q \rightarrow \sim p)$ b. $\sim(p \vee q) \equiv (\sim p \vee \sim q)$
 c. $\sim(p \rightarrow q) \equiv (p \vee \sim q)$ d. $\sim(p \wedge q) \equiv (\sim p \wedge \sim q)$

148. If $49^n + 16n + \lambda$ is divisible by 64 for all $n \in N$, then the least negative integral value of λ is
 a. -2 b. -1
 c. -3 d. -4

149. Between any two real roots of the equation $e^x \sin x - 1 = 0$, the equation $e^x \cos x + 1 = 0$ has
 a. atleast one root
 b. no root
 c. atmost one root
 d. exactly one root

150. If the mean and variance of a binomial variable x are 2 and 1 respectively, then the probability that x takes a value greater than or equal to 1 is
 a. $\frac{2}{3}$ b. $\frac{4}{5}$
 c. $\frac{7}{8}$ d. $\frac{15}{16}$

Instructions

- There are 150 questions in all. The number of questions in each part is as follows Subject
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

Part I Physics	1-40
Part II Chemistry	41-80
Part III (a) English Proficiency	81-95
(b) Logical Reasoning	96-105
Part IV Mathematics	106-150

PART I

Physics

- The velocity of water waves may depend on their wavelength λ , the density of water ρ and the acceleration due to gravity g . The method of dimensional analysis gives the relation between these quantities as
 - $v^2 = k\lambda^{-1}g^{-1}\rho^{-1}$
 - $v^2 = k\lambda g$
 - $v^2 = k\lambda\rho g$
 - $v^2 = k\lambda^3g^{-1}\rho^{-1}$
- A particle located at $x = 0$ and $t = 0$ starts moving along the positive x -direction with a velocity v that varies as $v = \alpha\sqrt{x}$, the displacement of the particle varies with time as
 - $x \propto \sqrt{t}$
 - $x \propto t$
 - $x \propto t^2$
 - $x \propto \frac{1}{t^2}$
- From an elevated point P , a stone is projected vertically upwards. When the stone reaches a distance h below P , its velocity is double of its velocity at a height h above P . The greatest height attained by the stone from the point of projection P is
 - $\frac{3}{5}h$
 - $\frac{5}{3}h$
 - $\frac{7}{5}h$
 - $\frac{5}{7}h$
- A train accelerates from rest at a constant rate α for distance x_1 and time t_1 . After that it retards to rest at constant rate β for distance x_2 and time t_2 . Then, it is found that
 - $\frac{x_1}{x_2} = \frac{d}{\beta} = \frac{t_1}{t_2}$
 - $\frac{x_1}{x_2} = \frac{\beta}{\alpha} = \frac{t_1}{t_2}$
 - $\frac{x_1}{x_2} = \frac{\beta}{\alpha} = \frac{t_2}{t_1}$
 - $\frac{x_1}{x_2} = \frac{\beta}{\alpha} = \frac{t_2}{t_1}$
- An ant crawls up a hemispherical surface very slowly as shown in figure. The coefficient of friction between the ant and the surface is $1/3$. If the line joining the centre of hemispherical surface to ant makes an angle α with the vertical, the maximum possible value of α is

- $\sec^{-1}(3)$
 - $\cot^{-1}(3)$
 - $\tan^{-1}(3)$
 - $\operatorname{cosec}^{-1}(3)$

6. A block of weight 5 N is pushed against a vertical wall by a force 12 N. The coefficient of friction between the wall and block is 0.6. The magnitude of the force exerted by wall on the block is

- a. 12 N b. 5 N c. 7.2 N d. 13 N

7. A vertical spring with force constant k is fixed on a table. A ball of mass m at a height h above the free upper end of spring falls vertically on the springs, so that the spring is compressed by a distance d . The net work done in this process is

- a. $mg(h+d) + \frac{1}{2}kd^2$ b. $mg(h+d) - \frac{1}{2}kd^2$
c. $mg(h-d) - \frac{1}{2}kd^2$ d. $mg(h-d) + \frac{1}{2}kd^2$

8. A thin uniform rod of length l and mass m is swinging freely about a horizontal axis passing through its end. Its maximum angular velocity is ω . Its centre of mass rises to a maximum height of

- a. $\frac{l^2\omega^2}{6g}$ b. $\frac{l^2\omega^2}{3g}$ c. $\frac{l^2\omega^2}{2g}$ d. $\frac{l\omega}{6g}$

9. Two long metallic strips are joined together by two rivets each of radius 0.1 cm (see figure). Each rivet can withstand a maximum shearing stress of $4 \times 10^8 \text{ Nm}^{-2}$. The maximum tangential force which a strip can exert is

- a. 185 N b. 1885 N c. 855 N d. 1555 N

10. Two rods P and Q of same length and same diameter having thermal conductivity ratio 2:3 joined end to end. If temperature at one end of P is 100°C and at one end of Q is 0°C , then temperature of interface is

- a. 60°C b. 70°C
c. 50°C d. 40°C

11. A square wire frame of size L is dipped in a liquid. On taking out, a membrane is formed. If the surface tension of liquid is T , force acting on the frame will be
- a. $2TL$ b. $4TL$ c. $8TL$ d. $10TL$

12. Assume that a drop of liquid evaporates by decrease in its surface energy, so that its temperature remains unchanged. What should be the minimum radius of the drop for this to be possible? The surface tension is T , density of liquid is ρ and L is its latent heat of vaporisation.

- a. $\sqrt{T/\rho L}$ b. $T/\rho L$ c. $2T/\rho L$ d. $\rho L/T$

13. A liquid is kept in a cylindrical vessel which is rotated along its axis. The liquid rises at the sides (figure). If the radius of the vessel is 0.05 m and the speed of rotation is 2 rad/s, then find the difference in the height of liquid at centre and sides.

- a. 20 cm b. 4 cm c. 2 cm d. 0.2 cm

14. An ideal gas is expanding such that $pT^2 = \text{constant}$. The coefficient of volume expansion of the gas is

- a. $\frac{1}{T}$ b. $\frac{2}{T}$ c. $\frac{3}{T}$ d. $\frac{4}{T}$

15. The ratio of the speed of sound in nitrogen gas to that in helium gas at 300 K is

- a. $\sqrt{\frac{1}{7}}$ b. $\sqrt{\frac{2}{7}}$ c. $\frac{\sqrt{3}}{5}$ d. $\frac{\sqrt{6}}{5}$

16. A point mass oscillates along X -axis according to the law $x = x_0 \cos\left(\omega t - \frac{\pi}{4}\right)$. If the acceleration of the

particle is written as $a = A \cos(\omega t + \delta)$, then

- a. $A = x_0\omega^2$, $\delta = \pi/4$ b. $A = x_0\omega^2$, $\delta = -\pi/4$
c. $A = x_0\omega^2$, $\delta = 3\pi/4$ d. $A = x_0$, $\delta = \pi/4$

17. The fundamental frequency of a closed end pipe is 480 Hz. What is the fundamental frequency when $\left(\frac{1}{4}\right)^{\text{th}}$ length is filled with water?

- a. 120 Hz b. 240 Hz c. 640 Hz d. 960 Hz

18. The electric flux for Gaussian surface A that enclose the charged particles in free space is

(given, $q_1 = -14 \text{ nC}$, $q_2 = 78.85 \text{ nC}$, $q_3 = -56 \text{ nC}$)

- a. $10^3 \text{ CN}^{-1}\text{m}^{-2}$ b. $10^3 \text{ Nm}^2 \text{ C}^{-1}$
c. $6.32 \times 10^3 \text{ Nm}^2 \text{ C}^{-1}$ d. $6.32 \times 10^3 \text{ CN}^{-1}\text{m}^{-2}$

19. A sphere of 4 cm radius is suspended with in a hollow sphere of 6 cm radius. The inner sphere is charged to a potential of 3 esu. When the outer sphere is earthed, then the charge on the inner sphere is

- a. 54 esu b. 0.25 esu c. 30 esu d. 36 esu
20. Six identical capacitors are joined in parallel, charged to a potential difference of 10 V, separated and then connected in series, i.e. the positive plate of one is connected to negative plate of other. Then, potential difference between free plates is
- a. 10 V b. 30 V c. 60 V d. $\frac{10}{5}$ V
21. Kirchhoff's first law ($\Sigma i = 0$) and second law ($\Sigma iR = \Sigma E$), where symbols have their usual meanings, are respectively on
- a. conservation of charge, conservation of energy
b. conservation of charge, conservation of momentum
c. conservation of energy, conservation of charge
d. conservation of momentum, conservation of energy
22. In the given figure, find the resistance between A and B. Both the circle and the diameter are made of uniform wire of resistance $1 \times 10^{-4} \Omega/\text{m}$. The length AB is 2 m.

- a. $\frac{2}{3} \times 10^{-4} \Omega$
b. $2\pi \times 10^{-4} \Omega$
c. $14.56 \times 10^{-4} \Omega$
d. $0.88 \times 10^{-4} \Omega$
23. The resistance of series combination of 2 resistors is S. When they are joined in parallel, the total resistance is P. If $S = nP$, then minimum possible value of n is
- a. 4 b. 3
c. 2 d. 1
24. Find R, if power dissipated in the circuit is 150 W.

- a. 2 Ω b. 6 Ω
c. 7 Ω d. 5 Ω

25. The oscillating frequency of a cyclotron is 10 MHz. If the radius of its dees is 0.5 m, the kinetic energy of a proton, which is accelerated by the cyclotron is
- a. 10.2 MeV b. 2.55 MeV
c. 20.4 MeV d. 5.1 MeV
26. Two particles A and B of masses m_A and m_B respectively and having the same charge are moving in a plane. A uniform magnetic field exists perpendicular to this plane. The speeds of particles are v_A and v_B respectively and the trajectories are as shown in figure, then

- a. $m_A v_A < m_B v_B$
b. $m_A v_A > m_B v_B$
c. $m_A < m_B$ and $v_A < v_B$
d. $m_A = m_B$ and $v_A = v_B$
27. A magnetic needle suspended by a silk thread is vibrating in the earth's magnetic field. If the temperature of the needle is increased by 500°C , then
- a. the time period decreases
b. the time period remains unchanged
c. the time period increases
d. the needle stops vibrating
28. A circular disc of radius 0.2 m is placed in a uniform magnetic field of induction $\left(\frac{1}{\pi}\right) \text{ Wb/m}^2$ in such a way that its axis makes an angle of 60° with $\mathbf{B}$. The magnetic flux linked with the disc is
- a. 0.01 Wb b. 0.02 Wb
c. 0.06 Wb d. 0.08 Wb
29. A wire of length 50 cm moves with velocity of 300 m/min perpendicular to a magnetic field. If the emf induced in the wire is 2V, magnitude of field in tesla is
- a. 2 b. 5
c. 0.4 d. 0.8
30. In an LCR series AC circuit, the voltage across each of the components L, C and R is 50 V. The voltage across LC combination will be
- a. 50 V b. $50\sqrt{2}$ V c. 100 V d. 0 V
31. The refractive index of air is 1.0003. The thickness of air column which has one more wavelength of yellow light ($\lambda = 600 \text{ nm}$), then the same thickness of vacuum is
- a. 0.02 mm b. 0.2 mm
c. 2 mm d. 2 cm

32. In an interference experiment, third bright fringe is obtained at a point on the screen with a light of 700 nm. What should be the wavelength of the light source in order to obtain 5th bright fringe at the same point ?
a. 420 nm b. 750 nm c. 630 nm d. 500 nm
33. Two coherent light beams of intensity I and $4I$ are superposed. The maximum and minimum possible intensities in the resulting beam are
a. $5I$ and $3I$ b. $9I$ and I c. $9I$ and $3I$ d. $5I$ and I
34. Two convex lenses of focal lengths 0.3 m and 0.05 m are used to make a telescope. Distance kept between the two in order to obtain image at infinity is
a. 0.25 m b. 0.3 m c. 0.35 m d. 0.20 m
35. The number of photons of wavelength 660 nm emitted per second by an electric bulb of 60 W is
(Take, 6.6×10^{-34} Js)
a. 2×10^{20} b. 2×10^{-20}
c. 3×10^{20} d. 1.5×10^{20}
36. When ${}_{88}\text{Ra}^{236}$ decays in a series by emission of 3 α -particles and one β -particle, isotope X formed as
a. ${}_{83}\text{X}^{224}$ b. ${}_{84}\text{X}^{218}$ c. ${}_{84}\text{X}^{220}$ d. ${}_{82}\text{X}^{223}$
37. The radioactivity of a sample is A_1 at time t_1 and A_2 at time t_2 . If the mean life of the specimen is T , then the number of atoms that have disintegrated in the time interval of $(t_2 - t_1)$ is
a. $(A_1 - A_2)$ b. $\frac{(A_1 - A_2)}{T}$
c. $(A_1 - A_2)T$ d. $(A_1 t_1 - A_2 t_2)$
38. The radioactive isotope X with a half-life of 10^9 year decays to Y which is stable. A sample of rocks was found to contain both the elements X and Y in the ratio 1 : 7. What is the age of the rocks ?
a. 2×10^9 yr b. 3×10^9 yr
c. 6×10^9 yr d. 7×10^9 yr
39. A common emitter amplifier has a voltage gain of 50, an input impedance of 100Ω and an output impedance of 200Ω . The power gain of the amplifier is
a. 500 b. 1000
c. 1250 d. 100
40. A 600 W carrier is modulated to a depth of 75% by a 400 Hz sine wave. Find the total power of antenna.
a. 769 W b. 796 W c. 679 W d. 637.5 W

PART II

Chemistry

41. Choose the correct statement from the following reaction.

- a. B is obtained by elimination reaction
b. B is an isomer of ethyl methyl ether, while C is the dehydrated compound of B
c. C is obtained by substitution reaction
d. The molecular formula of B is C_3H_6 and that of C is $\text{C}_3\text{H}_8\text{O}$
42. An inorganic halide P reacts with water to form two acids Q and R , P also reacts with NaOH to form two salts S and T which remain in solution. The solution gives white precipitate with both AgNO_3 and BaCl_2 solutions respectively. P is a useful reagent. What is P in the reaction?
a. AgCl b. NaCl c. SO_2Cl_2 d. HCl
43. The vapour density of completely dissociated NH_4Cl would be
a. half of that of ammonium chloride
b. double that of ammonium chloride
c. slightly less than half of that of ammonium chloride
d. determined by the amount of solid ammonium chloride used
44. A binary solid (A^+B^-) has a zinc blende structure with B^- ions constituting the lattice and A^+ ions occupying 25% tetrahedral holes, then the formula of solid is
a. AB b. A_2B c. AB_2 d. AB_4
45. Which of the following reactions will not give propane?
a. $\text{H}_3\text{C}-\text{CH}=\text{CH}_2 \xrightarrow[\text{CH}_3\text{COOH}]{\text{B}_2\text{H}_6, \text{ ether}}$
b. $\text{H}_3\text{C}-\text{CH}(\text{Cl})-\text{CH}_3 \xrightarrow{\text{P+HI}}$
c. $\text{H}_3\text{C}-\text{C}(=\text{O})-\text{CH}_3 \xrightarrow[\text{H}_2\text{O}]{\text{CH}_3\text{MgX}}$
d. $\text{H}_3\text{C}-\text{CH}_2-\text{CH}_2-\text{Cl} \xrightarrow[\text{H}_2\text{O}]{\text{Mg, ether}}$
46. The molecular formula of certain compound has X_4O_6 . If 10 g of X_4O_6 has 5.72 g X, then the atomic mass of X is
a. 42 b. 30
c. 24 d. 32
47. 3.15 g oxalic acid $[(\text{COOH})_2 \cdot x\text{H}_2\text{O}]$ was dissolved to make 500 mL solution. On titration, 33.36 mL of this solution were neutralised by 50 mL $N/15$ NaOH. The value of x will be
a. 3 b. 2
c. 1 d. 4

48. Which of the following represent the given mode of hybridisation $sp-sp-sp^2-sp^2$ from right to
- $H_2C=CH-C\equiv CH$
 - $H_2C=C=C=CH_2$
 - 
 - $HC\equiv C-CH_2-C\equiv CH$
49. Which of the following statements is incorrect?
- The degree of dissociation of a weak electrolyte decreases as its concentration decreases
 - The freezing point of water is depressed by the addition of glucose
 - If two liquids that form an ideal solution, are mixed, the change in entropy is positive
 - Energy is released when a substance dissolves in water provided that the hydration energy of the substance is more than its lattice energy
50. The hardness of water sample which contains 0.001 mole of $MgSO_4$ dissolved per litre of water, is
- 150 ppm
 - 100 ppm
 - 120 ppm
 - 180 ppm
51. Density of a gas is found to be 5.46 g/dm^3 at 27°C and 2 bar pressure. At STP, its density will be
- 3 g/cm^3
 - 0.3 g/dm^3
 - 3 g/dm^3
 - 4 g/dm^3
52. On the basis of intermolecular forces, predict the correct decreasing order of boiling points of the compounds.
- $CH_3OH > H_2 > CH_4$
 - $CH_3OH > CH_4 > H_2$
 - $CH_4 > CH_3OH > H_2$
 - $H_2 > CH_4 > CH_3OH$
53. Which of the following options does not have isoelectronic species?
- CN^- , N_2 , C_2^{2-}
 - SO_3^{2-} , CO_3^{2-} , NO_3^-
 - BO_3^{3-} , CO_3^{2-} , NO_3^-
 - PO_4^{3-} , SO_4^{2-} , ClO_4^-
54. Actinoids exhibit more number of oxidation states than lanthanoids. The main reason for this is
- more active nature of the actinoids
 - more energy difference between $5f$ and $6d$ -orbitals than between $4f$ and $5d$ -orbitals
 - lesser energy difference between $5f$ and $6d$ -orbitals than that between $4f$ and $5d$ -orbitals
 - greater metallic character of the lanthanoids than that of the corresponding actinoids
55. Among the elements Li, K, Ca, S and Kr, which one is expected to have the lowest first ionisation enthalpy and which have the highest first ionisation enthalpy? The increasing order of first ionisation enthalpy of the elements Li, K, Ca, S and Kr, is
- $Li < K < Ca < S < Kr$
 - $K < Li < Ca < S < Kr$
 - $Kr < Ca < S < Li < K$
 - $Ca < Li < S < K < Kr$
56. Toluene is nitrated and the resulting product is reduced with tin and HCl. The product so obtained is diazotised and then heated with cuprous bromide. The final product is
- mixture of *o*- and *p*-dibromobenzene
 - mixture of *o*- and *p*-bromotoluene
 - mixture of *o*- and *p*-bromoaniline
 - mixture of *o*- and *m*-bromotoluene
57. In which of the following compounds, the size of cation and anion ratio is minimum?
- LiI
 - LiF
 - CsF
 - CsI
58. Which of the following is not an antipyretic drug?
- Paracetamol
 - Aspirin
 - Phenacetin
 - Marijuanae
59. Which of the following represent the heat of formation of $CO_2(g)$?
- $CO(g) + \frac{1}{2}O_2(g) \longrightarrow CO_2(g)$
 - $C_6H_6(l) + 7\frac{1}{2}O_2(g) \longrightarrow 6CO_2(g) + 3H_2O(l)$
 - $C(\text{graphite}) + O_2(g) \longrightarrow CO_2(g)$
 - $CH_4(g) + 2O_2(g) \longrightarrow CO_2(g) + 2H_2O(l)$
60. Which of the following factors is of no significance for roasting sulphide ores to the oxides and not subjecting the sulphide ores to carbon reduction directly?
- Metal sulphides are thermodynamically more stable than CS_2
 - Metal sulphides are less stable than the corresponding oxides
 - CO_2 is more volatile than CS_2
 - CO_2 is thermodynamically more stable than CS_2
61. The reaction of acetaldehyde with excess of ethanol in the presence of H_2SO_4 gives the product
- $CH_3CH(OC_2H_5)_2$
 - $CH_3CH(OH)_2$
 - Ketal
 - $C_2H_5OCH_2CH_2OC_2H_5$
62. When mercuric iodide is added to the aqueous solution of KI, the
- freezing point is raised
 - freezing point does not change
 - freezing point is lowered
 - boiling point does not change
63. $KMnO_4$ oxidises NO_2^- to NO_3^- in basic medium, the number of moles of NO_2^- oxidised by 1 mole of $KMnO_4$ is
- $\frac{3}{2}$
 - 2
 - $\frac{4}{3}$
 - None of these

- I. 2-butene II. 2-methyl-2-butene
III. 2,3-dimethyl-2-butene IV. ethene
- a. III > I > II > IV b. IV > I > II > III
c. IV > II > I > III d. I > III > IV > II

- a. 33.6 JK^{-1} b. -33.6 JK^{-1}
c. 41.2 JK^{-1} d. -41.2 JK^{-1}

- a. copper
b. copper nitride
c. copper nitrite
d. copper oxide

- a. 250 min b. 200 min c. 180 min d. 300 min

- 
- (I) CH_2^+ CH
 (II) CH_2^+ NO_2
 (III) CH_2^+ CH_3
 (IV) CH_2^+ NH_2

- a. $IV > I > III > II$
b. $II > III > I > IV$
c. $IV > III > I > II$
d. $III > IV > I > II$

- a. Kolbe's reaction
b. Wurtz reaction
c. Sandmeyer's reaction
d. Williamson's synthesis

- adsorption of Ca^{2+} and Mg^{2+} ions of hard water replacing Al^{3+} ions
- adsorption of Ca^{2+} and Mg^{2+} ions of hard water replacing Na^{+} ions
- Both (a) and (b) are true
- None of the above is true

- a. 2 b. 3 c. 6 d. 4

- a. -0.732 V b. 0.059 V
c. -0.177 V d. -0.059 V

- a. $\text{Fe}_2[\text{Fe}(\text{CN})_6]$ b. $\text{Na}_4[\text{Fe}(\text{CN})_6]$
c. $\text{Fe}_4[\text{Fe}(\text{CN})_6]_3$ d. $\text{Fe}_3[\text{Fe}(\text{CN})_6]_4$

- a. Na_2ZnO_2 b. $\text{Zn}(\text{OH})_2$
c. ZnO d. None

- a. Allyl amine
b. Propan-2-amine
c. N,N-diethyl butan-1-amine
d. N-methyl ethanamine

- a. square planar
b. tetrahedral
c. trigonal
d. trigonal bipyramidal

- a. 0.321 b. 0.437
c. 0.812 d. 0.617

- Sn-Cassiterite-Gravity separation
- Fe-Haematite-Magnetic separation
- Al-Bauxite-Leaching
- Ag-Cinnabar-Thermal decomposition

- a. $\text{NO}_2^- + \text{CH}_3\text{COOH} \longrightarrow \text{CH}_3\text{COO}^- + \text{HNO}_2$
(in aqueous medium)

- b.** $\text{HCl} + \text{CH}_3\text{COOH} \longrightarrow \text{CH}_3\text{COOH}_2^+ + \text{Cl}^-$
(in non-aqueous medium)

- c. $\text{HNO}_2 + \text{CH}_3\text{COO}^- \longrightarrow \text{CH}_3\text{COOH} + \text{NO}_2^-$
(in aqueous medium)

- d. $\text{HF} + \text{HCl} \longrightarrow \text{H}_2\text{Cl}^+ + \text{F}^-$ (in non-aqueous medium)

- $\text{Ni}(\text{PPh}_3)_2 \text{Cl}_2$ has tetrahedral geometry with magnetic moment 2.82 M
- $[\text{FeCl}_6]^{4-}$ is an inner orbital complex with zero magnetic moment

- c. The magnetic moment of $[\text{Fe}(\text{CN})_6]^{4-}$ is zero
- d. Wavelength of absorption in the visible region for $[\text{Ni}(\text{H}_2\text{O})_6]^{2+}$

Part III

a. English Proficiency

Directions (Q. Nos. 81 to 84) *Spot the error in the following sentences and indicate your answer.*

81. It is a pity (a)/ that even five years old boys (b)/ are engaged in hazardous factories. (c)/ No error (d)
82. I gave him(a)/ two hundred rupees notes (b)/ for depositing. (c)/ No error (d)
83. It is not my business (a)/ to give an advice to those (b)/ who are not sensible enough to deal with their own problems. (c)/ No error (d)
84. I don't think(a)/ it is your house, (b)/ it is someboy's else. (c)/ No error (d)

Directions (Q. Nos. 85 to 88) *Rearrange the jumbled parts of the sentence and then indicate the correct option.*

85. P : it is a pity that
Q : by offering a handsome dowry
R : a number of parents think that
S : they will able to ensure the happiness of their daughters.
The proper sequence should be
a. SQRP b. PRSQ c. PSRQ d. PRQS
86. The common man
P : in nuturing
Q : a more active role
R : communal harmony
S : should play
The proper sequence should be
a. PRSQ b. SQPR c. SQRP d. PRQS
87. The doctor
P : able to find out
Q : what had caused
R : the food poisoning
S : had not been
The proper sequence should be
a. SPRQ b. PRQS c. PRSQ d. SPQR

88. P : was suspended
Q : the officer being corrupt
R : before his dismissal
S : from service
The proper sequence should be
a. QPSR b. QPRS
c. RSQP d. RSQP

Directions (Q. Nos. 89 to 92) *Find the synonym of the word written in capital letters in the given sentences.*

89. EXAGGERATION of facts would always lead to confusion
a. Simplification b. Negation
c. Emancipation d. Amplification
90. After his father's death, he became INSOLVENT.
a. Rich b. Poor
c. Bankrupt d. Nonchalant
91. He INDUCES human beings to want things they don't want.
a. Influences b. Dictates
c. Persuades d. Appreciates
92. His information is not AUTHENTIC.
a. Real b. Reliable c. Believable d. Genuine

Directions (Q. Nos. 93 to 95) *Find the antonym of the word written in the capital letters.*

93. He finally CONCEDED that he was involved in smuggling
a. Admitted b. Accepted c. Denied d. Concealed
94. The accused emphatically DENIED the charge in the court.
a. Accepted b. Agreed
c. Asserted d. Affirmed
95. The cloth is COARSE of touch.
a. Delicate b. Rough c. Painful d. Harsh

b. Logical Reasoning

96. 'Doctor' is related to 'Patient', in the same way 'Lawyer' is related to
a. Customer
b. Criminal
c. Magistrate
d. Client
97. Find the odd one out.
a. 8-11 b. 1-4 c. 7-10 d. 3-5

98. Which figure will best represent the relationship amongst the three classes doctor, teacher, women ?

99. Find the missing number.

- a. 26
c. 32

- b. 36
d. 117

100. Find the odd one out.

- a. b. c. d.

101. Count the number of squares in the following figure.

- a. 4 b. 5 c. 6 d. 7

102. In the question below, figure (X) is embedded in one of the following. Then, find out the correct alternative.

(X)

- a. b. c. d.

103. If LOFTY is coded as LPFUY, then DWARF will be written as

- a. DXASF b. DXBSG c. DXATF d. DWBSG

104. If the day before yesterday was Thursday, when will Sunday be ?

- a. Today b. Two days after today
c. Tomorrow d. Day after Tomorrow

105. Find the next term in the series 5, 16, 51, 158.

- a. 1452 b. 483 c. 481 d. 1454

PART IV

Mathematics

106. If the median of 25 observations is 45 and if the observations greater than the median are increased by 4, then the median of the new data is

- a. 49 b. 41 c. 45 d. 40

107. The differential equation of rectangular hyperbolas whose axes are asymptotes of the hyperbola $x^2 - y^2 = a^2$, is

- a. $y \frac{dy}{dx} = x$ b. $x \frac{dy}{dx} = -y$
c. $x \frac{dy}{dx} = y$ d. $x dy + y dx = C$

108. If $f(x) = \max \left\{ \sin x, \cos x, \frac{1}{2} \right\}$, then the area of the region bounded by the curves $y = f(x)$, X-axis, Y-axis and $x = \frac{5\pi}{3}$, is

- a. $\sqrt{2} - \sqrt{3} + \frac{5\pi}{12}$ b. $\sqrt{2} + \frac{\sqrt{3}}{2} + \frac{5\pi}{12}$
c. $\sqrt{2} + \sqrt{3} + \frac{5\pi}{12}$ d. None of these

109. The value of $\int_0^{[x]} \frac{2^x}{2^{[x]}} dx$ is

- a. $[x] \log 2$ b. $\frac{[x]}{\log 2}$
c. $\frac{1}{2} \cdot \frac{[x]}{\log 2}$ d. None of these

110. If $\int \frac{1}{x+x^5} dx = f(x) + C$, then the value of $\int \frac{x^4}{x+x^5} dx$ is

- a. $\log x - f(x) + C$ b. $f(x) + \log x + C$
c. $f(x) - \log x + C$ d. None of these

111. If $f(x) = a \log|x| + bx^2 + x$ has its extremum values at $x = -1$ and $x = 2$, then

- a. $a = 2, b = -1$
b. $a = 2, b = -1/2$
c. $a = -2, b = 1/2$
d. None of the above

112. Let $f(x) = \tan^{-1}\{g(x)\}$, where $g(x)$ is monotonically increasing for $0 < x < \frac{\pi}{2}$. Then, $f(x)$ is

- a. increasing on $(0, \pi/2)$
b. decreasing on $(0, \pi/2)$
c. increasing on $(0, \pi/4)$ and decreasing on $\left(\frac{\pi}{4}, \frac{\pi}{2}\right)$
d. None of these

113. The equation $\sin x + x \cos x = 0$ has atleast one root in the interval

- a. $(-\pi/2, 0)$
b. $(0, \pi)$
c. $(-\pi/2, \pi/2)$

- d. None of the above
114. If the tangent at $(1, 1)$ on $y^2 = x(2-x)^2$ meets the curve again at P , then P is
 a. $(4, 4)$ b. $(-1, 2)$
 c. $(9/4, 3/8)$ d. None of these
115. If $y = |x - x^2|$, then $\frac{dy}{dx}$ at $x = 1$ is
 a. -1
 b. 1
 c. Does not exist
 d. None of the above
116. If $f(x) = |x - 2|$ and $g(x) = f\{f(x)\}$, then $g'(x)$ for $x > 20$ is
 a. 1 b. 2
 c. -1 d. None these
117. If α and β are the roots of the equation $ax^2 + bx + c = 0$ then $\lim_{x \rightarrow \alpha} (1 + ax^2 + bx + c)^{1/x-\alpha}$ is
 a. $e^{a(\alpha-\beta)}$ b. $e^{\alpha(\beta-\alpha)}$
 c. 1 d. None of these
118. If $f(x) = ax^2 + bx + c$ satisfies the identity $f(x+1) - f(x) = 8x + 3$ for all $x \in \mathbb{R}$. Then, (a, b) equals
 a. $(2, 1)$ b. $(4, -1)$
 c. $(-1, 4)$ d. $(-1, 1)$
119. The number of times a die must be tossed to obtain a 6 atleast once with probability exceeding 0.9 is atleast
 a. 13 b. 19
 c. 25 d. None of these
120. For all $n \in \mathbb{N}$, $3^{3n} - 26^n - 1$ is divisible by
 a. 24 b. 64
 c. 17 d. 676
121. If $x = 5$ and $y = -2$, then $x - 2y = 9$. The contrapositive of this proposition is
 a. if $x - 2y \neq 9$, then $x \neq 5$ or $y \neq -2$
 b. if $x - 2y = 9$, then $x \neq 5$ and $y \neq -2$
 c. $x - 2y = 9$ if and only if $x = 5$ and $y = -2$
 d. None of the above
122. The inverse of the function $f: \mathbb{R} \rightarrow \mathbb{R}$ given by $f(x) = \log_a(x + \sqrt{x^2 + 1})$; ($a > 0, a \neq 1$), is
 a. $\frac{1}{2}(a^x + a^{-x})$ b. $\frac{1}{2}(a^x - a^{-x})$
 c. $\frac{1}{2}\left(\frac{a^x + a^{-x}}{a^x - a^{-x}}\right)$ d. Not defined
123. The relation R defined on the set $A = \{1, 2, 3, 4, 5\}$ by $R = \{(a, b) : |a^2 - b^2| < 16\}$ is given by
 a. $\{(1, 1), (2, 1), (3, 1), (4, 1), (2, 3)\}$
 b. $\{(2, 2), (3, 2), (4, 2), (2, 4)\}$
 c. $\{(3, 3), (4, 3), (5, 4), (3, 4)\}$
 d. None of the above
124. If $A = \left\{ p : p = \frac{(x+2)(2x^5 + 3x^4 + 4x^3 + 5x^2 + 6)}{x^2 + 2x}; x, p \in \mathbb{Z}^+ \right\}$, then the number of elements in the set A , is
 a. 2 b. 3 c. 4 d. 6
125. If $(21.4)^a = (0.00214)^b = 100$, then the value of $\frac{1}{a} - \frac{1}{b}$ is
 a. 0 b. 1 c. 2 d. 4
126. If $\sin \theta + \cos \theta = \frac{1}{5}$ and $0 \leq \theta < \pi$, then $\tan \theta$ equals
 a. $-\frac{4}{3}$ b. $-\frac{3}{4}$ c. $\frac{3}{4}$ d. $\frac{4}{3}$
127. If a, b, c are the sides of $\triangle ABC$, right angled at C , then the minimum value of $\left(\frac{c}{a} + \frac{c}{b}\right)^2$ is
 a. 0 b. 4 c. 6 d. 8
128. The equation $\sin^4 x - 2\cos^2 x + a^2 = 0$ can be solved, if
 a. $-\sqrt{3} \leq a \leq \sqrt{3}$ b. $-\sqrt{2} \leq a \leq \sqrt{2}$
 c. $-1 \leq a \leq 1$ d. None of these
129. Complete solution set of $[\cot^{-1} x] + 2[\tan^{-1} x] = 0$, where $[\]$ denotes the greatest integer function, is equal to
 a. $(0, \cot 1)$ b. $(0, \tan 1)$ c. $(\tan 1, \infty)$ d. $(\cot 1, \tan 1)$
130. In $\triangle ABC$, base BC and area of triangle are fixed. The locus of the centroid of $\triangle ABC$ is a straight line that is
 a. parallel to side BC
 b. right bisector of side BC
 c. right angle of BC
 d. inclined at an angle $\sin^{-1}(\sqrt{\Delta/BC})$ to side BC
131. A triangle is formed by the lines $x + y = 0$, $x - y = 0$ and $lx + my = 1$. If l and m vary subject to the condition $l^2 + m^2 = 1$, then the locus of its circumcentre is
 a. $(x^2 - y^2)^2 = x^2 + y^2$ b. $(x^2 + y^2)^2 = x^2 - y^2$
 c. $x^2 + y^2 = 4x^2y^2$ d. $(x^2 - y^2)^2 = (x^2 + y^2)^2$
132. If the pairs of lines $x^2 + 2xy + ay^2 = 0$ and $ax^2 + 2xy + y^2 = 0$ have exactly one line in common, then the joint equation of the other two lines is given by
 a. $3x^2 + 8xy - 3y^2 = 0$ b. $3x^2 + 10xy + 3y^2 = 0$
 c. $y^2 + 2xy - 3x^2 = 0$ d. $x^2 + 2xy - 3y^2 = 0$
133. If the line $x \cos \theta + y \sin \theta = 2$ is the equation of a transverse common tangent to the circles $x^2 + y^2 = 4$ and $x^2 + y^2 - 6\sqrt{3}x - 6y + 20 = 0$, then the value of θ is
 a. $5\pi/6$ b. $2\pi/3$ c. $\pi/3$ d. $\pi/6$

134. If the parabola $y = ax^2 - 6x + b$ passes through (0, 2) and has its tangent at $x = 3/2$ parallel to X -axis, then
 a. $a = 2, b = -2$ b. $a = 2, b = 2$
 c. $a = -2, b = 2$ d. $a = -2, b = -3$
135. An ellipse is sliding along the coordinate axes. If the foci of the ellipse are (1, 1) and (3, 3), then the area of the director circle of the ellipse (in sq units) is
 a. 2π b. 4π c. 6π d. 8π
136. A normal to the hyperbola $\frac{x^2}{4} - \frac{y^2}{1} = 1$ has equal intercepts on the positive X -axis and Y -axis. If this normal touches the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$, then $a^2 + b^2$ is equal to
 a. 5 b. 25
 c. 16 d. None of these
137. India plays two matches each with West Indies and Australia. In any match, the probabilities of India getting points 0, 1 and 2 are 0.45, 0.05 and 0.50, respectively. Assuming that the outcomes are independent, the probability of India getting atleast 7 points is
 a. 0.8750 b. 0.0875 c. 0.0625 d. 0.0250
138. The number of 3×3 matrices A whose entries are either 0 or 1 and for which the system $A \begin{bmatrix} x \\ y \\ z \end{bmatrix} = \begin{bmatrix} 1 \\ 0 \\ 0 \end{bmatrix}$ has exactly two distinct solutions, is
 a. 0 b. $2^9 - 1$
 c. 168 d. 2
139. A determinant is chosen at random from the set of all determinants of order 2 with elements 0 or 1 only. What is the probability that the value of determinant chosen is positive?
 a. $3/16$ b. $3/6$
 c. $13/16$ d. $5/16$
140. The coefficient of t^{24} in $(1+t^2)^{12}(1+t^{12})(1+t^{24})$ is
 a. ${}^{12}C_6 + 3$ b. ${}^{12}C_6 + 1$
 c. ${}^{12}C_6$ d. ${}^{12}C_6 + 2$
141. How many different nine-digit numbers can be formed from the number 223355888 by rearranging its digits so that the odd digits occupy even positions?
 a. 16 b. 36
 c. 60 d. 180
142. If a, b, c, d are positive real numbers such that $a + b + c + d = 2$, then $M = (a + b)(c + d)$ satisfies the relation
 a. $0 \leq M \leq 1$ b. $1 \leq M \leq 2$
 c. $2 \leq M \leq 3$ d. $3 \leq M \leq 4$
143. In the quadratic equation $ax^2 + bx + c$, if $\Delta = b^2 - 4ac$ and $\alpha + \beta, \alpha^2 + \beta^2, \alpha^3 + \beta^3$ are in GP, where α, β are the roots of $ax^2 + bx + c = 0$, then
 a. $\Delta \neq 0$ b. $b\Delta = 0$
 c. $c\Delta = 0$ d. $\Delta = 0$
144. Let $z = x + iy$ be a complex number, where x and y are integers. Then, the area of the rectangle whose vertices are the roots of the equation $\bar{z}z^3 + z\bar{z}^3 = 350$, is
 a. 48 sq units
 b. 32 sq units
 c. 40 sq units
 d. 80 sq units
145. The largest interval for which $x^{12} - x^9 + x^4 - x + 1 > 0$, is
 a. $-4 < x \leq 0$ b. $0 < x < 1$
 c. $-100 < x < 100$ d. $-\infty < x < \infty$
146. The set of all real numbers x for which $x^2 - |x + 2| + x > 0$, is
 a. $(-\infty, -2)$
 b. $(-\infty, -\sqrt{2}) \cup (\sqrt{2}, \infty)$
 c. $(-\infty, -1) \cup (1, \infty)$
 d. $(\sqrt{2}, \infty)$
147. Let $\mathbf{a}, \mathbf{b}, \mathbf{c}$ be three vectors of magnitude $\sqrt{3}, 1, 2$ such that $\mathbf{a} \times (\mathbf{a} \times \mathbf{c}) + 3\mathbf{b} = \mathbf{0}$. If θ is the angle between $\mathbf{a}$ and $\mathbf{c}$, then $\cos^2 \theta$ is equal to
 a. $\frac{3}{4}$ b. $\frac{1}{2}$
 c. $\frac{1}{4}$ d. None these
148. If resolved part of vector $\mathbf{a}$ along the vector $\mathbf{b}$ is $\mathbf{a}_1$ and that perpendicular to $\mathbf{b}$ is $\mathbf{a}_2$, then $\mathbf{a}_1 \times \mathbf{a}_2$ is equal to
 a. $\frac{(\mathbf{a} \times \mathbf{b}) \mathbf{b}}{|\mathbf{b}|^2}$ b. $\frac{(\mathbf{a} \times \mathbf{b}) \mathbf{a}}{|\mathbf{a}|^2}$
 c. $\frac{(\mathbf{a} \cdot \mathbf{b})(\mathbf{b} \times \mathbf{a})}{|\mathbf{b}|^2}$ d. $\frac{(\mathbf{a} \cdot \mathbf{b})(\mathbf{b} \times \mathbf{a})}{|\mathbf{b} \times \mathbf{a}|}$
149. The graph of the equation $x^2 + y^2 = 0$ in the three dimensional space, is
 a. X -axis b. Y -axis
 c. Z -axis d. xy -plane
150. If the straight lines $\frac{x-1}{k} = \frac{y-2}{2} = \frac{z-3}{3}$ and $\frac{x-2}{3} = \frac{y-3}{k} = \frac{z-1}{2}$ intersect at a point, then integer k is equal to
 a. 2 b. -2
 c. -5 d.

BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as follows Subject
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

Part I Physics	1-40
Part II Chemistry	41-80
Part III (a) English Proficiency	81-95
(b) Logical Reasoning	96-105
Part IV Mathematics	106-150

PART I

Physics

- The coordinates of a moving particle at any time t are given by $x = \alpha t^3$ and $y = \beta t^3$. The speed of the particle at time t is given by
 - $\sqrt{\alpha^2 + \beta^2}$
 - $t\sqrt{\alpha^2 + \beta^2}$
 - $t^2\sqrt{\alpha^2 + \beta^2}$
 - $3t^2\sqrt{\alpha^2 + \beta^2}$
- If power (P), surface tension (T) and Planck's constant (h) are arranged so that the dimensions of time in their dimensional formula are in ascending order, then which of the following is correct ?
 - P, T, h
 - P, h, T
 - T, P, h
 - T, h, P
- A girl runs at a speed of 4 m/s to overtake a standing bus. When she is 6m behind the door at $t = 0$, the bus moves forward and continues this with an acceleration of 1.2 ms^{-2} . The girl reaches the door in time t , then
 - $4t = 6 + 0.6 t^2$
 - $1.2 t^2 = 4t$
 - $4t^2 = 1.2t$
 - $6 + 4t = 0.2 t^2$
- A mass m is attached to the end of a rod of length l . The mass goes along a vertical circular path with the other end hinged at its centre. What should be the minimum velocity of the mass at the bottom of the circle, so that the mass completes the circle?
 - $\sqrt{5 gl}$
 - $\sqrt{2 gl}$
 - $\sqrt{3 gl}$
 - $\sqrt{4 gl}$
- The upper half of an inclined plane with inclination ϕ is perfectly smooth, while the lower half is rough. A body starting from rest at the top will again come to rest at the bottom, if the coefficient of friction for the lower half is
 - $2 \cos \phi$
 - $2 \sin \phi$
 - $2 \tan \phi$
 - $\tan \phi$
- A tennis ball of mass m is floating in air by a jet of water emerging out of a nozzle. If the water strikes the tennis ball with a speed v and just after collision water falls dead, the rate of mass flow of water in the nozzle is equal to
 - $\frac{mv}{g}$
 - $\frac{mg}{v}$
 - $\frac{2mg}{v}$
 - $\frac{2mv}{g}$

7. Which of the following is not an example of perfectly inelastic collision?
- A bullet fired into a block, if bullet gets embedded in block
 - Capture of an electron by an atom
 - A man jumping onto a moving boat
 - A ball bearing striking another ball bearing
8. Consider a uniform square plate of side a and mass m . The moment of inertia of this plate about an axis perpendicular to its plane and passing through one of its corners is
- $\frac{5}{2} ma^2$
 - $\frac{ma^2}{12}$
 - $\frac{7}{12} ma^2$
 - $\frac{2}{3} ma^2$
9. A bimetallic strip consists of metal X and Y. It is mounted rigidly at the base as shown in figure. Metal X has higher coefficient of expansion as compared to metal Y. When the bimetallic strip is placed in a cold bath

- it will bend towards left
 - it will bend towards right
 - it will neither bend nor shrink
 - it will not bend but shrink
10. The excess pressure inside one soap bubble is 3 times that inside a second bubble, then the ratio of their surface area is
- 9 : 1
 - 1 : 27
 - 1 : 3
 - 1 : 9
11. Two equal drops are falling through air with terminal velocity 5 cm/s. If the drop gets combined, the new terminal velocity will be
- 5 × 2 cm/s
 - 5 × 4 cm/s
 - 5 × (4)^{1/3} cm/s
 - 5 × (4)^{2/3} cm/s
12. A wire of length L and cross-sectional area A is made of a material of Young's modulus Y . If the wire is stretched by the amount x , the work done is
- $\frac{YA}{L} x^2$
 - $\frac{YA}{2L} x^2$
 - $\frac{YAL}{x^2}$
 - $Y \frac{AL}{2x^2}$
13. A lead bullet of initial temperature 27°C and speed v km/h penetrates into a solid object and melts. If 50% of the kinetic energy is used to heat it, the value of v in km/h is (for lead, melting point = 600 K, latent heat of fusion = 2.5×10^4 J/kg and specific heat = 125 J/kg K)
- 1000
 - 1800
 - 3600
 - 1200

14. A Carnot's engine operates with source at 127°C and sink at 27°C. If the source supplies 40 kJ of heat energy, the work done by the engine is
- 1 kJ
 - 4 kJ
 - 10 kJ
 - 30 kJ
15. The mass of 1 mole of air is 29×10^{-3} kg, then the speed of sound in air at standard temperature and pressure is
- 332.5 ms⁻¹
 - 300 ms⁻¹
 - 280 ms⁻¹
 - 250 ms⁻¹
16. The equation of wave on a string of linear mass density 0.04 kg/m³ is given by

$$y = 0.02 \text{ (m)} \sin \left[2\pi \left(\frac{t}{0.04 \text{ (s)}} - \frac{x}{0.50 \text{ (m)}} \right) \right]$$

The tension in the string is

- 6.25 N
 - 4.0 N
 - 12.5 N
 - 0.5 N
17. Two bodies M and N of equal masses are suspended from two separate massless springs of spring constants k_1 and k_2 , respectively. If the two bodies oscillate vertically such that their maximum velocities are equal, the ratio of the amplitude of vibration of M to that of N is
- $\sqrt{k_1/k_2}$
 - $\sqrt{k_2/k_1}$
 - k_1/k_2
 - k_2/k_1
18. Two identical capacitors, have the same capacitance C . One of them is charged to potential V_1 and the other to V_2 . The negative end of the capacitors are connected together. When the positive ends are also connected, the decrease in the energy of the combined system is
- $\frac{1}{4} C (V_1^2 - V_2^2)$
 - $\frac{1}{4} C (V_1^2 + V_2^2)$
 - $\frac{1}{4} C (V_1 - V_2)^2$
 - $\frac{1}{4} C (V_1 + V_2)^2$
19. A parallel plate capacitor has its capacitance of 100 pF, when the plates of the capacitor are separated by a distance of t . Then, a metallic foil of thickness $t/3$ is introduced between the plates. The capacitance will then become
- 100 pF
 - 150 pF
 - $\frac{200}{3}$ pF
 - $\frac{100}{3}$ pF
20. Two charges, each equal to q , are kept at $x = -a$ and $x = +a$ on X-axis. A particle of mass m and charge $q_0 = \frac{q}{2}$ is placed at the origin. If charge q_0 is given a small displacement ($y \ll a$) along Y-axis, the net force acting on the particle is proportional to
- y
 - $-y$
 - $\frac{1}{y}$
 - $-\frac{1}{y}$

21. An electric cell of emf E is connected across a copper wire of diameter d and length l . The drift velocity of electrons in the wire is v_d . If the length of the wire is changed to $2l$, the new drift velocity of electrons in the copper wire will be

a. v_d b. $2v_d$
c. $\frac{v_d}{2}$ d. $\frac{v_d}{4}$

22. The resistance of a wire is $5\ \Omega$ at 50°C and $6\ \Omega$ at 100°C , the resistance of the wire at 0°C will be

a. $4\ \Omega$ b. $3\ \Omega$
c. $2\ \Omega$ d. $1\ \Omega$

23. An electric current is passed through a circuit containing two wires of same material connected in parallel. If the lengths and radii of the wires are in the ratio of $\frac{4}{3}$ and $\frac{2}{3}$, then the ratio of the currents passing through the wire will be

a. 3 b. $\frac{1}{3}$
c. $\frac{8}{9}$ d. $\frac{1}{2}$

24. A battery of 10V and internal resistance $0.5\ \Omega$ is connected in parallel with a battery of 12V and internal resistance $0.8\ \Omega$. The terminals are connected by an external resistance of $20\ \Omega$. The current flowing through the $20\ \Omega$ resistance is

a. 0.75 A b. 1.74 A
c. 0.53 A d. 1.21 A

25. A magnetic field of $(4 \times 10^{-3}\ \hat{k})\text{T}$ exerts a force of $(4\hat{i} + 3\hat{j}) \times 10^{-10}\text{N}$ on a particle having charge of $1 \times 10^{-9}\text{C}$ and moving in xy -plane. Find the velocity of the particle.

a. $(75\hat{i} + 100\hat{j})\text{ms}^{-1}$
b. $(75\hat{i} - 100\hat{j})\text{ms}^{-1}$
c. $(-75\hat{i} + 100\hat{j})\text{ms}^{-1}$
d. $(-75\hat{i} - 100\hat{j})\text{ms}^{-1}$

26. A voltmeter has resistance G ohm and range of V volt. The value of resistance used in series to convert into a voltmeter of range nV volt is

a. nG b. $(n-1)G$
c. $\frac{G}{n}$ d. $\frac{G}{n-1}$

27. The earth's magnetic field at a certain place has a horizontal component of 0.3G and total strength 0.5G . Find angle of dip.

a. $\delta = \tan^{-1}\left(\frac{4}{3}\right)$ b. $\delta = \tan^{-1}\left(\frac{3}{4}\right)$
c. $\delta = \tan^{-1}\left(\frac{5}{3}\right)$ d. $\delta = \tan^{-1}\left(\frac{3}{5}\right)$

28. A cylindrical magnet has a length of 5 cm and a diameter of 1 cm. It has a uniform magnetisation of $5.30 \times 10^3\text{A/m}$. What is its magnetic dipole moment?

a. $1 \times 10^{-2}\text{J/T}$ b. $2.08 \times 10^{-2}\text{J/T}$
c. $3.08 \times 10^{-2}\text{J/T}$ d. $1.52 \times 10^{-2}\text{J/T}$

29. A coil of wire of certain radius has 600 turns and a self-inductance of 108 mH. The self-inductance of a second similar coil of 500 turns will be

a. 74 mH b. 75 mH c. 76 mH d. 77 mH

30. Two inductors L_1 and L_2 are connected in parallel and a time varying current flows as shown in figure. The ratio of currents $i_1 : i_2$ at any time t is

a. $\frac{L_2}{L_1}$ b. $\frac{L_1}{L_2}$ c. $\frac{L_2^2}{(L_1 + L_2)^2}$ d. $\frac{L_1^2}{(L_1 + L_2)^2}$

31. The intensity at a point where the path difference is $\frac{\lambda}{6}$ (λ = wavelength of light) is I . If I_0 is the maximum intensity, then I/I_0 is equal to

a. $\frac{\sqrt{3}}{2}$ b. $\frac{1}{2}$ c. $\frac{3}{4}$ d. $\frac{1}{\sqrt{2}}$

32. If a thin prism of glass is dipped into water, then minimum deviation (w.r.t. air) of light produced by prism will be $[(^g\mu_a = 3/2) \text{ and } (^a\mu_w = 4/3)]$

a. $\frac{1}{2}$ b. $\frac{1}{4}$ c. 2 d. $\frac{1}{5}$

33. A ray of light passes from vacuum into a medium of refractive index μ , the angle of incidence is found to be twice the angle of refraction.

Then, angle of incidence is

a. $\cos^{-1}\left(\frac{\mu}{2}\right)$ b. $\sin^{-1}(\mu)$
c. $\sin^{-1}\left(\frac{\mu}{2}\right)$ d. $2 \cos^{-1}\left(\frac{\mu}{2}\right)$

34. For an optical arrangement shown in figure. Find the position of image.

a. + 32 cm b. + 0.6 cm
c. - 6 cm d. 0.5 cm

35. The energy flux of sunlight reaching the surface of the earth is $1.39 \times 10^3 \text{ W m}^{-2}$. If the average wavelength of sunlight is 550 nm, then the number of photons per square metre incident on the earth per second are
 a. 2×10^{21} b. 3×10^{21}
 c. 4×10^{21} d. 4×10^{19}
36. If radius of the $^{27}\text{Al}_{13}$ nucleus is estimated to be 3.6 fermi, then the radius of $^{125}\text{Te}_{52}$ nucleus will be nearly
 a. 5 fermi b. 4 fermi c. 8 fermi d. 6 fermi
37. The binding energy of an electron in the ground state of He is equal to 24.6 eV. The energy required to remove both the electrons is
 a. 49.2 eV b. 24.6 eV
 c. 38.2 eV d. 79.0 eV
38. A radioactive nucleus can decay simultaneously by two different processes which have decay constant λ_1 and λ_2 .

The effective decay constant of the nuclide is λ , where

- a. $\lambda = \lambda_1 + \lambda_2$ b. $\lambda = 2(\lambda_1 + \lambda_2)$
 c. $\frac{1}{\lambda} = \frac{1}{\lambda_1} + \frac{1}{\lambda_2}$ d. $\lambda = \sqrt{\lambda_1 \lambda_2}$

39. A junction diode is connected to a 10 V source and $10^3 \Omega$ rheostat figure. The slope of load line on the characteristics curve of diode will be

- a. 10^{-2} AV^{-1} b. 10^{-3} AV^{-1}
 c. 10^{-4} AV^{-1} d. 10^{-5} AV^{-1}
40. If minimum voltage in an AM wave was found to be 2V and maximum voltage 10V. Find % modulation index.
 a. 80% b. 66.67% c. 64.25% d. 76.25%

PART II

Chemistry

41. For the reaction, $2A(g) + B(g) \rightleftharpoons 3C(g) + D(g)$, 2 moles each of A and B were taken into a flask. The following must always be true when the system attained equilibrium.
 a. $[A] < [B]$ b. $[A] = [B]$ c. $[B] = [C]$ d. $[A] > [B]$
42. The pH at which an acid indicator with $K_a = 1 \times 10^{-5}$ changes colour when the indicator is $1 \times 10^{-3} \text{ M}$, is
 a. 4 b. 3 c. 5 d. 6
43. Which of the following reactions does not involve oxidation-reduction?
 I. $2\text{Cs} + 2\text{H}_2\text{O} \longrightarrow 2\text{CsOH} + \text{H}_2$
 II. $2\text{CuI}_2 \longrightarrow 2\text{CuI} + \text{I}_2$
 III. $\text{NH}_4\text{Br} + \text{KOH} \longrightarrow \text{KBr} + \text{NH}_3 + \text{H}_2\text{O}$
 IV. $4\text{KCN} + \text{Fe}(\text{CN})_2 \longrightarrow \text{K}_4[\text{Fe}(\text{CN})_6]$
 a. I and II b. I, III and IV
 c. I and III d. III and IV
44. 1 L of $N/2$ HCl solution was heated in a beaker. When the volume was reduced to 600 mL, 9.125 g of HCl was lost out. The new normality of solution is approximately
 a. 0.2 b. 0.4 c. 0.8 d. 0.7
45. Which of the following is the strongest Bronsted acid?
 a. b. c. d.
46. The compounds which are functional isomers from the following, are
 a. and b. and
 c. and d. and
47. At which of the following four conditions will the density of nitrogen be the largest?
 a. 273 K and 2 atm b. 546 K and 1 atm
 c. 546 K and 2 atm d. STP
48. The IUPAC name of is
 a. 3-methylbutane-1,4-diamine
 b. 3-(aminomethyl) butanamine
 c. 2-(aminomethyl) butan-4-amine
 d. 2-methylbutane-1, 4-diamine
49. The vapour pressure of pure water at 25°C is 23 torr. Then, the vapour pressure of 100 g of water to which 100 g of $\text{C}_6\text{H}_{12}\text{O}_6$ has been added, is
 a. 15.6 torr
 b. 21.3 torr
 c. 26.7 torr
 d. 24.8 torr

50. The correct order of magnetic moment (in BM) of the following is

- $[\text{Fe}(\text{CN})_6]^{4-} > [\text{MnCl}_4]^{2-} > [\text{CoCl}_4]^{2-}$
- $[\text{MnCl}_4]^{2-} > [\text{Fe}(\text{CN})_6]^{4-} > [\text{CoCl}_4]^{2-}$
- $[\text{MnCl}_4]^{2-} > [\text{CoCl}_4]^{2-} > [\text{Fe}(\text{CN})_6]^{4-}$
- $[\text{Fe}(\text{CN})_6]^{4-} > [\text{CoCl}_4]^{2-} > [\text{MnCl}_4]^{2-}$

51. What is the product of the following reaction?

- $\text{CH}_3\text{OCH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}(\text{OH})\text{CH}_3$
- $\text{HOCH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{C}(\text{OH})(\text{CH}_3)_2$
- $\text{HO}-\text{CH}(\text{CH}_3)\text{CH}_2\text{CH}_2\text{CH}_2\text{CH}(\text{CH}_3)-\text{OH}$
- $\text{HOCH}_2\text{CH}_2\text{CH}_2\text{CH}_2\text{C}(\text{OH})(\text{CH}_3)_2$

52. Which of the following alkyl halide undergo rearrangement in $\text{S}_{\text{N}}1$ reaction?

-
-
- $\text{CH}_3-\text{C}(\text{CH}_3)_2-\text{CH}(\text{I})-\text{CH}_3$
- All of these

53. The ionic equivalent conductivity of $\text{C}_2\text{O}_4^{2-}$, K^+ and Na^+ ions are x , y , z $\text{S cm}^2 \text{eq}^{-1}$ respectively. Then, $\Lambda^\circ_{\text{eq}}$ of $(\text{NaOOC}-\text{COOK})$ is

- $x + y + z$
- $x - \frac{y}{2} + \frac{z}{2}$
- $x + \frac{y}{2} + \frac{z}{2}$
- $x + \frac{y}{2} - \frac{z}{2}$

54. The decreasing order of basic character of the transition metal monoxides is

- $\text{VO} > \text{CrO} > \text{TiO} > \text{FeO}$
- $\text{TiO} > \text{FeO} > \text{VO} > \text{CrO}$
- $\text{CrO} > \text{VO} > \text{FeO} > \text{TiO}$
- $\text{TiO} > \text{VO} > \text{CrO} > \text{FeO}$

55. At 25°C in the saturated solution of Ag_2CrO_4 , if concentration of Ag^+ ion is $1.0 \times 10^{-5} \text{ mol/L}$, then the solubility product of Ag_2CrO_4 at 25°C , is

- $5 \times 10^{-3} \text{ mol}^2 \text{L}^{-3}$
- $5 \times 10^{-15} \text{ mol}^2 \text{L}^{-3}$
- $5 \times 10^{-16} \text{ mol}^2 \text{L}^{-3}$
- $5 \times 10^{-14} \text{ mol}^2 \text{L}^{-3}$

56. The gold numbers of protective colloids A, B, C and D are 0.04, 0.002, 10 and 25, respectively. The protective powers of A, B, C and D are in the order

- $D > C > A > B$
- $B > C > A > D$
- $D > C > B > A$
- $B > A > C > D$

57. Ammonia, manufactured by the Haber's process is usually carried out at about 500°C . If a temperature of about 250°C was used instead of 500°C , then

- no ammonia would be formed at all
- the percentage of ammonia in the equilibrium mixture would be too low
- a catalyst would be of no use at all at this temperature
- the rate of formation of ammonia would be too slow

58. The edge length of a body-centred cubic unit cell is 390 pm. If the radius of the cation is 150 pm, then, the radius of the anion is

- 180.3 pm
- 187.7 pm
- 193.4 pm
- 162.4 pm

59. For the reaction $2\text{NO}_2 \longrightarrow 2\text{NO} + \text{O}_2$, activation energy is 110 kJ/mol. At 400°C , the rate constant is $7.8 \text{ mol}^{-1} \text{L s}^{-1}$. The value of rate constant at 430°C is

- $16 \text{ mol}^{-1} \text{L s}^{-1}$
- $18 \text{ mol}^{-1} \text{L s}^{-1}$
- $13 \text{ mol}^{-1} \text{L s}^{-1}$
- $19 \text{ mol}^{-1} \text{L s}^{-1}$

60. Choose the correct statement from the following.

- Both CH_3I and CF_3I reacts with $\text{Na}^+ [\text{Mn}(\text{CO})_5]^-$ and forms $\text{I}^+ [\text{Mn}(\text{CO})_5]^-$
- Both CH_3I and CF_3I reacts with $\text{Na}^+ [\text{Mn}(\text{CO})_5]^-$ and for $[\text{CH}_3]^+ [\text{Mn}(\text{CO})_5]^-$
- CH_3I reacts with $\text{Na}^+ [\text{Mn}(\text{CO})_5]^-$ forms $[\text{CH}_3]^+ [\text{Mn}(\text{CO})_5]^-$ while CF_3I forms $\text{I}^+ [\text{Mn}(\text{CO})_5]^-$
- CH_3I reacts with $\text{Na}^+ [\text{Mn}(\text{CO})_5]^-$ forms $\text{I}^+ [\text{Mn}(\text{CO})_5]^-$ while CF_3I forms $[\text{CF}_3]^+ [\text{Mn}(\text{CO})_5]^-$

61. 6×10^{24} atoms of an element weigh 200 g. If this element form homodiatom gas, then the molar mass of gas is

- 30
- 40
- 20
- 45

62. The correct decreasing order of the following towards nucleophilic addition reaction is

- $\text{IV} > \text{III} > \text{II} > \text{I}$
- $\text{II} > \text{III} > \text{IV} > \text{I}$
- $\text{I} > \text{II} > \text{III} > \text{IV}$
- $\text{I} > \text{IV} > \text{III} > \text{II}$

79. The correct increasing order of acidic character of the following is

I

II

III

- a. III < I < II b. II < I < III c. I < III < II d. II < III < I

80. Which of the following contains greatest number of N-atoms?

- a. 1.0 mole of NH_4Cl
 b. 6.02×10^{23} molecules of NO_2
 c. 22.4 L nitrogen gas at STP
 d. 500 mL of 2.0 M NH_3

PART III

a. English Proficiency

Directions (Q. Nos. 81 to 84) *Read the passage and then choose the most suitable option from the given ones.*

It was a very cold evening and so few people were seen out on the streets. I did not go out myself although it was my habit not to keep indoors after sunset. So, I closed all the doors and windows of my room, took the book which had been lying opened on the table and tried to read it. The cold was getting so severe that I started shivering, so I wrapped myself up with a bigger blanket. But I could not continue reading the book because I was nearly rendered incapable of turning the pages.

81. The author's habit was to
 a. read in the evening b. sleep in the evening
 c. go out in the evening d. play in the evening
82. If it was not so cold the author would have
 a. liked to work
 b. liked to sit and look out to the streets
 c. liked to read
 d. liked to have a stroll
83. The author could not continue reading the book because
 a. he did not like to b. he was feeling tired
 c. he was feeling very cold d. the lights had gone off
84. There were not many people outside because
 a. it was a rainy evening
 b. it was a cold evening
 c. it was a dark evening
 d. there was heavy show outside

Directions (Q. Nos. 85 to 88) *Rearrange the jumbled up parts of the sentence and choose the appropriate option.*

85. With an unsteady hand
 P : on my desk
 Q : from his pocket
 R : he took an envelope
 S : and threw it
 The proper sequence should be
 a. QRPS b. QRSP c. RQSP d. RQSP

86. P : she gave her old coat
 Q : to a beggar
 R : the one with the brown fur on it
 S : shivering with cold

The proper sequence should be

- a. SQRP b. SPRQ
 c. PRQS d. PSQR

87. S1 : I last visited Kandy almost 10 years ago.

S6 : Set around low, forested hills. with the Mahavelli river flowing nearby, the landscape has an instance yet tranquil beauty.

P : The bomb blasts and ugly face of ethnic conflict have not robbed the place of its gracious pace of life

Q : Theartificial lake, which dominates the landscape of the city, was built by its last king in 1806

R : Located in central Sri Lanka, at an elevation of about 1600 ft, Kandy was the last Sinhala outpost of autonomy, resisting both Protuguese and Dutch rule before it succumbed to the British in 1818

S : Most famous for its Temple of the Tooth, a golden pagoda, elegant and imperaturable city

The proper sequence should be

- a. RPQS b. SPRQ c. QSPR d. PSQR

88. S1 : The status of women in our country is, on the whole, far from high.

S6 : Education can lift these moment out of the depths of misery and ignorance into which they have sunk.

P : But the plight of women in village is still miserable

Q : The educated women in cities enjoy equality with the men folk.

R : The moment for the freedom and rights of women has certainly been steadily gaining momentum

S : Their education has been throughly neglected.

The proper sequence should be

- a. RPQS b. RQPS c. SQPR d. SPQR

Directions (Q. Nos. 89-92) *In the sentences given below there is an error in one of the parts. Choose that part as your answer.*

89. She misplaced her spectacle (a)/ is now feeling (b)/ great difficulty in studying. (c)/ No error (d)
90. Arabian Nights are (a)/a collection of (b)/ very interesting episodes of adventure. (c)/No error (d)
91. I hope to visit (a)/my uncle only next year (b)/during summer vacations. (c)/No error (d)
92. Ration has run out (a)/and the District Magistrate (b)/ has been informed. (c)/No error (d)

Directions (Q. Nos. 93 to 95) *The underlined part of the sentence may need an improvement. Choose the option that suits the improvement in best way.*

93. Five year ago today, I am sitting in a small Japanese car driving across Poland toward Berlin.
a. was sitting b. sat
c. have been sitting d. No improvement
94. Sumit had told me that he hasn't done it yet.
a. told
b. tells
c. was telling
d. No improvement
95. The record for the biggest tiger hunt has not been met since 1911 when Lord Hardinge, then Viceroy of India, shot a tiger measured 11 feet and 6 inches.
a. improved b. broken
c. bettered d. No improvement

b. Logical Reasoning

96. In a class, boy stand in a single line. One of the boys in nineteenth in order from both the ends. How many boys are there in the class?
a. 27 b. 37 c. 38 d. 39

97. Find out the odd figure

98. Find out next term in the series.

5, 6, 9, 14, 21, ?

- a. 28 b. 30 c. 31 d. 29

99. How many triangles are there in the given figure?

- a. 5 b. 6 c. 7 d. 8

100. If the day before yesterday was Friday, what day will two days after the day after tomorrow be ?

- a. Saturday b. Thursday c. Friday d. Sunday

101. In the problem figure, which figure will replace the question mark (?) from the answer figures ?

Problem Figures

Answer Figures

102. Find out which of the answer figures (a), (b), (c) and (d) completes the figures matrix.

Problem Figure

Answer Figures

103. The missing in the figure shown below is

- a. 45 b. 54
c. 72 d. 90

104. Figure (X) is embedded in one of the four alternative figures (a), (b), (c) and (d).

Find the alternative which contains figures (X) as its part.

105. Find the water image of the word given below

TOP

- a. 1ob b. .toq
c. tob d. 1op

PART IV

Mathematics

- 106.** The set of all values of x satisfying $x^{\log_x(1-x)^2} = 9$, is
 a. a subset of R containing N
 b. a subset of R containing Z (set of all integers)
 c. a finite set containing atleast two elements
 d. a finite set
- 107.** If $f(x) = \sin^6 x + \cos^6 x$, then range of $f(x)$ is
 a. $\left[\frac{1}{4}, 1\right]$
 b. $\left[\frac{1}{4}, \frac{3}{4}\right]$
 c. $\left[\frac{3}{4}, 1\right]$
 d. None of these
- 108.** If $a \sin x + b \cos(x + \theta) + b \cos(x - \theta) = d$, then the minimum value of $|\cos \theta|$ is
 a. $\frac{1}{2|b|} \sqrt{d^2 - a^2}$
 b. $\frac{1}{2|a|} \sqrt{d^2 - a^2}$
 c. $\frac{1}{2|d|} \sqrt{d^2 - a^2}$
 d. None of the above
- 109.** The set of values of x in $(0, \pi)$ satisfying the equation $1 + \log_2 \sin x + \log_2 \sin 3x \geq 0$, is
 a. $\left(\frac{2\pi}{3}, \frac{3\pi}{4}\right]$
 b. $\left(\frac{\pi}{2}, \frac{2\pi}{3}\right)$
 c. $\left(0, \frac{\pi}{2}\right) \cup \left(\frac{2\pi}{3}, \pi\right)$
 d. $\left(\frac{\pi}{2}, \frac{2\pi}{3}\right)$
- 110.** If $\cot^{-1}(\sqrt{\cos \alpha}) - \tan^{-1}(\sqrt{\cos \alpha}) = x$, then $\sin x$ equals
 a. $\tan^2 \frac{\alpha}{2}$
 b. $\cot^2 \frac{\alpha}{2}$
 c. $\tan \alpha$
 d. $\cot \frac{\alpha}{2}$
- 111.** In $\triangle ABC$, if P, Q, R divides sides BC, AC and AB respectively in the ratio $k : 1$ and $\frac{\text{area of } \triangle PQR}{\text{area of } \triangle ABC} = \frac{1}{3}$, then k is equal to
 a. $1/3$
 b. 2
 c. 3
 d. None of these
- 112.** A line is drawn perpendicular to line $y = 5x$, meeting the coordinate axes at A and B . If the area of $\triangle OAB$ is 10 sq units, where O is the origin, then the equation of drawn line is
 a. $3x - y = 9$
 b. $x + 5y = 10$
 c. $x + 4y = 10$
 d. $x - 4y = 10$
- 113.** If the slope of one of the lines represented by $ax^2 + 2hxy + by^2 = 0$ is the square of other, then $\frac{a+b}{h} + \frac{bh^2}{ab}$ equals
 a. 4
 b. 6
 c. 8
 d. None of these
- 114.** If the circle having radii r_1 and r_2 intersect orthogonally, then the length of their common chord is
 a. $\frac{2r_1r_2}{\sqrt{r_1^2 + r_2^2}}$
 b. $\frac{\sqrt{r_1^2 + r_2^2}}{2r_1r_2}$
 c. $\frac{r_1r_2}{\sqrt{r_1^2 + r_2^2}}$
 d. $\frac{\sqrt{r_1^2 + r_2^2}}{r_1r_2}$
- 115.** AB is double ordinate of the parabola $y^2 = 4ax$. Tangents drawn to the parabola at A and B meet Y -axis at A_1 and B_1 , respectively. If the area of trapezium AA_1B_1B is equal to $12a^2$, then the angle subtended by A_1B_1 at the focus of the parabola is equal to
 a. $2 \tan^{-1} 3$
 b. $\tan^{-1} 3$
 c. $2 \tan^{-1} 2$
 d. $\tan^{-1} 2$
- 116.** The line $y = mx - \frac{(a^2 - b^2)m}{\sqrt{a^2 + b^2m^2}}$ is normal to the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ for all values of m belonging to
 a. $(0, 1)$
 b. $(0, \infty)$
 c. R
 d. None
- 117.** Let E^c denotes the complement of an event E . If E, F, G are pairwise independent events with $P(G) > 0$ and $P(E \cap F \cap G) = 0$, then $P(E^c \cap F^c / G)$ equals
 a. $P(E^c) + P(F^c)$
 b. $P(E^c) - P(F^c)$
 c. $P(E^c) - P(F)$
 d. $P(E) - P(F^c)$
- 118.** Let M and N be two 3×3 non-singular and skew-symmetric matrices such that $MN = NM$. If P^T denotes the transpose of P , then $M^2N^2(M^TN)^{-1}(MN^{-1})^T$ is equal to
 a. M^2
 b. $-N^2$
 c. $-M^2$
 d. MN
- 119.** Consider the set A of all determinants of order 3 with entries 0 or 1 only. Let B be the subset of A consisting of all determinants with values -1 . Then,
 a. C is empty
 b. B has as many elements as C
 c. $A = B \cup C$
 d. B has twice as many elements as C
- 120.** The value of $\binom{30}{0}\binom{30}{10} - \binom{30}{1}\binom{30}{11} + \binom{30}{2}\binom{30}{12} - \dots + \binom{30}{20}\binom{30}{30}$ where $\binom{n}{r} = {}^nC_r$, is
 a. $\binom{30}{10}$
 b. $\binom{30}{15}$
 c. $\binom{60}{30}$
 d. $\binom{31}{10}$
- 121.** Let $S = \{1, 2, 3, 4\}$, then the total number of unordered pairs of disjoint subsets of S is equal to
 a. 25
 b. 34
 c. 42
 d. 41

- 122.** If $a_1, a_2, \dots, a_n$ are positive real numbers whose product is a fixed number c , then the minimum value of $a_1 + a_2 + \dots + a_{n-1} + 2a_n$ is
 a. $n(2c)^{1/n}$ b. $(n+1)c^{1/n}$
 c. $2nc^{1/n}$ d. $(n+1)(2c)^{1/n}$
- 123.** For a a positive integer n , let $a(n) = 1 + \frac{1}{2} + \frac{1}{3} + \frac{1}{4} + \dots + \frac{1}{(2^n) - 1}$. Then,
 a. $a(200) < 100$ b. $a(200) \geq 100$
 c. $a(200) \leq 100$ d. $a(200) > 100$
- 124.** Let z be a complex number such that the imaginary part of z is non-zero and $a = z^2 + z + 1$ is real. Then, a cannot take the value
 a. -1 b. $1/3$ c. $1/2$ d. $3/4$
- 125.** If α and β are the roots of $x^2 + px + q = 0$ and α^4, β^4 are the roots of $x^2 - rx + s = 0$, then the equation of $x^2 - 4qx + 2q^2 - r = 0$ has always
 a. one positive and one negative root
 b. two positive roots
 c. two negative roots
 d. can't say anything
- 126.** If x satisfies $|x - 1| + |x - 2| + |x - 3| \geq 6$, then
 a. $0 \leq x \leq 4$ b. $x \leq -2$ or $x \geq 4$
 c. $x \leq 0$ or $x \geq 4$ d. None of these
- 127.** The standard deviation of some temperature data (in $^\circ\text{C}$) is 5. If the data were converted into $^\circ\text{F}$, then the variance would be
 a. 81 b. 57 c. 36 d. 25
- 128.** The solution of the differential equation $xdy - ydx = \sqrt{x^2 + y^2}dx$, is
 a. $x + \sqrt{x^2 + y^2} = Cx^2$ b. $y - \sqrt{x^2 + y^2} = Cx$
 c. $x - \sqrt{x^2 + y^2} = Cx$ d. $y + \sqrt{x^2 + y^2} = Cx^2$
- 129.** Let the straight line $x = b$ divide the area enclosed by $y = (1-x)^2$, $y = 0$ and $x = 0$ into two parts R_1 ($0 \leq x \leq b$) and R_2 ($b \leq x \leq 1$) such that $R_1 - R_2 = \frac{1}{4}$. Then, b equals
 a. $\frac{3}{4}$ b. $\frac{1}{2}$ c. $\frac{1}{3}$ d. $\frac{1}{4}$
- 130.** The value of $\int_0^{100} [\tan^{-1} x] dx$ is
 a. 100 b. $100 - \tan^{-1} 1$
 c. $100 - \tan 1$ d. None of these
- 131.** $\int \frac{x-1}{(x+1)\sqrt{x^3+x^2+x}} dx$ equals
 a. $\tan^{-1}\left(\frac{x^2+x+1}{x}\right) + C$ b. $2 \tan^{-1}\left(\frac{x^2+x+1}{x}\right) + C$
 c. $3 \tan^{-1}\left(\frac{x^2+x+1}{x}\right) + C$ d. None of these
- 132.** The critical points of $f(x) = \frac{|2-x|}{x^2}$ are
 a. $x = 0, 2$ b. $x = 2, 4$
 c. $x = 2, -4$ d. None of these
- 133.** The length of the longest interval in which the function $3 \sin x - 4 \sin^3 x$ is increasing, is
 a. $\pi/3$ b. $\pi/2$ c. $3\pi/2$ d. π
- 134.** If $27a + 9b + 3c + d = 0$, the equation $4ax^3 + 3bx^2 + 2cx + d = 0$ has atleast one real root lying between
 a. 0 and 1 b. 1 and 3
 c. 0 and 3 d. None
- 135.** If the parabolas $y = x^2 + ax + b$ and $y = x(c - x)$ touch each other at the point (1, 0), then $a + b + c$ equals
 a. 1 b. -1 c. 0 d. None
- 136.** Let f be a differentiable function satisfying $[f(x)]^n = f(nx)$ for all $x \in R$. Then, $f'(x) f(nx)$ equals
 a. $f(x)$ b. 0
 c. $f(x) f'(nx)$ d. None of these
- 137.** If $f(x - y), f(x) f(y)$ and $f(x + y)$ are in A.P. for all $x, y \in R$ and $f(0) = 0$, then
 a. $f'(-2) = f'(2)$ b. $f'(-3) = -f'(3)$
 c. $f'(-2) + f'(2) = 0$ d. None of these
- 138.** If $f(x) = \frac{[x]}{|x|}$, $x \neq 0$, where $[]$ denotes the greatest integer function, then $f'(1)$ equals
 a. -1 b. 1
 c. Does not exist d. None of these
- 139.** The value of $\lim_{n \rightarrow \infty} \{\sqrt[3]{n^2 - n^3} + n\}$, is
 a. $\frac{1}{3}$ b. $-\frac{1}{3}$ c. $\frac{2}{3}$ d. $-\frac{2}{3}$
- 140.** The domain of definition of $f(x) = \sin^{-1}\{\log_2(x^2 + 3x + 4)\}$ is
 a. $[-4, -1/4]$ b. $[-3, -1/3]$
 c. $[-2, -1]$ d. None of these
- 141.** If the range of a random variable X is 0, 1, 2, 3, ... with $P(X = k) = \left(\frac{k+1}{3^k}\right) a$ for $k \geq 0$, then a equals
 a. $2/3$ b. $4/9$ c. $8/27$ d. $16/81$
- 142.** Let $S(k) = 1 + 3 + 5 + \dots + (2k - 1) = 3 + k^2$. Then, which one of the following is true?
 a. Principle of mathematical induction can be used to prove the formula
 b. $S(k) \Rightarrow S(k+1)$
 c. $S(k) \nRightarrow S(k+1)$
 d. $S(1)$ is correct

143. The false statement in the following is
 a. $p \wedge (\sim p)$ is a contradiction
 b. $(p \rightarrow q) \leftrightarrow (\sim q \rightarrow \sim p)$ is a contradiction
 c. $\sim (\sim p) \leftrightarrow p$ is tautology
 d. $p \wedge (\sim p)$ is a tautology
144. Let $f: R \rightarrow R$ be given by $f(x) = [x^2] + [x + 1] - 3$, where $[x]$ denotes the greatest integer less than or equal to x . Then, $f(x)$ is
 a. many-one and onto b. many-one and into
 c. one-one and into d. one-one and onto
145. The relation on the set $A = \{x: |x| < 3, x \in Z\}$ is defined by $R = \{(x, y): y = |x|, x \neq -1\}$. Then, the number of elements in the power set of R is
 a. 32 b. 16 c. 8 d. 64
146. If $A = \{\theta: \cos \theta > -1/2, 0 \leq \theta \leq \pi\}$ and $B = \{\theta: \sin \theta > 1/2, \pi/3 \leq \theta \leq \pi\}$, then
 a. $A \cap B = \{\theta: \pi/3 \leq \theta \leq 2\pi/3\}$
 b. $A \cap B = \{\theta: -\pi/3 \leq \theta \leq 2\pi/3\}$
 c. $A \cup B = \{\theta: -5\pi/6 \leq \theta \leq 5\pi/6\}$
 d. $A \cup B = \{\theta: 0 \leq \theta \leq \pi/6\}$
147. A vector which makes equal angles with the vectors $\frac{1}{3}(\hat{i} - 2\hat{j} + 2\hat{k}), \frac{1}{5}(-4\hat{i} - 3\hat{k}), \hat{j}$, is
 a. $5\hat{i} + \hat{j} + 5\hat{k}$ b. $-5\hat{i} + \hat{j} + 5\hat{k}$
 c. $5\hat{i} - \hat{j} - 5\hat{k}$ d. $5\hat{i} + \hat{j} - 5\hat{k}$
148. The vectors $\mathbf{a} = x\hat{i} + (x+1)\hat{j} + (x+2)\hat{k}$, $\mathbf{b} = (x+3)\hat{i} + (x+4)\hat{j} + (x+5)\hat{k}$ and $\mathbf{c} = (x+6)\hat{i} + (x+7)\hat{j} + (x+8)\hat{k}$ are coplanar for
 a. all values of x b. $x < 0$
 c. $x > 0$ d. None of the above
149. If the direction cosines of a straight line are k, k, k , then
 a. $k > 0$ b. $0 < k < 1$
 c. $k = 1$ d. $k = \frac{1}{\sqrt{3}}$ or $\frac{-1}{\sqrt{3}}$
150. Let the line $\frac{x-2}{3} = \frac{y-1}{-5} = \frac{z+2}{2}$ lie in the plane $x + 3y - \alpha z + \beta = 0$. Then, (α, β) equals
 a. $(6, -17)$ b. $(-6, 7)$
 c. $(5, -15)$ d. $(-5, 5)$

Practice Set 5

BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as follows Subject
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

Part I Physics	1-40
Part II Chemistry	41-80
Part III (a) English Proficiency	81-95
(b) Logical Reasoning	96-105
Part IV Mathematics	106-150

PART I

Physics

- Charges $+q$ and $-q$ are placed at points A and B respectively, which are a distance $2L$ apart. C is the mid-point between the points A and B . The work done in moving a charge $+Q$ along the semi-circle CRD is
 - $\frac{-qQ}{6\pi\epsilon_0 L}$
 - $\frac{-qQ}{4\pi\epsilon_0 L}$
 - $\frac{qQ}{6\pi\epsilon_0 L}$
 - $\frac{-Qq}{2\pi\epsilon_0 L}$
- In the given figures, which one of the diode shown is reverse biased?

a.

b.

c.

d.
- The wavelength of the first line of Lyman series for hydrogen atom is equal to that of the second line of Balmer series of hydrogen like ion. The atomic number Z of hydrogen like atom is
 - 2
 - 3
 - 4
 - 1
- In a Young's double slit experiment, the angular position (θ) of a bright fringe having intensity one forth of the maximum intensity is given by

a. $\sin^{-1}\left(\frac{\lambda}{4d}\right)$

c. $\sin^{-1}\left(\frac{\lambda}{2d}\right)$

b. $\sin^{-1}\left(\frac{\lambda}{3d}\right)$

d. $\sin^{-1}\left(\frac{\lambda}{d}\right)$

5. A tank of height 33.25 cm is completely filled with a liquid of index of refraction 1.33. A concave mirror of focal length 15.0 cm is placed above the tank as shown in figure. An object is placed at the bottom of the tank on the axis of concave mirror and its image is formed at a distance 25.0 cm below the surface of the liquid. The focal length of the mirror is

- a. 10 cm b. 18.3 cm c. 20.3 cm d. 25.0 cm

6. In a series resonant LCR circuit, the voltage across R is 100 V and $R = 1\text{ k}\Omega$ with $C = 2\mu\text{F}$. The resonant frequency ω is 200 rad/s. At resonance the voltage across L is
 a. $4 \times 10^{-3}\text{ V}$ b. $2.5 \times 10^{-2}\text{ V}$
 c. 40 V d. 250 V
7. A 2700Ω resistor and a $1.1\mu\text{F}$ capacitor are connected in series across a generator (60 Hz, 120 V). Determine the average power consumed in the circuit.
 a. 3 W b. 9 W c. 10 W d. 7 W
8. Needles N_1 , N_2 and N_3 are made of ferromagnetic, a paramagnetic and a diamagnetic substance, respectively. A magnet when brought close to them will
 a. attract all three of them
 b. attract N_1 and N_2 strongly but repel N_3
 c. attract N_1 strongly, N_2 weakly and repel N_3 weakly
 d. attract N_1 strongly, but repel N_2 and N_3 weakly
9. A long straight wire of radius a carries a steady current I . The current is uniformly distributed across its cross-section, the ratio of the magnetic field at $\frac{a}{2}$ and $2a$ is

- a. $\frac{1}{4}$ b. 4 c. 1 d. $\frac{1}{2}$

10. A current carrying closed loop in the form of a right angle isosceles $\triangle ABC$ is placed in a uniform magnetic field acting along AB . If the magnetic force on the arm BC is F , then force on arm AC is

- a. $\sqrt{2} F$ b. $-\sqrt{2} F$ c. $-F$ d. F

11. Figure shows an arrangement known as a Helmholtz coil. It consists of two circular coaxial coils each of 200 turns and radius $R = 25.0\text{ cm}$ separated by a distance $S = R$. The two coils carry equal currents $I = 12.2\text{ mA}$ in the same direction. Find the magnitude of the net magnetic field at P , mid-way between the coils.

- a. $8.7 \times 10^{-6}\text{ T}$ b. $6.7 \times 10^{-6}\text{ T}$
 c. $5.7 \times 10^{-6}\text{ T}$ d. $10.7 \times 10^{-6}\text{ T}$

12. A material B has twice the specific resistance of another material A . A circular wire made of B has twice the diameter of a wire made of A . Then for the two wires to have the same resistance the ratio $\frac{l_A}{l_B}$ of their respective length must be
 a. 2 b. 1 c. $\frac{1}{2}$ d. $\frac{1}{4}$
13. In a potentiometer experiment, the balancing with a cell is at length 240 cm on shunting the cell with a resistance of 2Ω the balancing length 120 cm. The internal resistance of the cell is
 a. 1Ω b. 0.5Ω c. 4Ω d. 2Ω
14. At time $t = 0$, a battery of 10 V is connected across points A and B shown in figure. If the capacitors have no charge initially at what time does the voltage across becomes 4V?

- a. 2s b. 3s
 c. 4s d. 5s

15. A thin semicircular ring of radius r as shown in figure as a positive charge q distributed uniformly over it. The net field E at the centre O is

- a. $\frac{q}{2\pi^2\epsilon_0 r} \hat{j}$ b. $\frac{q}{4\pi^2\epsilon_0 r^2} \hat{j}$
 c. $-\frac{q}{4\pi^2\epsilon_0 r^2} \hat{j}$ d. $-\frac{q}{2\pi^2\epsilon_0 r^2} \hat{j}$

16. The decreasing order of wavelength of infrared, microwaves, ultraviolet and gamma rays is
 a. infrared, microwaves, ultraviolet, gamma rays
 b. microwaves, infrared, ultraviolet, gamma rays
 c. gamma rays, ultraviolet, infrared, microwaves
 d. microwaves, gamma rays, infrared, ultraviolet
17. Light with an energy flux of 18 W/cm^2 on a non-reflecting surface at normal incidence. If the surface has an area of 20 cm^2 . Find the average force exerted on the surface during a 30 min time span
 a. $1.2 \times 10^{-6} \text{ N}$ b. $2.4 \times 10^{-6} \text{ N}$
 c. $4.8 \times 10^{-6} \text{ N}$ d. $6.2 \times 10^{-6} \text{ N}$
18. An anatomist is viewing heart muscles cells with a microscope that has two selectable objectives with refracting powers of 100 and 300 D. When she uses the 100 D objective, the image of a cell subtends an angle of $3 \times 10^{-3} \text{ rad}$ with the eye. What angle is subtended when she uses the 300 D objective?
 a. $9 \times 10^{-3} \text{ rad}$ b. $3 \times 10^{-3} \text{ rad}$
 c. $2 \times 10^{-3} \text{ rad}$ d. $10 \times 10^{-3} \text{ rad}$
19. A sheet of silver is illuminate by monochromatic ultraviolet radiations of wavelength $1810 \text{ \AA}$. What is the maximum energy of the emitted electron?
 The threshold wavelength of silver is $2640 \text{ \AA}$.
 a. 9.16 eV b. 2.16 eV
 c. 3.16 eV d. 4.16 eV
20. Two radioactive materials X_1 and X_2 have decay constants 5λ and λ , respectively. If initially they have the same number of nuclei, then the ratio of the number of nuclei of X_1 to that of X_2 will be $1/e$ after a time
 a. $\frac{e}{\lambda}$ b. λ c. $\frac{1}{2}\lambda$ d. $\frac{1}{4\lambda}$
21. The period of oscillation of simple pendulum is $T = 2\pi\sqrt{\frac{l}{g}}$ measured value of L is 20.0 cm known to 1 mm accuracy and time for 100 oscillations of the pendulum is found to be 90 s using a wrist watch of 1s resolution. What is the accuracy in the determination of g ?
 a. 3 % b. 1 % c. 5 % d. 2 %
22. Find the resultant of three vectors $\vec{OA}$, $\vec{OB}$ and $\vec{OC}$ as shown in figure. Radius of the circle is R .

- a. $R(1 + \sqrt{2})$ b. $R(2 + \sqrt{2})$
 c. $R(3 + \sqrt{2})$ d. $R(4 + \sqrt{2})$

23. A ball is thrown from a field with a speed of 12.0 m/s at an angle of 45° with the horizontal. At what distance will it hit the field again? (Take, $g = 10.0 \text{ m/s}^2$)
 a. 10 m b. 14.4 m
 c. 16.4 m d. 18.4 m
24. With what acceleration a should the box of figure descend, so that the block of mass M exerts a force $mg/4$ on the floor of the box?

- a. $\frac{2g}{5}$ b. $\frac{3g}{5}$ c. $\frac{g}{2}$ d. $\frac{3g}{4}$
25. A block slides down and inclined of 30° with an acceleration of $g/4$. Find the kinetic friction coefficient.
 a. $\frac{1}{2\sqrt{3}}$ b. $\frac{1}{4\sqrt{3}}$ c. $\frac{1}{5\sqrt{3}}$ d. $\frac{1}{6\sqrt{3}}$
26. A small block of mass 100 g moves with uniform speed in a horizontal circular groove, with vertical side walls of radius 25 cm. If the block takes 2.0 s to complete one round, then find the normal contact force by the side wall of the groove.
 a. 1 N b. 0.25 N
 c. 0.4 N d. 2 N
27. A body dropped from a height H reaches the ground with a speed of $1.2\sqrt{gH}$. Calculate the work done by air friction.
 a. $-0.28 mgh$ b. $0.28 mgh$
 c. $0.56 mgh$ d. $-0.56 mgh$
28. A body of mass 2.5 kg is subjected to the force as shown in figure. Find the acceleration of the centre of mass.

- a. 2 m/s^2 b. 1.6 m/s^2
 c. 3.2 m/s^2 d. None of these
29. A parallel beam of green light of wavelength 546 nm passes through a slit of width 0.40 mm. the transmitted light is collected on a screen 40 cm away. What will be the distance between two first order minima?
 a. 2.6 mm b. 1.8 mm
 c. 1.7 mm d. 1.1 mm

30. A 50 cm long wire of mass 20 g supports a mass of 1.6 kg as shown in figure. Find the fundamental frequency of the position of the string between the wall and the pulley.

- a. 25 Hz b. 50 Hz
c. 75 Hz d. 100 Hz
31. A cylinder is released from rest from the top of an incline of inclination θ and length l . If the cylinder rolls without slipping, then what will be its speed when it reaches the bottom?
- a. $\sqrt{\frac{2}{3}gl \sin \theta}$ b. $\sqrt{\frac{4}{3}gl \sin \theta}$
c. $\sqrt{\frac{6}{7}gl \sin \theta}$ d. None of these
32. The gravitational field in a region is g given by $\mathbf{F} = 10 \text{ N}(\hat{i} + \hat{j}) \text{ kg}^{-1}$. What will be work done by an external agent to slowly shift a particle of mass 2 kg from the point (0,0), to a point (5, 4) ?
- a. -180 J b. +100 J
c. +180 J d. -100 J
33. The liquids shown in figure in the two arms are mercury (specific gravity = 13.6) and water. If the difference of heights of the mercury columns is 2 cm. What will be the height h of the water column?

- a. 27 cm b. 30 cm c. 40 cm d. 47 cm
34. A water drop of radius 10^{-2} m is broken into 1000 equal droplets. Calculate the gain in surface energy. Surface tension of water is 0.075 N/m .
- a. $8.5 \times 10^{-4} \text{ J}$ b. $9.5 \times 10^{-4} \text{ J}$
c. $10 \times 10^{-4} \text{ J}$ d. None of these

35. The speed of transverse wave giving on a wire having a length 50 cm and mass 5.0 g is 80 m/s. The area of cross-section of the wire is 1.0 mm^2 and its Young's modulus is $16 \times 10^{11} \text{ N/m}^2$. Find the extension of the wire over its natural length.
- a. 0.04 mm b. 0.02 mm
c. 0.06 mm d. 1 mm
36. A sound wave of wavelength 40 cm travels in air. If the difference between the maximum and minimum pressures at a given point is $1 \times 10^{-3} \text{ N/m}^2$. What will be the amplitude of vibration of the particle of the medium, the bulk modulus of air is $1.4 \times 10^{-10} \text{ N/m}^2$?
- a. $4.4 \times 10^{-10} \text{ m}$
b. $3.3 \times 10^{-10} \text{ m}$
c. $1.1 \times 10^{-10} \text{ m}$
d. $2.2 \times 10^{-10} \text{ m}$
37. A particle of mass 40 g executes a simple harmonic motion of amplitude 2.0 cm. If the time period is 0.20 s, find the total mechanical energy of the system.
- a. $7.9 \times 10^{-3} \text{ J}$
b. $8.9 \times 10^{-3} \text{ J}$
c. $9.9 \times 10^{-3} \text{ J}$
d. $6.9 \times 10^{-3} \text{ J}$
38. The sound level at a point is increased by 30 dB. By what factor is the pressure amplitude increased?
- a. 30 b. 25
c. 32 d. 27
39. White light is mixture of light of wavelength between 400 nm to 700 nm. If this light goes through water ($\mu = 1.33$) what will be the limits of the wavelength there?
- a. (300 to 525) nm
b. (600 to 700) nm
c. (800 to 1000) nm
d. (1200 to 1400) nm
40. What will be the moment of inertia of a solid cylinder of mass M and radius R about a line parallel to the axis of the cylinder and on the surface of the cylinder?
- a. $\frac{7}{2} MR^3$ b. $\frac{5}{2} MR^2$
c. $\frac{7}{5} MR^2$ d. $\frac{2}{3} MR^2$

PART II

Chemistry

41. In which of the following pairs, the two species are not iso-structural?
- CO_3^{2-} and NO_3^-
 - PCl_4^+ and SiCl_4
 - PF_3 and BrF_5
 - AlF_6^{3-} and SF_6
42. Which of the following statements regarding dacron is correct?
- Dacron is an example of polyester.
 - In the manufacturing of dacron zinc acetate antimonytrioxide used as a catalyst.
 - Dacron fibres is increases resistant.
 - It is a polymer of natural rubber.
- Only IV
 - Both IV and I
 - I, II and III
 - None of these
43. Bombardment of aluminium by α -particle leads to its artificial disintegration in two ways as shown. Products X, Y and Z respectively are
- $$\begin{array}{ccc}
 {}_{13}^{27}\text{Al} + {}_2^4\text{He} & \xrightarrow{\text{(ii)}} & {}_{15}^{30}\text{P} + \text{Y} \\
 \downarrow \text{(i)} & & \downarrow \\
 {}_{14}^{30}\text{Si} + \text{X} & & {}_{14}^{30}\text{Si} + \text{Z}
 \end{array}$$
- proton, neutron, positron
 - neutron, proton, positron
 - proton, positron, neutron
 - positron, neutron, proton
44. Predict Kroll process in the following reaction,
- $\text{TiCl}_4(g) + 2\text{Mg} \longrightarrow \text{Ti}(s) + 2\text{MgCl}_2(l)$
 - $\text{Fe}_2\text{O}_3 + 3\text{C} \longrightarrow 3\text{CO} + 2\text{Fe}$
 - $\text{Al}_2\text{O}_3 \cdot x\text{H}_2\text{O}(s) \xrightarrow{1470\text{K}} \text{Al}_2\text{O}_3 + x\text{H}_2\text{O}(g)$
 - $\text{Cr}_2\text{O}_3 + 2\text{Al} \longrightarrow 2\text{Cr} + \text{Al}_2\text{O}_3$
45. The complementary strand of DNA for the given single stranded DNA sequence
 $5'-\text{A}-\text{T}-\text{C}-\text{A}-\text{T}-\text{G}-\text{C}-3'$ is
- $5'-\text{A}-\text{T}-\text{C}-\text{A}-\text{T}-\text{G}-\text{C}-3'$
 - $5'-\text{T}-\text{A}-\text{G}-\text{T}-\text{A}-\text{C}-\text{G}-3'$
 - $5'-\text{G}-\text{C}-\text{A}-\text{T}-\text{G}-\text{A}-\text{T}-3'$
 - $5'-\text{C}-\text{G}-\text{T}-\text{A}-\text{C}-\text{T}-\text{A}-3'$
46. The IUPAC name of the compound  is
- 2, 8-dimethyl-3,6-decadiene
 - 2, 2-dimethylpropane
 - 2, 4, 6, 8 octatetraene
 - 1, 3, 5, 7 octatetraene
47. Which of the following dissolves in water but does not give any oxyacid solution?
- SO_2
 - OF_2
 - SCl_4
 - SO_3
48. Heat capacity (C_p) is an extensive property but specific heat (C) is an intensive property. The relation between C_p and C for 1 mole of water is
- $+5.18 \text{ JK}^{-1}$
 - -5.18 JK^{-1}
 - -75.3 JK^{-1}
 - $+75.3 \text{ JK}^{-1}$
49. Select the correct statement regarding the compound.
- 
- The IUPAC name of this compound is 1, 3-epoxy propane.
 - The functional group of this compound is ether.
 - Root word in the IUPAC name of this compound is prop.
 - This is a saturated open chain structure.
- Only I
 - I, II and III
 - Only IV
 - IV and III
50. Aniline does not undergo Friedel-Crafts reaction due to
- lone pair nitrogen atoms activate the benzene ring
 - salt formation with aluminium chloride
 - meta derivative formation
 - None of the above
51. The edges length of a face-centred cubic cell of an ionic substance is 508 pm. If the radius of the cation is 110 pm, the radius of the anion is
- 618 pm
 - 144 pm
 - 288 pm
 - 398 pm
52. What is the sweeteners value of the structure in comparison to cane sugar?
- 
- 100
 - 500
 - 200
 - 550
53. Interstitial compounds are formed when small atoms are.....
- trapped inside the crystal lattice of metals
 - chemically very reactive
 - decomposes in inner orbitals
 - progressively filled

54. $\text{C}_2\text{H}_5\text{NH}_2$ I $\text{C}_6\text{H}_5\text{NHCH}_3$ II
 $(\text{C}_2\text{H}_5)_2\text{NH}$ and $\text{C}_6\text{H}_5\text{NH}_2$ III

Above the following which forms H-bonding faster in aqueous medium?

- a. Only I
 b. Only III
 c. I, II and III
 d. None of these
55. Identify the reaction upto P and product Q.
-
- a. Sandmeyer reaction, benzoic acid
 b. Fittig reaction, benzoidal chloride
 c. Friedel-Craft's reaction benzaldehyde
 d. Reimer-Tiemann reaction, benzaldehyde
56. Now a days, the pesticide industry has shifted its attention to herbicide such as.....
- a. sodium chlorate
 b. sodium arsenite
 c. Both (a) and (b)
 d. aldrin
57. Ampicillin and amoxycillin are synthetic modification of
- a. amino glycosides
 b. ofloxacin
 c. tetracycline
 d. penicillins
58. A sample of wustite is $\text{Fe}_{0.93}\text{O}_{1.00}$. The percentage of iron present in form of Fe (III) is.....
- a. 15.05%
 b. 17.5%
 c. 19.05%
 d. 8%
59. An alcohol A is treated with "Lucas reagent" to predict whether the alcohol is primary, secondary or tertiary. Which reacts fastest?
- a. Tertiary alcohol
 b. Secondary alcohol
 c. Primary alcohol
 d. None of the above
60. Fullerenes are the only pure form of carbon because
- a. layered structured held by van der Waals' forces
 b. they have smooth structure without having 'dangling' bonds
 c. it has 3-dimensional structure
 d. extremely hard refractory solid of high melting point

61. For a sparingly soluble salt A_pB_q solubility product (L_S) with its solubility (S) is best represented by

a. $L_S = S^{p+q} \cdot p^p \cdot q^q$
 b. $L_S = S^{p+q} \cdot p^q \cdot q^p$
 c. $L_S = S^{pq} \cdot p^p \cdot q^q$
 d. $L_S = S^{pq} \cdot (pq)^{p+q}$

62. Sodium has body-centred cubic structure having nearest neighbour distance 365.9 pm. The density.....

a. 2 g cm^3
 b. 1.01 g cm^3
 c. 5 g cm^3
 d. 3.02 g cm^3

63. RNA contains four bases, the first three bases are same as in DNA but the fourth one is.....

a. adenine
 b. cytosine
 c. thymine
 d. uracil

64. Identify A in the reaction,

a. $\text{C}_6\text{H}_5\text{CHO}$
 b. $\text{C}_6\text{H}_5\text{CH}_2\text{CH}_3$
 c. CH_3COCl
 d. $\text{C}_6\text{H}_5\text{COCH}_3$

65. Dihydrogen is used in the manufacturing of
- a. antiseptic
 b. disinfectant
 c. vanaspati fat
 d. antigens

66. Thyroxine produced in the thyroid gland is an iodinated derivatives of

a. acetic acid
 b. lactic acid
 c. amino acid
 d. picric acid

67. $[\text{Fe}(\text{CO})_4(\text{PPh}_3)_2]^{2+}$ I $[\text{Co}(\text{CO})_4(\text{PhO})_2]^{2+}$ II
 $[\text{V}(\text{CO})_4(\text{PF}_3)_2]^{2+}$ III $[\text{Mn}(\text{CO})_4(\text{PCl}_3)_2]^{2+}$ IV

Arrange the following in the decreasing order of C—O bond length.

a. I > II > III > IV
 b. III > II > I > IV
 c. III > IV > II > I
 d. II > I > III > IV

68. Dehydrobromination ($-\text{HBr}$) of the following in increasing order is

a. I < II < III
 b. III < II < I
 c. II = III < I
 d. III < I < II

69. If a thin slice of sugar beet is placed in concentrated solution of NaCl, then
- sugar beet will lose water from its cells
 - sugar beet will absorb water from solution
 - sugar beet will neither absorb nor lose water
 - sugar beet will dissolve in solution

70. 0.02 molar solution of NaCl having degree of dissociation of 90% at 27°C has osmotic pressure equal to

- 0.94 bar
- 9.4 bar
- 0.94 bar
- 9.4×10^{-4} bar

71. Which of the following statements is correct?

- $(n-1)d$ subshell has lower energy than ns subshell
- $(n-1)d$ subshell has higher energy than ns subshell
- $(n+1)d$ subshell has lower energy than nf subshell
- nf subshell has lower energy than $(n+s)s$ subshell

72. If $a = \frac{h}{4\pi^2 me^2}$, then the correct expression for the calculation of the circumference of the first orbit of hydrogen atom is

- $\sqrt{4} \pi h a$
- $2\pi r$
- $\sqrt{4h^2 \pi a}$
- (a) and (c) are correct

73. By the addition of 0.035 g of starch the coagulation of 10 cm³ of gold sol is completely prevented. The gold number of starch is

- 0.00035
- 0.35
- 55
- 35

74. In chain growth polymerisation addition takes place head-to-tail when monomer is

- $\text{CH}_2=\text{CH}-\text{C}_6\text{H}_5$
- $\text{CH}_2=\text{CH}-\text{CH}=\text{CH}_2$
- $\text{CH}_2=\text{C}(\text{CH}_3)-\text{C}(\text{OCH}_3)=\text{CH}_2$
- $\text{CH}_2=\text{CH}-\text{C}\equiv\text{N}$

75. The major product(s) of the following reaction is (are)

76. ΔU° of combustion of methane is $-x \text{ kJ mol}^{-1}$. The value of ΔH° is

- $= \Delta U^\circ$
- $> \Delta U^\circ$
- $< \Delta U^\circ$
- Equal to zero

77. At 500 K, equilibrium constant K_C for the following reaction is 5.

What would be the equilibrium constant K_C for the reaction?

- 0.04
- 0.4
- 25
- 2.5

78. The reaction,

- is an example of
- oxidation reaction
 - reduction reaction
 - disproportionation reaction
 - decomposition reaction

79. Gaseous nitric acid has the structure

- planar
- square planar
- pyramidal
- trigonal bipyramidal

80. *p*-nitrophenol is less volatile due to

- intermolecular hydrogen bonding
- intramolecular hydrogen bonding
- picric acid
- van der Waals' force

PART III

a. English Proficiency

Directions (Q. Nos. 81 to 84) *In the sentences that are given below, a part of it has been underlined. That part may be improved by one of the options. The part with the best improving ability will be your answer. In case, no improvement is needed then "No improvement" is your answer.*

81. If he would have tried, he would have succeeded.
 a. is tried b. was tried
 c. had tried d. No improvement
82. I will not go to school, if it shall rain tomorrow.
 a. it would rain tomorrow b. it will rain tomorrow
 c. it rains tomorrow d. No improvement
83. Why the dinosaurs died out is not known.
 a. it is not known b. the reason is not known
 c. that is not known d. No improvement
84. He is quite well now, except a slight cold.
 a. except with a slight cold b. excepting a slight cold
 c. except for a slight cold d. No improvement

Directions (Q. Nos. 85 to 88) *In the sentences given below there is an error in one of the parts which will be your answer. If there is no error then "No error" is your answer.*

85. The table's wood (a)/ is infested with mite (b)/ and I am likely to dispose it off. (c)/ No error (d)
86. The morale of the army (a)/ was high because the news (b)/ coming from the front are very encouraging. (c)/ No error (d)
87. I can't come to you now (a)/ because a lot of works (b)/ remains to be done. (c)/ No error (d)
88. A farmer was leading oxes (a)/ to his field for ploughing (b)/ early in the morning. (c)/ No error (d)

Directions (Q. Nos. 89 to 95) *Read the passage carefully and then choose the most suitable option from the given ones.*

There are eccentric people who enjoy saving money for no other reason than the pleasure of saving money. It is a passion like drinking and a hobby like collecting of China. Does it usually begin with a money-box ? Imagine a painter drawing the miser 's progress in a number of scenes, with the first scene showing a benevolent grandfather holding out a harmless looking tin money-box to an infant scarcely able to walk .

The gift should always be accompanied by a box of tools. As a young man the infant has grown into a miser. By the age of forty he has substantial bank account. But he persuades himself that he is so poor that he never goes to the theater, never invites a friend to dinner. By sixty, he is a rich man and is convinced that he is all but a pauper.

89. Some people enjoy saving money because
 a. they are able to live a happy life
 b. saving is a passion for them
 c. they are able to enjoy the pleasures of life
 d. they can entertain others
90. If a money-box is given to a child, what should accompany it?
 a. Tips on the advantages of saving money
 b. Guidelines to preserve it
 c. instructions on when and how to open it
 d. A box of tools to open it
91. A miserly man of forty does not go to the theatre because
 a. he has no liking for plays
 b. he does not want to waste his valuable time
 c. he persuades himself that he is very poor
 d. he is frightened by the darkness of the theatre hall

Directions (Q. Nos. 92 and 93) *Find the synonym of the word given in capital letters.*

92. The vehicle slowed down as they moved up the GRADIENT.
 a. Road with sharp bends
 b. Bumpy, uneven path
 c. Slope or incline
 d. Mountainous area
93. It is DEPLORABLE that millions of people in India are below the poverty line.
 a. Hateful b. Regrettable
 c. Undesirable d. Unpleasant

Directions (Q. Nos. 94 and 95) *Rearrange the jumbled part of the sentence and then choose the correct option.*

94. He was a man
 P : even if he had to starve
 Q : who would not beg
 R : borrow or steal
 S : from anyone
 The proper sequence should be
 a. PQRS b. PRQS
 c. QRSP d. QPRS
95. P : in the progress of
 Q : universities play a crucial role
 R : our civilisation
 S : in the present age
 The proper sequence should be
 a. SQPR b. QRSP
 c. QRPS d. SQRP

b. Logical Reasoning

96. If STUDENT is coded as RUTEDOS, which word would be coded as RDGPKBQ ?

- a. SHERBET b. SHINGLE
c. SHACKLE d. SCHOLAR

97. Find the next term in the series.

1, 2, 2, 4, 8, ?

- a. 8 b. 9 c. 32 d. 16

98. Which of the following figures represents village, district, state ?

99. Which of the following diagrams represents humans, females and girls ?

100. From amongst the four alternative figures (a), (b), (c) and (d), select the one showing the unfolded position of Z.

101. Examine the following figure.

Which one of the following figures has the above figure embedded in it ?

102. 'Flower' is related to 'Petal' in the same way as 'Book' is related to

- a. Pages b. Content
c. Author d. Library

103. Find the odd one out.

- a. Cheese b. Wine c. Milk d. Curd

104. Find the odd one out.

- a. Moon b. Planet c. Sky d. Star

105. Find the odd one out.

- a. 42-4 b. 36-6 c. 32-2 d. 15-5

PART IV

Mathematics

106. If $\int f(x) dx = 2\{f(x)\}^3 + C$, then $f(x)$ is

- a. $\frac{x}{2}$ b. x^3
c. $\frac{1}{\sqrt{x}}$ d. $\sqrt{\frac{x}{3}}$

107. The interval in which $2x^3 + 5$ increase less rapidly than $9x^2 - 12x$, is

- a. $(-\infty, 1)$ b. $(1, 2)$
c. $(2, \infty)$ d. None of these

108. The number of real roots of the equation $e^{x-1} + x - 2 = 0$, is

- a. 1 b. 2
c. 3 d. 4

109. The abscissae of the point on the curve $xy = (a + x)^2$, the normal at which cuts off numerically equal intercepts from the axes of coordinates, is

- a. $\frac{a}{\sqrt{2}}$ b. a c. $\sqrt{2}a$ d. $\frac{-a}{2}$

110. If $4x + 3|y| = 5y$, then y as a function of x is

- a. differentiable at $x = 0$ b. continuous at $x = 0$
c. $\frac{dy}{dx} = 2$ for all x d. None of these

111. If $a \cdot \lim_{x \rightarrow 1} x^{\frac{1}{1-x}} + b = e^{-1}$; $a \geq 1, b \geq 0$, then

- a. $a = 1, b = e^{-1}$ b. $a = 2, b = e^{-1}$
c. $a = -1, b = e^{-1}$ d. $a = 1, b = 0$

112. If $e^x + e^{f(x)} = e$, then the domain of definition of $f(x)$ is
 a. $(-\infty, 1)$ b. $(-\infty, 0)$ c. $(1, \infty)$ d. None
113. A coin is tossed n times. The probability that head will turn up an odd number of times, is
 a. $\frac{1}{2}$ b. $\frac{x+1}{2x}$ c. $\frac{x-1}{2x}$ d. $\frac{2^{x-1}-1}{2^x}$
114. For $n \in N$, $3^{2n+2} - 2^3 n - 9$ is divisible by
 a. 3 b. 9 c. 64 d. 81
115. If p, q, r have truth values T, F, T respectively, then which of the following is true?
 a. $(p \rightarrow q) \wedge r$ b. $(p \rightarrow q) \wedge \sim r$
 c. $(p \wedge q) \wedge (p \vee r)$ d. $q \rightarrow (p \wedge r)$
116. Let $A = \{x \in R : x \leq 1\}$ and $f: A \rightarrow A$ be defined as $f(x) = x(2-x)$. Then, $f^{-1}(x)$ is
 a. $1 + \sqrt{1-x}$ b. $1 - \sqrt{1-x}$ c. $\sqrt{1-x}$ d. $1 \pm \sqrt{1-x}$
117. The relation $R = \{(1,3), (3,5)\}$ is defined on the set with minimum number of elements of natural numbers. The minimum number of elements to be included in R , so that R is an equivalence relation, is
 a. 5 b. 6 c. 9 d. 8
118. If S is the set of squares and R is the set of rectangles, then $(S \cup R) - (S \cap R)$ is
 a. S
 b. R
 c. set of squares but not rectangles
 d. set of rectangles but not squares
119. If x_1 and x_2 are the roots of the equation $e^2 \cdot x^{\ln x} = x^3$ with $x_1 > x_2$, then
 a. $x_1 = 2x_2$ b. $x_1 = x_2^2$ c. $2x_1 = x_2^2$ d. $x_1^2 = x_2^3$
120. If $2 \sec^2 A - \sec^4 A - 2 \operatorname{cosec}^2 A + \operatorname{cosec}^4 A = 15/4$, then $\tan A$ is equal to
 a. $\pm \frac{1}{\sqrt{2}}$ b. $\pm \frac{1}{2}$ c. ± 2 d. $\pm \frac{1}{2}\sqrt{2}$
121. The range of R for which the inequality $k \cos^2 x - k \cos x + 1 \geq 0, \forall x \in (-\infty, \infty)$, is
 a. $k < -\frac{1}{2}$ b. $-\frac{1}{2} \leq k \leq 4$ c. $k > 4$ d. $\frac{1}{2} \leq k \leq 5$
122. The number of ordered pairs which satisfy the equation $x^2 + 2x \sin(xy) + 1 = 0, y \in [0, 2\pi]$, are
 a. 1 b. 2 c. 3 d. 0
123. The value of $2 \tan^{-1} \left[\sqrt{\frac{a-b}{a+b}} \tan \frac{\theta}{2} \right]$ is
 a. $\cos^{-1} \left(\frac{a \cos \theta + b}{a + b \cos \theta} \right)$ b. $\cos^{-1} \left(\frac{a + b \cos \theta}{a \cos \theta + b} \right)$
 c. $\cos^{-1} \left(\frac{a \cos \theta}{a + b \cos \theta} \right)$ d. $\cos^{-1} \left(\frac{b \cos \theta}{a \cos \theta + b} \right)$
124. In $\triangle ABC$, medians AD and CE are drawn. If $AD = 5, \angle DAC = \pi/8$ and $\angle ACE = \pi/4$, then the area of $\triangle ABC$ (in sq units) is equal to
 a. $\frac{25}{9}$ b. $\frac{10}{3}$ c. $\frac{25}{18}$ d. $\frac{25}{3}$
125. The locus of the foot of the perpendicular drawn from either focus on a variable tangent to the hyperbola $16y^2 - 9x^2 = 1$, is
 a. $x^2 + y^2 = 9$ b. $x^2 + y^2 = 1/9$
 c. $x^2 + y^2 = 7/144$ d. $x^2 + y^2 = 1/16$
126. The length of the sides of the square which can be made by four perpendicular tangents to the ellipse $\frac{x^2}{7} + \frac{2y^2}{11} = 1$, is
 a. 10 units b. 8 units c. 6 units d. 5 units
127. The set of points on the axis of the parabola $(x-1)^2 = 8(y+2)$ from where three distinct normals can be drawn to the parabola, is the set (h, k) of points satisfying
 a. $h > 2$ b. $h > 1$
 c. $k > 2$ d. None of these
128. If the chords of contact of tangents from three points A, B and C to the circle $x^2 + y^2 = a^2$ are concurrent, then A, B and C will
 a. be concyclic
 b. be collinear
 c. form the vertices of triangle
 d. None of the above
129. The condition that one of the straight lines given by the equation $ax^2 + 2hxy + by^2 = 0$ may coincide with one of those given by the equation $a'x^2 + 2h'xy + b'y^2 = 0$, is
 a. $(ab' - a'b)^2 = 4(ha' - h'a)(bh' - b'h)$
 b. $(ab' - a'b)^2 = (ha' - h'a)(bh' - b'h)$
 c. $(ha' - h'a)^2 = 4(ab' - a'b)(bh' - b'h)$
 d. $(bh' - b'h)^2 = 4(ab' - a'b)(ha' - h'a)$
130. If $P(1+t\sqrt{2}, 2+t\sqrt{2})$ is any point on the line, then the range of the value of t for which the point P lies between the parallel lines $x + 2y = 1$ and $2x + 4y = 15$ is
 a. $-4\sqrt{2}/3 < t < 5\sqrt{2}/3$ b. $0 < t < 5\sqrt{2}/6$
 c. $4\sqrt{2} < t < 0$ d. None of these
131. One Indian and four American men and their wives are to be seated randomly around a circular table. Then, the conditional probability that the Indian man is seated adjacent to his wife, given that each American man is seated adjacent to his wife, is
 a. $1/2$ b. $1/3$
 c. $2/5$ d. $1/5$

132. Let p be an odd prime number and T_p be the following set of 2×2 matrices :

$$T_p = \left\{ A = \begin{bmatrix} a & b \\ c & a \end{bmatrix} : a, b, c \in \{0, 1, \dots, p-1\} \right\}$$

The number of A in T_p such that A is either symmetric or skew-symmetric or both and $\det(A)$ is divisible by p , is

- a. $(p-1)^2$ b. $2(p-1)$ c. $(p-1)^2 + 1$ d. $2p-1$
133. Let a, b, c be the real numbers. Then, the system of equations in $\frac{x^2}{a^2} + \frac{y^2}{b^2} - \frac{z^2}{c^2} = 1, \frac{x^2}{a^2} - \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1$ and $-\frac{x^2}{a^2} + \frac{y^2}{b^2} + \frac{z^2}{c^2} = 1$, has
- a. no solution b. unique solution
c. infinitely many solutions d. finitely many solutions
134. If the coefficients of three consecutive terms of $(1+x)^{n+5}$ are in the ratio 5:10:14, then n equals
- a. 3 b. 4 c. 5 d. 6
135. Consider the set of eight vectors $\mathbf{V} = \{a\hat{i} + b\hat{j} + c\hat{k}; a, b, c \in \{-1, 1\}\}$. If three non-coplanar vectors can be chosen from $\mathbf{V}$ in 2^p ways, then p is
- a. 4 b. 5 c. 6 d. 7
136. If $\alpha \in \left(0, \frac{\pi}{2}\right)$, then $\sqrt{x^2 + x} + \frac{\tan^2 \alpha}{\sqrt{x^2 + x}}$ is always greater than or equal to
- a. $2 \tan \alpha$ b. 1 c. 2 d. $\sec^2 \alpha$
137. Let complex numbers α and $\frac{1}{\alpha}$ lie on circles $(x-x_0)^2 + (y-y_0)^2 = r^2$ and $(x-x_0)^2 + (y-y_0)^2 = 4r^2$, respectively. If $z_0 = x_0 + iy_0$ satisfies the equation $2|z_0|^2 = r^2 + 2$, then $|\alpha|$ equals
- a. $1/\sqrt{2}$ b. $1/2$ c. $1/\sqrt{7}$ d. $1/3$
138. Let a, b, c be real numbers and $a \neq 0$. If α is the root of $a^2x^2 + bx + c = 0$ and β is the root of $a^2x^2 - bx - c = 0$; $0 < \alpha < \beta$, then the equation $a^2x^2 + 2bx + 2c = 0$ has a root γ that always satisfies
- a. $\gamma = \frac{\alpha + \beta}{2}$ b. $\gamma = \alpha + \frac{\beta}{2}$ c. $\gamma = \alpha$ d. $\alpha < \gamma < \beta$
139. If $a^2 + b^2 + c^2 = 1$, then $ab + bc + ca$ lies in the interval
- a. $\left[\frac{1}{2}, 2\right]$ b. $[-1, 2]$ c. $\left[-\frac{1}{2}, 1\right]$ d. $\left[-1, \frac{1}{2}\right]$
140. If $\mathbf{a}, \mathbf{b}, \mathbf{c}$ are non-coplanar vectors, then $\frac{\mathbf{a} \cdot (\mathbf{b} \times \mathbf{c})}{(\mathbf{c} \times \mathbf{a}) \cdot \mathbf{b}} + \frac{\mathbf{b} \cdot (\mathbf{a} \times \mathbf{c})}{\mathbf{c} \cdot (\mathbf{a} \times \mathbf{b})}$ is equal to
- a. 0 b. 1
c. 2 d. None of these

141. Let $\mathbf{a} = x\hat{i} + x^2\hat{j} + 2\hat{k}$, $\mathbf{b} = -3\hat{i} + \hat{j} + \hat{k}$ and the $\mathbf{c} = (3x+11)\hat{i} + (x-9)\hat{j} - 3\hat{k}$ be three vectors. Then, the angle between $\mathbf{a}$ and $\mathbf{b}$ is acute angle and between $\mathbf{c}$ and $\mathbf{a}$ is obtuse, if x lies in

a. $(-\infty, 1) \cup (2, 3)$ b. $(-\infty, 1]$
c. $[2, 3]$ d. None of these

142. The mean of the numbers $a, b, 8, 5, 10$ is 6 and the variance is 6.80. Then, which one of the following gives possible values of a and b ?

a. $a = 1, b = 6$ b. $a = 3, b = 4$ c. $a = 0, b = 7$ d. $a = 5, b = 2$

143. The degree of the differential equation $x = 1 + \frac{dy}{dx} + \frac{1}{2!} \left(\frac{dy}{dx}\right)^2 + \frac{1}{3!} \left(\frac{dy}{dx}\right)^3 + \dots$, is

a. 3 b. 1
c. Not defined d. None of these

144. The area bounded by $y = xe^{|x|}$ and lines $|x| = 1, y = 0$, is

a. 4 sq units b. 6 sq units c. 1 sq units d. 2 sq units

145. If $\int_{\pi/2}^{\theta} \sin x \, dx = \sin 2\theta$, then the value of θ satisfying $0 < \theta < \pi$, is

a. $3\pi/2$ b. $\pi/6$ c. $5\pi/6$ d. $\pi/2$

146. Let $S_n = \sum_{k=1}^{4n} (-1)^{\frac{k(k+1)}{2}} k^2$. Then, S_n can take value(s)

a. 1056 b. 1088 c. 1120 d. 1333

147. If the function $f(x) = (4 \sin^2 x - 1)^n (x^2 - x + 1)$, $n \in \mathbb{N}$, has a local maximum at $x = \pi/6$, then n

a. can be any odd natural number
b. can only be an odd prime number
c. can be any even natural number
d. can only be a multiple of 4

148. In three dimensional space, the equation $x^2 - x - 2 = 0$ represents

a. a pair of straight lines
b. a set containing two distinct points
c. a pair of parallel planes
d. None of the above

149. If the sum of the slopes of the normal from a point P to the hyperbola $xy = c^2$ is equal to λ ; $\lambda \in \mathbb{R}^+$, then the locus of point P is

a. $x^2 = \lambda c^2$ b. $y^2 = \lambda c^2$ c. $xy = \lambda c^2$ d. None

150. Consider the lines $L_1: \frac{x+1}{3} = \frac{y+2}{1} = \frac{z+1}{2}$ and

$L_2: \frac{x-2}{1} = \frac{y+2}{2} = \frac{z-3}{3}$. The unit vector perpendicular to both L_1 and L_2 is

a. $\frac{1}{\sqrt{99}}(-\hat{i} + 7\hat{j} + 5\hat{k})$ b. $\frac{1}{5\sqrt{3}}(-\hat{i} - 7\hat{j} + 5\hat{k})$
c. $\frac{1}{5\sqrt{3}}(-\hat{i} + 7\hat{j} + 5\hat{k})$ d. $\frac{1}{\sqrt{99}}(7\hat{i} - 7\hat{j} - \hat{k})$

Solved Paper 2017

BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as given below.
Part I Physics
Part II Chemistry
Part III (a) English Proficiency
(b) Logical Reasoning
Part IV Mathematics
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

1-40
41-80
81-95
96-105
106-150

PART I

Physics

- If temperature of a black body increases from 300 K to 900 K, then the rate of energy radiation increases by
a. 81 b. 3 c. 9 d. 2
- A whistle of frequency 500 Hz tied to the end of a string of length 1.2 m revolves at 400 rev/min. A listener standing some distance away in the plane of rotation of whistle hears frequencies in the range.
(Speed of sound = 340 m/s)
a. 436 to 574 b. 426 to 586
c. 426 to 574 d. 436 to 586
- The focal length of a thin convex lens for red and blue rays are 100 cm and 96.8 cm respectively. Then, the dispersive power of the material of the lens is
a. 0.968 b. 0.98
c. 0.0325 d. 0.325
- Two metal plates having a potential difference of 800 V are 2 cm apart. It is found that a particle of mass 1.96×10^{-15} kg remains suspended in the region between the plates. The charge on the particle must be (e = elementary charge).
a. $2e$ b. $3e$
c. $6e$ d. $8e$
- At what angle θ to the horizontal should an object is projected so that the maximum height reached is equal to the horizontal range?
a. $\tan^{-1}(2)$ b. $\tan^{-1}(4)$
c. $\tan^{-1}\left(\frac{2}{3}\right)$ d. $\tan^{-1}(3)$
- A body of mass 1 kg is executing simple harmonic motion. Its displacement y (cm) at t seconds is given by $y = 6 \sin\left(100t + \frac{\pi}{4}\right)$.
Its maximum kinetic energy is
a. 6 J b. 18 J
c. 24 J d. 36 J
- A positive charge q is projected in magnetic field of width $\frac{mv}{\sqrt{2}qB}$ with velocity v . Then, the time taken by charged particle to emerge from the magnetic field is
a. $\frac{m}{\sqrt{2}qB}$ b. $\frac{\pi m}{4qB}$
c. $\frac{\pi m}{2qB}$ d. $\frac{\pi m}{\sqrt{2} \cdot qB}$

2 SELF STUDY GUIDE BITSAT

8. In Young's double slit experiment, the slits are 2 mm apart and are illuminated by photons of two wavelengths $\lambda_1 = 12000 \text{ \AA}$ and $\lambda_2 = 10000 \text{ \AA}$. At what minimum distance from the common central bright fringe on the screen 2m from the slit will a bright fringe from one interference pattern coincide with a bright fringe from the other?
- a. 8 mm b. 6 mm c. 4 mm d. 3 mm
9. Two blocks *A* and *B* are placed one over the other on a smooth horizontal surface. The maximum horizontal force that can be applied on lower block *B*, so that *A* and *B* move without separation is 49 N.

The coefficient of friction between *A* and *B* is

- a. 0.2 b. 0.3
c. 0.5 d. 0.8
10. An aeroplane is flying in a horizontal direction with a velocity u and at a height of 2000 m. When it is vertically below a point *A* on the ground a food packet is released from it. The packet strikes the ground at point *B*. If $AB = 3 \text{ km}$ and $g = 10 \text{ m/s}^2$, then the value of u is
- a. 54 km/h b. 540 km/h
c. 150 km/h d. 300 km/h
11. A conducting circular loop is placed in a uniform magnetic field, $B = 0.025 \text{ T}$ with its plane perpendicular to the loop. The radius of the loop is made to shrink at a constant rate of 1 mm/s. The induced emf when the radius is 2 cm, is
- a. $2 \pi \mu\text{V}$ b. $\pi \mu\text{V}$
c. $\frac{\pi}{2} \mu\text{V}$ d. $2 \mu\text{V}$
12. A mild steel wire of length $2L$ and cross-sectional area A is stretched, well within the elastic limit, horizontally between two pillars as shown in figure. A mass m is suspended from the mid-point of the wire strain in the wire is

- a. $\frac{x^2}{2L^2}$ b. $\frac{x}{L}$
c. $\frac{x^2}{L}$ d. $\frac{x^2}{2L}$
13. The resistance of a wire at 20°C is 20Ω and 500°C is 60Ω . At which temperature, its resistance will be 25Ω ?
- a. 50°C b. 60°C
c. 70°C d. 80°C

14. The de-Broglie wavelength of a proton (charge $= 1.6 \times 10^{-19} \text{ C}$, $m = 1.6 \times 10^{-27} \text{ kg}$) accelerated through a potential difference of 1 kV is
- a. $600 \text{ \AA}$ b. $0.9 \times 10^{-12} \text{ m}$
c. $7 \text{ \AA}$ d. 0.9 nm
15. An ice-berg of density 900 kgm^{-3} is floating in water of density 1000 kgm^{-3} . The percentage of volume of ice-berg outside the water is
- a. 20% b. 35%
c. 10% d. 11%
16. The total energy of an electron in the first excited state of hydrogen is about -3.4 eV . Its kinetic energy in this state is
- a. -3.4 eV b. -6.8 eV
c. 6.8 eV d. 3.4 eV
17. A common emitter amplifier has a voltage gain of 50, an input impedance of 100Ω and an output impedance of 200Ω . The power gain of the amplifier is
- a. 500 b. 1000
c. 1250 d. 50
18. The horizontal range and maximum height attained by a projectile are R and H respectively. If a constant horizontal acceleration $a = \frac{g}{4}$ is imparted to the projectile due to wind, then its horizontal range and maximum height will be
- a. $(R + H), \frac{H}{2}$
b. $\left(R + \frac{H}{2}\right), 2H$
c. $(R + 2H), H$
d. $(R + H), H$
19. A balloon is filled at 27°C and 1 atm pressure by 500 m^3 He. At -3°C and 0.5 atm pressure, the volume of He will be
- a. 700 m^3 b. 900 m^3
c. 1000 m^3 d. 500 m^3
20. The ratio of intensity at the centre of a bright fringe to the intensity at a point distance one-fourth of the distance between two successive bright fringes will be
- a. 4 b. 3
c. 2 d. 1
21. A rectangular block of mass m and area of cross-section A floats in a liquid of density ρ . If it is given a vertical displacement from equilibrium, it undergoes oscillation with a time period T . Then
- a. $T \propto \sqrt{\rho}$ b. $T \propto \frac{1}{\sqrt{A}}$
c. $T \propto \frac{1}{\sqrt{\rho}}$ d. $T \propto \frac{1}{\sqrt{m}}$

22. Three charges are placed at the three vertices of an equilateral triangle of side 'a' as shown in the figure. The force experienced by the charge placed at the vertex A in a direction normal to BC is

- a. $\frac{Q^2}{4\pi\epsilon_0 a^2}$
 b. $-\frac{Q^2}{4\pi\epsilon_0 a^2}$
 c. zero
 d. $\frac{Q^2}{2\pi\epsilon_0 a^2}$
23. A load of mass m falls from a height h on the scale pan hung from a spring as shown. If the spring constant is k and the mass of the scale pan is zero and the mass m does not bounce relative to the pan, then the amplitude of vibration is

- a. $\frac{mg}{k}$
 b. $\frac{mg}{k} \sqrt{1 + \frac{2hk}{mg}}$
 c. $\frac{mg}{k} + \frac{mg}{k} \sqrt{\frac{1 + 2hk}{mg}}$
 d. None of these
24. The activity of a radioactive sample is measured as N_0 counts per minute at $t = 0$ and $\frac{N_0}{e}$ counts per minute at $t = 5$ min. The time (in minutes) at which the activity reduces to half its value is

- a. $\log_e \frac{2}{5}$
 b. $\frac{5}{\log_e 2}$
 c. $5 \log_{10} 2$
 d. $5 \log_e 2$
25. A plano-convex lens fits exactly into a plano-concave lens. Their plane surfaces are parallel to each other. If lenses are made of different materials of refractive indices μ_1 and μ_2 , R is the radius of curvature of the curved surface of the lenses, then the focal length of combination is

- a. $\frac{R}{2(\mu_1 + \mu_2)}$
 b. $\frac{R}{2(\mu_1 - \mu_2)}$
 c. $\frac{R}{(\mu_1 - \mu_2)}$
 d. $\frac{2R}{\mu_1 - \mu_2}$

26. In the given circuit diagram,

$$E = 5 \text{ V}, r = 1\Omega, R_2 = 4\Omega, R_1 = R_3 = 1\Omega \text{ and } C = 3\mu\text{F}$$

Then, what will be the numerical value of charge on each plates of the capacitor.

- a. $24\mu\text{C}$
 b. $12\mu\text{C}$
 c. $6\mu\text{C}$
 d. $3\mu\text{C}$
27. A block A of mass 100 kg rests on another block B of mass 200 kg and is tied to a wall as shown in the figure. The coefficient of friction between A and B is 0.2 and that between B and ground is 0.3. The minimum force required to move the block B is ($g = 10\text{ms}^{-2}$)

- a. 900 N
 b. 200 N
 c. 1100 N
 d. 700 N
28. A uniform rod of length l and mass m is free to rotate in a vertical plane about A. The rod initially in horizontal position is released. The initial angular acceleration of the rod is (Moment of inertia of rod about A is $\frac{ml^2}{3}$)

- a. $\frac{3g}{2l}$
 b. $\frac{2l}{3g}$
 c. $\frac{3g}{2l^2}$
 d. $mg \frac{l}{2}$
29. Monochromatic radiation of wavelength λ is incident on a hydrogen sample in ground state. Hydrogen atom absorbs a fraction of light and subsequently emits radiations of six different wavelengths. The wavelength λ is

- a. 97.5 nm
 b. 121.6 nm
 c. 110.3 nm
 d. 45.2 nm

4 SELF STUDY GUIDE BITSAT

30. A coil in the shape of an equilateral triangle of side l is suspended between the pole pieces of a permanent magnet such that B is in plane of the coil. If due to a current i in the triangle, a torque τ rests on it, the side l of the triangle is

a. $2 \left(\frac{\tau}{\sqrt{3} Bi} \right)^{\frac{1}{2}}$ b. $\frac{2}{\sqrt{3}} \left(\frac{\tau}{Bi} \right)$
 c. $2 \left(\frac{\tau}{Bi} \right)^{\frac{1}{2}}$ d. $\frac{1}{\sqrt{3}} \left(\frac{\tau}{Bi} \right)$

31. Work done in increasing the size of a soap bubble from radius of (3 to 5) cm is nearly (surface tension of soap solution = 0.03 Nm^{-1})

a. $0.2 \pi \text{ mJ}$ b. $2\pi \text{ mJ}$ c. 0.4 mJ d. $4\pi \text{ mJ}$

32. The velocity of a projectile at the initial point A is $(2\hat{i} + 3\hat{j}) \text{ m/s}$. Its velocity (in m/s) at point B is

a. $-2\hat{i} - 3\hat{j}$ b. $-2\hat{i} + 3\hat{j}$
 c. $2\hat{i} - 3\hat{j}$ d. $2\hat{i} + 3\hat{j}$

33. In the circuit shown, the heat produced in 5Ω resistor is 10 cal s^{-1} . The heat produced per sec in 4Ω resistor will be

a. 1 cal b. 2 cal c. 3 cal d. 4 cal

34. An α -particle after passing through potential difference of V volt collides with a nucleus. If the atomic number of the nucleus is Z , then distance of closest approach is

a. $14.4 \cdot \frac{Z}{V}$
 b. $14.4 \frac{Z}{V} \text{ m}$
 c. $14.4 \frac{V}{Z} \text{ m}$
 d. $14.4 \frac{V}{Z}$

35. Two simple pendulums of lengths 5m and 20m respectively are given small displacement in one direction at the same time they will again be in the same sense when the pendulum of shorter length has completed n oscillations. Then, n is

a. 5 b. 1 c. 2 d. 3

36. A parallel plate capacitor with air between the plates has a capacitance of 9 pF. The separation between the plates is d . The space between the plates is now filled with two dielectrics constant $K_1 = 3$ and thickness $\frac{d}{3}$ while the other one has dielectric constant $K_2 = 6$ and thickness $\frac{2d}{3}$. Capacitance of the capacitor is now

a. 1.8 pF b. 45 pF
 c. 40.5 pF d. 20.25 pF

37. A particle moving along X -axis has acceleration f , at time t given by $f = f_0 \left(1 - \frac{t}{T} \right)$, where f_0 and T are constants. The particle at $t = 0$ and the instant when $f = 0$, the particle's velocity v_x is

a. $f_0 T$ b. $\frac{1}{2} f_0 T^2$
 c. $f_0 T^2$ d. $\frac{1}{2} f_0 T$

38. A geostationary satellite orbits around the earth in a circular orbit of radius 36000 km. Then, the time period of a sky satellite orbiting a few 100 km above the earth's surface ($R = 64000 \text{ km}$) will approximately be

a. $\frac{1}{2} \text{ h}$ b. 1 h c. 2 h d. 4 h

39. A transverse wave propagating on a stretched string of linear density $3 \times 10^{-4} \text{ kgm}^{-1}$ is represented by the equation

$$y = 0.2 \sin(1.5x + 60t)$$

where, x in metres and t is in seconds. The tension in the string (in Newton) is

a. 0.24 b. 0.48
 c. 1.20 d. 1.80

40. What is the magnetic field at the centre of arc in the figure below?

a. $\frac{\mu_0}{4\pi} \cdot \frac{2i}{r} [\sqrt{2} + \pi]$ b. $\frac{\mu_0}{4\pi} \cdot \frac{2i}{r} \left[\sqrt{2} + \frac{\pi}{4} \right]$
 c. $\frac{\mu_0}{4\pi} \cdot \frac{i}{r} [\sqrt{2} + \pi]$ d. $\frac{\mu_0}{4\pi} \cdot \frac{i}{r} \left[\sqrt{2} + \frac{\pi}{4} \right]$

PART II

Chemistry

41. 4g of copper was dissolved in conc. HNO_3 . The copper nitrate thus obtained gave 5g of its oxide on strong heating the equivalent weight of copper is
 a. 23 b. 32
 c. 12 d. 20
42. Choose the incorrect statement.
 a. Sodium borohydride reacts very slowly with cold water
 b. Sodium borohydride reacts violently with cold water to give $\text{H}_2(g)$
 c. Solubility of sodium borohydride in water at 25°C is 10.05 g/ml
 d. Melting point of sodium borohydride is 500°C
43. The orbital angular momentum of an electron is 2 S orbital is
 a. $\frac{h}{4\pi}$ b. zero
 c. $\frac{h}{2\pi}$ d. $\sqrt{2} \cdot \frac{h}{2\pi}$
44. Which of the following are isoelectronic species?
 I. C^+H_3 II. NH_2^-
 III. NH_4^+ IV. NH_3
 a. I, II and III b. II, III and IV
 c. I, II and IV d. II and I
45. Two elements A and B have electronegativities 1.2 and 3.0 respectively. The nature of bond between A and B would be
 a. ionic b. covalent
 c. co-ordinate d. metallic
46. In the compound,
 $\text{CH}_2 = \text{CH} - \text{C} \equiv \text{CH}$
 (I) (II) (III)
 The most acidic hydrogen atom is
 a. Only I b. Only II
 c. Only III d. All are equally acidic
47. Reductive ozonolysis of $(\text{CH}_3)_2\text{C} = \text{C}(\text{CH}_3)_2$ followed by hydrolysis gives
 a. only one type of ketone
 b. only one type of aldehyde
 c. two types of ketone
 d. two types of aldehyde
48. Which of the following reactions does not involved absorption energy?
 I. $\text{O}(g) + e^- \longrightarrow \text{O}^-(g)$
 II. $\text{S}(g) + e^- \longrightarrow \text{S}^-(g)$
 III. $\text{O}^-(g) + e^- \longrightarrow \text{O}^{2-}(g)$
 IV. $\text{Cl}(g) + e^- \longrightarrow \text{Cl}^-(g)$
 a. Only II b. I and III
 c. I, II and III d. I, II and IV
49. The most reactive amine towards reactions with dil. HCl is
 a. $\text{CH}_3\text{—NH}_2$ b.  c. $(\text{CH}_3)_3\text{N}$ d. 
50. Blocks of magnesium are fixed to the bottom of a ship to
 a. block hole in the ship
 b. acidity of sea water
 c. make the ship lighter
 d. prevent the action of water and salt
51. On electrolysis of water, a total of 1 mole of gases is evolved. The amount of water decomposed is
 a. 1 mol b. 2 mol c. $\frac{1}{3}$ mol d. $\frac{2}{3}$ mol
52. How many moles of Fe^{2+} ions are formed when excess of iron react with 500 mL O_2 , 4NHCl , under inert atmosphere?
 (assume no change in volume)
 a. 0.4 b. 0.1 c. 0.2 d. 0.8
53. Sodium sulphate is soluble in water but barium sulphate is insoluble because
 a. hydration energy of Na_2SO_4 is more than of its lattice energy
 b. lattice energy of BaSO_4 is more than its hydration energy
 c. Both (a) and (b)
 d. None of the above
54. In the reaction,
 $\text{CH}_3 \cdot \text{CH}_2 \cdot \text{Cl} \xrightarrow{\text{KCN}} (\text{A}) \xrightarrow{\text{LiAlH}_4} (\text{P})$ end product (P) is
 a. $\text{CH}_3\text{CH}_2 \cdot \text{NO}_2$ b. $\text{CH}_3\text{CH}_2\text{CH}_2\text{NO}_2$
 c. $\text{CH}_3\text{CH}_2\text{NH}_2$ d. $\text{CH}_3 \cdot \text{CH}_2 \cdot \text{CH}_2\text{NH}_2$
55. Which of the following reactions is an example of calcination process?

6 SELF STUDY GUIDE BITSAT

- a. $2\text{Ag} + 2\text{HCl} + [\text{O}] \longrightarrow 2\text{AgCl} + \text{H}_2\text{O}$
 b. $2\text{Zn} + \text{O}_2 \longrightarrow 2\text{ZnO}$
 c. $2\text{ZnS} + 3\text{O}_2 \longrightarrow 2\text{ZnO} + 2\text{SO}_2$
 d. $\text{MgCO}_3 \xrightarrow{\Delta} \text{MgO} + \text{CO}_2$
56. For an endothermic reaction, where ΔH represent the enthalpy of reaction in kJ/mol, the minimum value for energy of activation (for forward reaction) will be
 a. less than ΔH b. zero
 c. more than ΔH d. equal to ΔH
57. Which of the following metal is leached by cyanide process
 a. Ag b. Na c. Al d. Cu
58. Which of the following is a diamagnetic complex
 a. $[\text{Co}(\text{NH}_3)_6]^{3+}$ b. $[\text{NiCl}_4]^{2-}$
 c. $[\text{CuCl}_4]^{2-}$ d. $[\text{Fe}(\text{H}_2\text{O})_6]^{3+}$
59. Neoprene is a
 a. monomer of rubber b. synthetic rubber
 c. a natural rubber d. vulcanised rubber
60. Among the following, which have highest melting point?
 a. Ionic solids b. Pseudo solids
 c. Molecular solids d. Amorphous solids
61. The night-blindness is developed due to deficiency of vitamin
 a. B₆ b. C c. B₁₂ d. A
62. The transfer RNA anticodon for the messenger RNA codon G – C – A is
 a. C – G – U b. C – C – U
 c. U – C – C d. G – U – C
63. 0.765 g of an acid gives 0.535 g of CO_2 and 0.138 g of H_2O . Then, the ratio of percentage of carbon and hydrogen is
 a. 19 : 2 b. 18 : 11
 c. 20 : 17 d. 1 : 7
64. Maximum pK_b value is of
 a.  b. $(\text{CH}_3\text{CH}_2)_2\text{NH}$
 c. $(\text{CH}_3)_2\text{NH}$ d. 
65. Which of the following is an incorrect set of quantum members?
 a. $n = 2, l = 0, m = 0$ b. $n = 1, l = 0, m = 0$
 c. $n = 3, l = 3, m = 0$ d. $n = 2, l = 1, m = 1$
66. The most acidic oxide for nitrogen is
 a. NO_2 b. N_2O
 c. NO d. N_2O_5
67. Which of the following show maximum bond-order?
 a. O_2 b. O_2^-
 c. O_2^+ d. O_2^{2-}
68. Which of the following show an increase in entropy?
 I. Boiling of water
 II. Melting of ice
 III. Freezing of water
 IV. Formation of hydrogen gas from water
 a. (I) and (II) b. Only (III)
 c. (I), (II) and (IV) d. (III) and (IV)
69. BF_3 is an acid, according to
 a. Lewis
 b. Arrhenius
 c. Bronsted and Lowery
 d. All of the above
70. For the reaction
 $\text{N}_2\text{O}_4(g) \longrightarrow 2\text{NO}_2(g)$
 a. $\Delta H > \Delta E$ b. $\Delta H < \Delta E$
 c. $\Delta H = \Delta E$ d. $\Delta H = 0$
71. Which of the following elements mostly form covalent compounds?
 a. Cs b. Rb
 c. K d. Li
72. When aqueous solutions of borax is acidified with HCl, we get
 a. B_2H_6 b. H_3BO_3
 c. B_2O_3 d. All of these
73. Which of the following compound does not follow Huckel's rule?
 a.  b. 
 c.  d. 

74. A graph is plotted between $\log K$ versus $\frac{1}{T}$ for calculation of activation energy (E_a). The correct plot is

75. The hybridisation of Fe is $K_3Fe(CN)_6$ is
 a. sp^3 b. dsp^3 c. sp^3d^2 d. d^2sp^3
76. Which of the following shows maximum magnetic moment?
 a. Mg^{2+} b. Ti^{3+} c. V^{3+} d. Fe^{2+}

77. Consider the following radioactive decays

In which case group of parent and daughter elements remains unchanged.

- a. In (I)
 b. In (II)
 c. Both in (I) and (II)
 d. None of the above

78. Chlorobenzene $\xrightarrow{\text{Reaction-(X)}}$ Phenol
 $\xrightarrow{\text{Reaction-(Y)}}$ Salicylaldehyde.

The reactions(s) 'X' and 'Y' respectively are

- a. Fries rearrangement and Kolbe
 b. Cumene and Reimer-Tiemann
 c. Dow and Reimer-Tiemann
 d. Dow and Sandmeyer.

79. Which of the following has largest number of moles?

- a. 8 g of oxygen atoms
 b. 16 g of oxygen gas
 c. 14 g of nitrogen gas (N_2)
 d. All have same number of moles

80. One moles each of four ideal gases are kept as follows.

- I. 5 L of gas (A) at 2 atm pressure
 II. 2.5 L of gas (B) at 2 atm pressure
 III. 1.25 L of gas (C) at 2 atm pressure
 IV. 2.5 L of gas (D) at 2.5 atm pressure

Which of the above gases is kept at highest temperature.

- a. Gas (A) b. Gas (B)
 c. Gas (C) d. Gas (D)

Part III

a. English Proficiency

Directions (Q. Nos. 81-83) *In the following questions the sentences may or may not be grammatically correct. Find out which part of a sentence has an error and mark that part. If there is no error mark part 'd' as your answer.*

81. Along the northern frontier of India is seen
a *b*
the Himalayas mighty in their splendour. No error
c *d*
82. The father with the son were mysteriously missing
a *b*
from the house. No error
c *d*
83. It is not advisable to take heavy luggages
a *b*
while on journey these days. No error
c *d*

Directions (Q. Nos. 84-85) *Fill in the blanks with suitable preposition from the alternatives given under each sentence.*

84. The problem of communal harmony cannot be glossed by the government.
a. at b. on c. over d. for
85. She could not muster courage to stand against the maltreatment.
a. to b. up c. about d. on

Directions (Q. Nos. 86-88) *The following sentences consist of a word or a phrase which is written in italicised letters. Each sentence is followed by four words or phrases. Select the word or the phrase which is closest to the opposite in meaning of the italicised word or phrase.*

- 86.** Philosophers say that the world is *an illusion*.
a. a fact b. a reality c. an actuality d. a truth
- 87.** She used to *disparage* her neighbours every now and then.
a. please b. praise c. belittle d. denigrate
- 88.** The momentum of the movement *slackened* in course of time.
a. stopped b. quickened c. multiplied d. recovered

Directions (Q. Nos. 89-90) *In the following sentences, a word or a phrase is written in italicised letters. For each italicised part four words/phrases are listed below each sentence. Choose the word nearest in meaning to the italicised word/phrase.*

89. The opposition criticised the ruling party for the *deteriorating* law and order situation in the state.
a. disrupting b. worsening c. crumbling d. eroding
90. The two opposing parties have reached *stalemate*.

- a. dilemma b. deadlock c. exhaustion d. settlement

Directions (Q. Nos. 91-95) *Read the passage given below and answer the questions that follow.*

A pioneering scheme has been started recently in Southampton of England's south coast to educate tourists who have been convicted of drunken driving.

The penalty for drunken driving might be the loss of the driving licence and a heavy fine. But under the new scheme, convicted drivers do not pay the fine. Instead they have to attend eight training sessions; one a week organised by the local authority probation service.

Designed to demonstrate the damage alcohol can do, the scheme was devised by senior probation officer John Cook. He said that about a quarter of the people who came to him had a drinking problem, and had not realised how much they were drinking. One way of getting the message across was to make the drivers pour out their usual ration of alcohol and then measure it. Almost everyone poured out not a single measure, but a double at least, an example of how easy it is to have more than just one drink and to encourage other people to do the same. The instructors on the course are giving clinical evidence of the effects of alcohol on the body and brain. The sober truth is that drinking badly affects driving skills, although the drinker might like to believe otherwise.

91. The Southampton scheme requires convicted drivers
 - a. to pay a heavy fine
 - b. to attend eight driving sessions-one a week
 - c. to undergo a probation service
 - d. to surrender their driving licence
92. John Cook devised the scheme
 - a. as a demonstration technique for driving
 - b. to deny the harmful effects of alcohol
 - c. to show that Southampton was concerned about drivers
 - d. to prove that alcohol does influence driving
93. The problem with a quarter of the people who went to John Cook was that they
 - a. did not want to stop drinking
 - b. were unaware of the fact that they could get drunk
 - c. would not admit that they had a drinking problem
 - d. did not know how much they were drinking
94. Most drivers start off with atleast
 - a. a double measure b. a single measure
 - c. a little less than a single measure
 - d. two doubles
95. The truth is that alcohol
 - a. does not affect the body but only the brain
 - b. affects only the brain
 - c. affects the body and the brain
 - d. has no effect on the body or the brain

b. Logical Reasoning

96. 'Shoes' is related to 'Leather', in the same way as 'Rubber' is related to

- a. Plastic b. Polythene
c. Latex d. Chappal

97. Find the odd one from the following options

- a. 81 : 243 b. 25 : 75
c. 64 : 192 d. 16 : 64

98. Complete the series by replacing '?' mark.

4, 11, 30, 67, 128, ?

- a. 219 b. 228
c. 237 d. 240

99. Lakshmi is elder than Meenu. Leela is elder than Meenu but younger than Lakshmi. Latha is younger than both Meenu and Hari but Hari is younger than Meenu. Who is the youngest?

- a. Lakshmi b. Meenu
c. Leela d. Latha

100. In the following question a part of problem figure is missing. Find out from the given answer figures *a, b, c* and *d* that can replace the question mark (?) to complete the figure.

Question Figure

Answer Figure

101. In the following question, five figures are given. Out of them find the three figures that can be joined to form a square.

- a. ACD b. BCD
c. BDE d. CDE

102. The three problem figures marked X, Y and Z show the manner in which a piece of paper is folded step by step and then cut. From the answer figures *a, b, c* and *d* select the one showing the unfolded pattern of the paper after the cut.

Question Figures

Answer Figures

103. Choose the answer figure which completes the problem figure matrix.

Question Figures

Answer Figures

104. In the following question, one or more dots are placed in the figure marked as (A). This figure is followed by four alternatives marked as *a, b, c* and *d*. One out of these four options contains region(s) common to circle, square and triangles, similar to that marked by the dot in figures (A). Find that figure

Question Figure

Answer Figures

105. How many different triangles are there in the figures shown below?

- a. 28 b. 24
c. 20 d. 16

Part IV

Mathematics

- 106.** The coefficient of x^5 in the expansion of $(1+x)^{21} + (1+x)^{22} + \dots + (1+x)^{30}$ is
- a. ${}^{51}C_5$ b. 9C_5
c. ${}^{31}C_6 - {}^{21}C_6$ d. ${}^{30}C_5 + {}^{20}C_5$
- 107.** If $z = a + ib$ satisfies $\arg(z-1) = \arg(z+3i)$, then $(a-1):b =$
- a. $2:1$ b. $1:3$
c. $-1:3$ d. None of these
- 108.** If p and p' denote the lengths of the perpendicular from a focus and the centre of an ellipse with semi-major axis of length a , respectively, on a tangent to the ellipse and r denotes the focal distance of the point, then
- a. $ap = rp'$ b. $rp = ap'$
c. $ap = rp' + 1$ d. $ap' + rp = 1$
- 109.** The value of $\sum_{r=1}^{10} r \cdot \frac{{}^nC_r}{{}^nC_{r-1}}$ is equal to
- a. $5(2n-9)$ b. $10n$
c. $9(n-4)$ d. None of these
- 110.** The numbers $3^{2\sin 2\alpha - 1}$, 14 and $3^{4-2\sin 2\alpha}$ form first three terms of an A.P., its fifth term is
- a. -25 b. -12 c. 40 d. 53
- 111.** For the equation $3x^2 + px + 3 = 0$, $p > 0$, if one of the roots is square of the other, then p is equal to
- a. $\frac{1}{2}$ b. 1 c. 3 d. $\frac{2}{3}$
- 112.** If $a = \log_2 3$, $b = \log_2 5$ and $c = \log_7 2$, then $\log_{140} 63$ in terms of a, b, c is
- a. $\frac{2ac+1}{2c+abc+1}$ b. $\frac{2ac+1}{2a+c+a}$
c. $\frac{2ac+1}{2c+ab+a}$ d. None of these
- 113.** If $\cos(x-y)$, $\cos x$ and $\cos(x+y)$ are in HP, then $\cos x \sec(y/2)$ is equal to
- a. $\pm \sqrt{2}$ b. $\pm 1/\sqrt{2}$
c. ± 2 d. None of these
- 114.** Let $A = \{1, 2, 3, 4, 5\}$ and R be a relation defined by $R = \{(x, y) : x, y \in A, x+y=5\}$. Then, R is
- a. reflexive and symmetric but not transitive
b. an equivalence relation
c. symmetric but neither reflexive nor transitive
d. neither reflexive nor symmetric but transitive
- 115.** The number of times the digit 5 will be written when listing the integers from 1 to 1000, is
- a. 271 b. 272
c. 300 d. None of these
- 116.** Let A and B be two sets such that $A \cap X = B \cap X = \phi$ and $A \cup X = B \cup X$ for same set X . Then,
- a. $A = B$ b. $A = X$
c. $B = X$ d. $A \cup B = X$
- 117.** Let $A = [-1, 1]$ and $f: A \rightarrow A$ be defined as $f(x) = x|x|$ for all $x \in A$, then $f(x)$ is
- a. many-one and into function
b. one-one and into function
c. many-one and into function
d. one-one and onto function
- 118.** The general solution of $\sin x - 3 \sin 2x + \sin 3x = \cos x - 3 \cos 2x + \cos 3x$ is
- a. $n\pi + \frac{\pi}{8}$ b. $\frac{n\pi}{2} + \frac{\pi}{8}$
c. $(-1)^n \frac{n\pi}{2} + \frac{\pi}{8}$ d. $2n\pi + \cos^{-1} \frac{3}{2}$
- 119.** Two equal sides of an isosceles triangle are $7x - y + 3 = 0$ and $x + y - 3 = 0$ and its third side passes through the point $(1, -10)$. Find the equation of the third side
- a. $x - 3y = -31$ b. $x - 3y = 31$
c. $x + 3y = 31$ d. $x + 3y = -31$
- 120.** If two distinct chords drawn from the point (p, q) on the circle $x^2 + y^2 = px + qy$ (where $pq \neq 0$) are bisected by the X -axis, then
- a. $p^2 = q^2$ b. $p^2 = 8q^2$
c. $p^2 < 8q^2$ d. $p^2 > 8q^2$
- 121.** The length of perpendicular drawn from the point $(2, 3, 4)$ to line $\frac{4-x}{2} = \frac{y}{6} = \frac{1-z}{3}$, is
- a. $\frac{3}{7} \sqrt{101}$ b. $\frac{2}{7} \sqrt{101}$
c. $\frac{2}{7} \sqrt{103}$ d. $\frac{3}{7} \sqrt{103}$
- 122.** The image of the point $(1, 6, 3)$ in the line $\frac{x}{1} = \frac{y-1}{2} = \frac{z-2}{3}$ is
- a. $(-1, 0, 7)$ b. $(-1, 0, -7)$
c. $(1, 0, 7)$ d. $(2, 0, 7)$

123. The distances of the point $(1, -5, 9)$ from the plane $x + y + z = 5$ measured along a straight line $x = y = z$ is $2\sqrt{3}k$, then the value of k is

a. 5
b. 6
c. $\sqrt{3}$
d. 4

124. $\lim_{n \rightarrow \infty} \sin[\pi\sqrt{n^2 + 1}]$ is equal to

a. ∞
b. 0
c. does not exist
d. None of these

125. If $f(x) = \begin{cases} e^x, & x \leq 0 \\ |1-x|, & x > 0 \end{cases}$, then

a. $f(x)$ is differentiable at $x = 0$
b. $f(x)$ is continuous at $x = 0$, 1
c. $f(x)$ is differentiable at $x = 1$
d. None of the above

126. If a function $f: \mathbb{R} \rightarrow \mathbb{R}$ satisfy the equation $f(x+y) = f(x) + f(y)$, $\forall x, y$ and the function $f(x)$ is continuous at $x = 0$, then

a. $f(x)$ is continuous for all positive real values of x
b. $f(x)$ is continuous for all x
c. $f(x) = 0$ for all x
d. None of the above

127. The value of $f(0)$, so that the function $f(x) = \frac{2x - \sin^{-1} x}{2x + \tan^{-1} x}$ is continuous at each point in its domain, is

a. $\frac{1}{3}$
b. $-\frac{1}{3}$
c. $\frac{2}{3}$
d. $-\frac{2}{3}$

128. Consider the greatest integer function, defined by $f(x) = [x]$, $0 \leq x < 2$. Then,

a. f is derivable at $x = 1$
b. f is not derivable at $x = 1$
c. f is derivable at $x = 2$
d. None of these

129. Let $f(x) = -2x^3 + 21x^2 - 60x + 41$, then

a. $f(x)$ is decreasing in $(-\infty, 1)$
b. $f(x)$ is decreasing in $(-\infty, 2)$
c. $f(x)$ is increasing in $(-\infty, 1)$
d. $f(x)$ is increasing in $(-\infty, 2)$

130. Rolle's theorem is not applicable for the function $f(x) = |x|$ in the interval $[-1, 1]$ because

a. $f'(1)$ does not exist
b. $f'(-1)$ does not exist
c. $f(x)$ is discontinuous at $x = 0$
d. $f'(0)$ does not exist

131. If the curve $y = a^x$ and $y = b^x$ intersect at angle α , then $\tan \alpha$ is equal to

a. $\frac{a-b}{1+ab}$
b. $\frac{\log a - \log b}{1 + \log a \log b}$
c. $\frac{a+b}{1-ab}$
d. $\frac{\log a + \log b}{1 - \log a \log b}$

132. The expression $\frac{\int_0^n [x] dx}{\int_0^n \{x\} dx}$, where $[x]$ and $\{x\}$ are integral

and fractional part of x and $n \in \mathbb{N}$, is equal to

a. $\frac{1}{n-1}$
b. $\frac{1}{n}$
c. n
d. $n-1$

133. The maximum value of $f(x) = x + \sin 2x$, $x \in [0, 2\pi]$ is

a. $\frac{\pi}{2}$
b. 2π
c. $\frac{3\pi}{4}$
d. $\frac{3\pi}{2}$

134. The area under the curve $y = |\cos x - \sin x|$, $0 \leq x \leq \frac{\pi}{2}$ and above X -axis, is

a. $2\sqrt{2}$
b. $2\sqrt{2} - 2$
c. $2\sqrt{2} + 2$
d. 0

135. The solution of $\frac{dy}{dx} = \cos(x+y) + \sin(x+y)$, is

a. $\log \left[1 + \tan \left(\frac{x+y}{2} \right) \right] + C = 0$
b. $\log \left[1 + \tan \left(\frac{x+y}{2} \right) \right] = x + C$
c. $\log \left[1 - \tan \left(\frac{x+y}{2} \right) \right] = x + C$
d. None of the above

136. The area enclosed by the curves $y = x^3$ and $y = \sqrt{x}$ is

a. $\frac{5}{3}$ sq units
b. $\frac{5}{4}$ sq units
c. $\frac{5}{12}$ sq units
d. $\frac{12}{5}$ sq units

137. If $\lim_{x \rightarrow \infty} \left(an - \frac{1+n^2}{1+n} \right) = b$, where a is finite number, then

a. $a = 2$
b. $a = 0$
c. $b = 1$
d. $b = -1$

138. If the papers of 4 students can be checked by anyone of the 7 teachers, then the probability that all the 4 papers are checked by exactly 2 teachers, is equal to

a. $\frac{12}{49}$
b. $\frac{6}{49}$
c. $\frac{9}{49}$
d. $\frac{15}{49}$

12 SELF STUDY GUIDE **BITSAT**

- 139.** If equation $(10x - 5)^2 + (10y - 4)^2 = \lambda^2 (3x + 4y - 1)^2$ represents a hyperbola, then
 a. $-2 < \lambda < 2$
 b. $\lambda > 2$
 c. $\lambda < -2$ or $\lambda > 2$
 d. $0 < \lambda < 2$

140. Let $\hat{a}$ and $\hat{b}$ be two non-collinear unit vectors. If $u = \hat{a} - (\hat{a} \cdot \hat{b})\hat{b}$ and $v = \hat{a} \times \hat{b}$, then $|v|$ is equal to
 a. $|u|$
 b. $|u| + |v \cdot \hat{a}|$
 c. $2|v|$
 d. $|v| + u \cdot (\hat{a} + \hat{b})$

141. If the variance of the observations $x_1, x_2, \dots, x_n$ is σ^2 , then the variance of $\alpha x_1, \alpha x_2, \dots, \alpha x_n$, $\alpha \neq 0$ is
 a. σ^2
 b. $\alpha \sigma^2$
 c. $\alpha^2 \sigma^2$
 d. $\frac{\sigma^2}{\alpha^2}$

142. Coefficient of variation of two distributions are 50 and 60 and their arithmetic means are 30 and 25, respectively. Difference of their standard deviation is
 a. 0
 b. 1
 c. 1.3
 d. 2.5

143. The maximum value of $z = 9x + 13y$ subject to constraints $2x + 3y \leq 18$, $2x + y \leq 10$, $x \geq 0$, $y \geq 0$ is
 a. 130
 b. 81
 c. 79
 d. 99

144. A coin is tossed 7 times. Each time a man calls head. The probability that he wins the toss atleast 4 occasions is
 a. $\frac{1}{4}$
 b. $\frac{5}{8}$
 c. $\frac{1}{2}$
 d. $\frac{1}{6}$

145. If $\sin^{-1} x + \sin^{-1} y + \sin^{-1} z = \frac{3\pi}{2}$ and $f(1) = 2$,
 $f(p + q) = f(p) \cdot f(q)$, $\forall p, q \in R$, then
 $x^{f(1)} + y^{f(2)} + z^{f(3)} - \frac{(x + y + z)}{x^{f(1)} + y^{f(2)} + z^{f(3)}}$ is equal to
 a. 0
 b. 1
 c. 2
 d. 3

146. The value of $\frac{2}{1!} + \frac{2+4}{2!} + \frac{2+4+6}{3!} + \dots$ is
 a. e
 b. $2e$
 c. $3e$
 d. None of these

147. If z_1, z_2 and z_3 represent the vertices of an equilateral triangle such that $|z_1| = |z_2| = |z_3|$, then
 a. $z_1 + z_2 = z_3$
 b. $z_1 + z_2 + z_3 = 0$
 c. $z_1 z_2 = \frac{1}{z_3}$
 d. $z_1 - z_2 = z_3 - z_2$

148. If $\int \frac{(\sqrt{x})^5 dx}{(\sqrt{x})^7 + x^6} = \lambda \log \left(\frac{x^9}{x^9 + 1} \right) + C$, then $a + \lambda$ equal to
 a. 2
 b. > 2
 c. < 2
 d. > 3

149. Line joining the points $(0, 3)$ and $(5, -2)$ is a tangent to the curve $y = \frac{ax}{1+x}$, then
 a. $a = 1 \pm \sqrt{3}$
 b. $a \in \phi$
 c. $a = -1 \pm \sqrt{3}$
 d. $a = -2 \pm 2\sqrt{3}$

150. The shortest distance between the parabolas $y^2 = 4x$ and $y^2 = 2x - 6$ is
 a. 2
 b. $\sqrt{5}$
 c. 3
 d. None of these

SOLUTIONS

Physics

1. (a) According to Stefan's law $\rho = \frac{E}{t} = \sigma A e T^4$

So, we can write as

$$\frac{E_2}{E_1} = \left(\frac{T_2}{T_1}\right)^4$$

$$\frac{E_2}{E_1} = \left(\frac{900}{300}\right)^4 \Rightarrow \frac{E_2}{E_1} = (3)^4$$

$$E_2 = 81 E_1 \Rightarrow \frac{E_2}{E_1} = 81$$

2. (d) $v_s = r\omega = 1.2 \times 2\pi f$

$$= 1.2 \times 2 \times 3.14 \times \left(\frac{400}{60}\right) = 50 \text{ m/s}$$

$$v_{\min} = \frac{v}{v + v_s} \cdot v$$

$$= \frac{340}{340 + 50} \times 500$$

$$= 436 \text{ Hz}$$

$$v_{\max} = \frac{v}{v - v_s} \cdot v$$

$$= \frac{340}{340 - 50} \times 500$$

$$= 586 \text{ Hz}$$

3. (c) We have, $f_r - f_b = \omega f_y$

$$\omega = \frac{f_r - f_b}{f_y}$$

Here, $f_r = 100 \text{ cm}$

$$f_b = 96.8 \text{ cm}$$

$$f_y = \sqrt{f_b \times f_r}$$

$$= \sqrt{96.8 \times 100}$$

$$= 98 \text{ cm}$$

$\therefore$ Dispersive power

$$\omega = \frac{f_r - f_b}{f_y}$$

$$= \frac{100 - 96.8}{98}$$

$$= \frac{3.2}{98} = 0.0325$$

4. (b) $V = 800 \text{ V}$

$$E = \frac{V}{d} = \frac{800}{2 \times 10^{-2}} \text{ V/m}$$

$$= 4 \times 10^4 \text{ V/m}$$

$$qE = mg$$

$$\Rightarrow q = \frac{mg}{E}$$

$$= \frac{1.96 \times 10^{-15} \times 9.8}{4 \times 10^4} \text{ coulomb}$$

$$= \frac{1.96 \times 10^{-15} \times 9.8}{4 \times 10^4 \times 1.6 \times 10^{-19}} \text{ elementary charges}$$

$$= 3e$$

5. (b) Given, $H = R$

$$\text{or } \frac{u^2 \sin^2 \theta}{2g} = \frac{u^2 \sin 2\theta}{g}$$

$$= \frac{2u^2 \sin \theta \cos \theta}{g}$$

$$\text{or } \tan \theta = 4$$

$$\Rightarrow \theta = \tan^{-1}(4)$$

6. (b) Given, $a = 6 \text{ cm} = 6 \times 10^{-2} \text{ m}$

$$\omega = 100 \text{ rad/s}, m = 1 \text{ kg}$$

$$K_{\max} = \frac{1}{2} m \omega^2 a^2$$

$$= \frac{1}{2} \times 1 \times (100)^2 \times (6 \times 10^{-2})^2$$

$$= 18 \text{ J}$$

7. (b) From triangle ABC

$$\sin \theta = \frac{l}{H} = \frac{\frac{mv}{\sqrt{2} qB}}{\frac{mv}{qB}}$$

$$= \frac{1}{\sqrt{2}}$$

$$\Rightarrow \sin \theta = \sin 45^\circ$$

$$= \sin \frac{\pi}{4}$$

$$\text{Time period for angle } 2\pi \text{ is } T = \frac{2\pi m}{qB}$$

∴ Time by charged particle to emerge from magnetic field is $\frac{\pi m}{4qB}$.

8. (b) Given, $\lambda_1 = 12000 \text{ \AA}$

and $\lambda_2 = 10000 \text{ \AA}$

$D = 2 \text{ cm}$

$d = 2 \text{ mm} = 2 \times 10^{-3} \text{ m}$

We have,

$$\frac{\lambda_1}{\lambda_2} = \frac{n_2}{n_1} = \frac{12000}{10000} = \frac{6}{5}$$

as $X = \frac{n_1 \lambda_1 D}{d}$

$$= \frac{5 \times 12000 \times 10^{-10} \times 2}{2 \times 10^{-3}}$$

$$= 5 \times 1.2 \times 10^4 \times 10^{-10} \times 10^3 = 6 \text{ mm}$$

9. (c) Equation of motion of lower block is

$$F = \mu(M_A + M_B) \cdot g$$

$$\mu = \frac{F}{(M_A + M_B)g}$$

$$= \frac{49}{10 \times 9.8} = \frac{1}{2} = 0.5$$

10. (b) Given $R = 3 \text{ km} = 3000 \text{ m}$

Range, $R = u \sqrt{\frac{2h}{g}}$

$$\Rightarrow u = R \sqrt{\frac{g}{2h}} \text{ or } u = 3000 \times \sqrt{\frac{10}{2 \times 2000}}$$

$$= 3000 \times \frac{1}{20}$$

$$= 150 \text{ m/s}$$

$$= 150 \times \frac{18}{5} \text{ km/h}$$

$$= 540 \text{ km/h}$$

11. (b) Here, magnetic field, $B = 0.025 \text{ T}$

∴ Magnetic flux $\phi = B \cdot A = B \cdot \pi r^2$

Induced emf $|e| = \frac{d\phi}{dt}$

$$= B \pi 2r \cdot \frac{dr}{dt}$$

$$= 0.025 \times \pi \times 2 \times 2 \times 10^{-2} \times 1 \times 10^{-3}$$

$$= \pi \mu \text{ V}$$

12. (a) Increase in length

$$\Delta L = BO + OC - (BC)$$

$$= 2BO - 2BD$$

$$\Rightarrow \Delta L = 2BO - 2L$$

$$= 2[L^2 + x^2]^{\frac{1}{2}} - 2L$$

or $\Delta L = 2L \left[1 + \frac{x^2}{L^2} \right]^{\frac{1}{2}} - 2L$ [$\therefore$ using Binomial theorem]

$$\Rightarrow \Delta L \approx 2L \left[1 + \frac{1}{2} \frac{x^2}{L^2} - 1 \right]$$

$$= \frac{x^2}{L}$$

$$[\therefore x \ll L]$$

$$\therefore \text{Strain} = \frac{\Delta L}{2L}$$

$$= \frac{x^2}{2L} = \frac{x^2}{2L^2}$$

13. (d) We have, $R_t = R_0(1 + \alpha t)$

Here, $20 = R_0(1 + 20\alpha)$

$$60 = R_0(1 + 500\alpha)$$

$$\Rightarrow \frac{60}{20} = \frac{R_0(1 + 500\alpha)}{R_0(1 + 20\alpha)}$$

$$3 = \frac{1 + 500\alpha}{1 + 20\alpha}$$

$$\Rightarrow 3(1 + 20\alpha) = 1 + 500\alpha$$

$$\Rightarrow 3 + 60\alpha = 1 + 500\alpha$$

$$\Rightarrow 440\alpha = 2$$

$$\Rightarrow \alpha = \frac{2}{440} = \frac{1}{220} / ^\circ \text{C}$$

16 SELF STUDY GUIDE BITSAT

Also given $R_t = 25^\circ \text{C}$, $t = ?$

$$\text{Now, } \frac{20}{25} = \frac{R_0 \left(1 + \frac{20}{220}\right)}{R_0 \left(1 + \frac{t}{220}\right)}$$

$$4 \left(1 + \frac{t}{220}\right) = 5 \left(1 + \frac{20}{220}\right)$$

On solving,

$$t = 80^\circ \text{C}$$

14. (b) de-Broglie wavelength,

$$\lambda = \frac{h}{p} = \frac{h}{\sqrt{2mE}} = \frac{h}{\sqrt{2mqV}}$$

$$\Rightarrow \lambda = \frac{6.6 \times 10^{-34}}{\sqrt{2 \times 1.6 \times 10^{-19} \times 1.6 \times 10^{-19} \times 1000}}$$

$$\Rightarrow \lambda = \frac{6.6 \times 10^{-34}}{7.16 \times 10^{-22}} = 0.9 \times 10^{-12} \text{ m}$$

15. (c) Let the volume of ice-berg is V and its density is ρ . If this ice-berg floats in water with volume V_{in} inside it, then

$$V_{in}\sigma g = V\rho g$$

σ = density of water

$$\Rightarrow V_{in} = \left(\frac{\rho}{\sigma}\right) \cdot V$$

$$\begin{aligned} \Rightarrow V_{out} &= V - V_{in} \\ &= \left[\frac{\sigma - \rho}{\sigma}\right] V = \frac{1000 - 900}{1000} V \\ &= \frac{V}{10} \end{aligned}$$

$$\Rightarrow V_{out} / V = 0.1 = 10\%$$

16. (d) We have, Kinetic energy of electron,

$$K = \frac{Ze^2}{8\pi\epsilon_0 \cdot r}$$

also, Potential energy of electron,

$$U = -\frac{1}{4\pi\epsilon_0} \cdot \frac{Ze^2}{r}$$

$\therefore$ Total energy

$$\begin{aligned} E &= K + U \\ &= \frac{Ze^2}{8\pi\epsilon_0 \cdot r} - \frac{Ze^2}{4\pi\epsilon_0 \cdot r} \\ E &= -\frac{Ze^2}{8\pi\epsilon_0 r} \text{ or } K = -E = -(-3.4) \\ &= 3.4 \text{ eV} \end{aligned}$$

17. (c) Voltage gain $= \beta \times \text{impedance gain}$

$$\Rightarrow 50 = \beta \times \frac{200}{100}$$

$$\Rightarrow \beta = 25$$

Also power gain $= \beta^2 \times \text{impedance gain}$

$$= (25)^2 \times \frac{200}{100} = 1250$$

$$18. (d) T = \frac{2U_y}{g}$$

$$H = \frac{U_y^2}{2g}$$

and $R = U_x \times T$

When a horizontal acceleration is also given to the projectile U_y , T and H will remain unchanged while range will become

$$\begin{aligned} R' &= U_x \times T + \frac{1}{2} a T^2 \\ &= R + \frac{1}{2} \frac{g}{4} \left(\frac{4U_y^2}{g^2}\right) = R + H \quad \left[\because a = \frac{g}{4}\right] \end{aligned}$$

$$19. (b) \text{ We have, } \frac{P_1 V_1}{T_1} = \frac{P_2 V_2}{T_2}$$

$$\text{or } V_2 = \frac{P_1 V_1 T_2}{P_2 T_1}$$

$$= \frac{1 \times 500 \times (273 - 3)}{0.5 \times (273 + 27)} = \frac{1 \times 500 \times 270}{0.5 \times 300}$$

$$V_2 = 900 \text{ m}^3$$

20. (c) Intensity at centre of bright fringe,

$$I_0 = I + I + 2\sqrt{II} \cos 0$$

$$I_0 = 2I + 2I$$

$$= 4I$$

$$[\because \cos 0^\circ = 1]$$

Similarly Intensity at point $\frac{P}{4}$

(with phase difference $= \frac{2\pi}{4} = \frac{\pi}{2}$)

$$I' = I + I + 2\sqrt{II} \cos \frac{\pi}{2}$$

$$= 2I + 2\sqrt{II} \times 0$$

$$= 2I$$

$$\therefore \frac{I_0}{I'} = \frac{4I}{2I} = 2$$

21. (b) Let block is displaced through x m, then weight of displaced water or upthrust (upwards)

$$= -Axp g$$

Where, A is area of a cross-section of the block and ρ is density. This must be equal to force $(= ma)$ applied where m is mass of the block and a is acceleration.

$$\therefore ma = -Axp g$$

$$\text{or } a = -\frac{A\rho g}{m} x = -\omega^2 x$$

This is equation of SHM.

The time period of oscillation,

$$T = \frac{2\pi}{\omega} = 2\pi \sqrt{\frac{m}{A\rho g}}$$

$$\Rightarrow T \propto \frac{1}{\sqrt{A}}$$

22. (c) Resultant force

$$F' = \sqrt{F^2 + F^2 + 2FF \cos 120^\circ} = F \left[\because \cos 120^\circ = -\frac{1}{2} \right]$$

Now, from figure

$$F = \sqrt{F'^2 + F'^2 + 2F'F' \cos 90^\circ}$$

Now, the force normal to BC at vertex A is

$$F'' = \sqrt{F^2 - F'^2} = 0 \quad (\because F' = F)$$

23. (b) From the conservation principle,

$$mgh = \frac{1}{2} kX_0^2 - mgX_0$$

where, X_0 is maximum elongation in spring.

$$\Rightarrow \frac{1}{2} kX_0^2 - mgX_0 - mgh = 0$$

$$\Rightarrow X_0^2 - \frac{2mg}{k} X_0 - \frac{2mg}{k} h = 0$$

$$X_0 = \frac{\frac{2mg}{k} \pm \sqrt{\left(\frac{2mg}{k}\right)^2 + 4 \times \frac{2mg}{k} h}}{2}$$

Amplitude = elongation in spring for lowest extreme position

– elongation in spring for equilibrium position

$$= X_0 - X_1 = \frac{mg}{k} \sqrt{1 + \frac{2hk}{mg}} \quad \left[\because X_1 = \frac{mg}{k} \right]$$

24. (d) Fraction remains after n half-lives

$$\frac{N}{N_0} = \left(\frac{1}{2}\right)^n = \left(\frac{1}{2}\right)^{\frac{t}{T}}$$

$$\text{Given, } N = \frac{N_0}{e} \Rightarrow \frac{N_0}{eN_0} = \left(\frac{1}{2}\right)^{\frac{5}{T}}$$

$$\Rightarrow \frac{1}{e} = \left(\frac{1}{2}\right)^{\frac{5}{T}}$$

Taking log on both sides, we get

$$\log 1 - \log e = \frac{5}{T} \log \frac{1}{2}$$

$$\Rightarrow -1 = \frac{5}{T} (-\log 2)$$

$$\Rightarrow T = 5 \log_e 2$$

Now, let t' be the time after which activity reduces to half

$$\left(\frac{1}{2}\right) = \left(\frac{1}{2}\right)^{t'/5 \log_e 2}$$

$$\Rightarrow t' = 5 \log_e 2$$

25. (c) Focal length of combination

$$\frac{1}{f} = \frac{1}{f_1} + \frac{1}{f_2} \quad \dots(i)$$

Using lens maker's formula

$$\frac{1}{f_2} = (\mu_2 - 1) \left(\frac{1}{-R} - \frac{1}{\infty} \right) = -\frac{(\mu_2 - 1)}{R}$$

$$\frac{1}{f_1} = (\mu_1 - 1) \left(\frac{1}{\infty} - \frac{1}{-R} \right) = \frac{\mu_1 - 1}{R}$$

$$\text{or } \frac{1}{f_1} = \frac{(\mu_1 - 1)}{R}$$

$$\frac{1}{f_2} = -\frac{(\mu_2 - 1)}{R}$$

Putting these values in Eq (i), we get

$$\Rightarrow \frac{1}{f} = \frac{(\mu_1 - 1)}{R} - \frac{(\mu_2 - 1)}{R}$$

$$\Rightarrow \frac{1}{f} = \frac{(\mu_1 - 1 - \mu_2 + 1)}{R}$$

$$\Rightarrow \frac{1}{f} = \frac{\mu_1 - \mu_2}{R}$$

$$f = \frac{R}{(\mu_1 - \mu_2)}$$

26. (c) Current will flow only through the branch containing resistance R_2

$$\therefore i = \frac{E}{R_2 + r} = \frac{5}{4 + 1} = 1 \text{ A}$$

Potential difference across R_2

$$= 1 \times 4 = 4 \text{ V}$$

If q be the charge on each plate of capacitor, then

$$\frac{q}{C} + \frac{q}{C} = 4$$

18 SELF STUDY GUIDE BITSAT

or $\frac{2q}{c} = 4$

or $\frac{2q}{3 \times 10^{-6}} = 4$

$$q = 6 \mu\text{C}$$

27. (c) Friction force between A and B and between block B and surface S will oppose F

$$\begin{aligned} \therefore F &= F_{AB} + F_{BS} = \mu_{AB} M_A g + \mu_{BS} (m_A + m_B) g \\ &= 0.2 \times 100 \times 10 + 0.3(100 + 200) \times 10 \\ &= 200 + 900 = 1100 \text{ N} \end{aligned}$$

28. (a) The moment of inertia of the uniform rod about an axis through one end and perpendicular to its length is

$$= \frac{ml^2}{3}$$

where, m is the mass and l its length.

Torque ($\tau = I \cdot \alpha$) acting on centre of gravity of rod is given by

$$\tau = mg \frac{l}{2}$$

also, $\frac{ml^2}{3} \cdot \alpha = mg \frac{l}{2}$

$$\alpha = \frac{3g}{2l}$$

29. (a) As H-atom emits 6 spectral lines $\frac{n(n-1)}{2} = 6$

$$\therefore n = 4$$

$$\Delta E = E_4 - E_1 = 13.6 - 0.85$$

$$= 12.75 \text{ eV}$$

$$\lambda = \frac{1242 \text{ nm}}{12.75}$$

$$= 97.5 \text{ nm}$$

30. (a) Torque acting on equilateral triangle in a magnetic field B is

$$\tau = i AB \sin \theta$$

Area of triangle LMN ,

$$A = \frac{\sqrt{3}}{2} l^2 \text{ and } \theta = 90^\circ$$

Substituting the given values in expression for torque, we get

$$\tau = i \times \frac{\sqrt{3}}{2} l^2 B \sin 90^\circ$$

$$\tau = \frac{\sqrt{3}}{2} i l^2 B \quad (\because \sin 90^\circ = 1)$$

Here, $l = 2 \left(\frac{\tau}{\sqrt{3} Bi} \right)^{\frac{1}{2}}$

31. (d) Work done = Change in surface energy

$$r_2 = 5 \text{ cm}$$

$$r_1 = 3 \text{ cm}$$

$$\begin{aligned} \Rightarrow W &= 2T \times 4\pi(r_2^2 - r_1^2) \\ &= 2 \times 0.03 \times 4\pi [(5)^2 - (3)^2] \times 10^{-4} \\ &= 0.4\pi \text{ mJ} \end{aligned}$$

32. (c) From the figure, the X -component remains unchanged while the Y -component is reverse. Then, the velocity at point B is $(2\hat{i} - 3\hat{j}) \text{ m/s}$.

33. (b) $H = I^2 Rt$

$$\therefore \frac{H_1}{H_2} = \left(\frac{I_1}{I_2} \right)^2 \times \left(\frac{R_1}{R_2} \right)$$

$$\text{or } \frac{10}{H_2} = \left[\frac{1}{\left(\frac{1}{2} \right)} \right] \times \frac{5}{4}$$

$$H_2 = 2 \text{ cal}$$

34. (a) Given KE of α -particle = 2 eV

$$r = \frac{(Ze)(e)}{4\pi\epsilon_0 \cdot (\text{KE})}$$

$$= \frac{2Ze \times 9 \times 10^9}{2V}$$

$$\Rightarrow r = \frac{2 \times Z \times 16 \times 10^{-19} \times 9 \times 10^9}{2V}$$

$$= 14.4 \cdot \frac{Z}{V} \text{ \AA}$$

35. (c) According to question

$$n_1 T_1 = n_2 T_2$$

$$\Rightarrow n \cdot 2\pi \sqrt{\frac{5}{g}} = (n-1) 2\pi \sqrt{\frac{20}{g}}$$

$$\frac{n}{n-1} = 2 \Rightarrow n = 2$$

36. (c) The two capacitors formed are in parallel, hence capacitance of the combination

$$C = \frac{C_1 C_2}{C_1 + C_2} \quad \dots(i)$$

where, $C_1 = \frac{K_1 \epsilon_0 A}{\frac{d}{3}} \quad \left(\because C = \frac{\epsilon_0 A}{d} \right) \dots (ii)$

$$C_2 = \frac{K_2 \epsilon_0 A}{\frac{2d}{3}} \dots (iii)$$

$$C_{eq} = \frac{\frac{3K_1 \epsilon_0 A}{d} \times \frac{K_2 \epsilon_0 A \cdot 3}{2d}}{\frac{3K_1 \epsilon_0 A}{d} + \frac{3K_2 \epsilon_0 A}{2d}}$$

$$= \frac{9K_1 K_2 \epsilon_0^2 A^2}{2d^2} \times \frac{d}{\epsilon_0 A \times 18}$$

It is given

$\frac{2d/3}{K_1}$	$\frac{d/3}{K_2}$
--------------------	-------------------

$$\frac{\epsilon_0 A}{d} = 9 \text{ pF}$$

Using given values

$$C_{eq} = 40.5 \text{ pF}$$

37. (d) Acceleration

$$f = \frac{dv}{dt} = f_0 \left(1 + \frac{t}{T} \right)$$

or $dv = f_0 \left(1 + \frac{t}{T} \right) \cdot dt \dots (i)$

Integrating Eq. (i) on both sides, we get

$$v = f_0 t - \frac{f_0}{T} \cdot \frac{t^2}{2} + C \dots (ii)$$

After applying boundary conditions

$$v = 0 \text{ at } t = 0$$

We get, $C = 0$

$$\Rightarrow v = f_0 t - \frac{f_0}{T} \cdot \frac{t^2}{2} \dots (iii)$$

$$\text{As } f = f_0 \left(1 + \frac{t}{T} \right)$$

When $f_0 = 0$, $t = T$

Substituting $t = T$ in Eq. (iii), then velocity

$$v_x = f_0 T - \frac{f_0}{T} \cdot \frac{T^2}{2} = \frac{1}{2} f_0 T$$

38. (c) By Kepler's law of planetary motion,

$$T^2 \propto r^3, \text{ hence } T_1^2 \propto r_1^3$$

$$\text{Similarly } T_2^2 \propto r_2^3$$

$$\therefore T_1^2 \propto (36000)^3$$

$$T_2^2 \propto (6400 + h)^3$$

Therefore,

$$(T_2)^2 = T_1^2 \left(\frac{6400 + h}{36000} \right)^3$$

$$> T_1^2 \left[\frac{6400}{3600} \right]^3$$

$$> (24)^2 \left[\frac{8}{45} \right]^3$$

$$\therefore T_2 > \frac{24 \times 8 \times \sqrt{8}}{45 \times \sqrt{45}}$$

$$> 1.8 \text{ h}$$

$$\text{So, } T_2 \cong 2 \text{ h}$$

39. (b) Equation of wave,

$$y = 0.2 \sin [1.5x + 60t]$$

Comparing with standard equation, we get

$$y = A \sin [kx + \omega t]$$

$$k = 1.5 = \frac{2\pi}{\lambda}$$

and $\omega = 60 = \frac{2\pi}{T}$

$$\therefore \text{Velocity of wave, } v = \frac{\omega}{k}$$

$$= \frac{60}{1.5} = 40 \text{ m/s}$$

$$\text{Velocity of wave in stretched string, } v = \sqrt{\frac{T}{m}},$$

where, m is the linear density, T is tension in the string.

$$\text{So, } T = v^2 m = (40)^2 \times 3 \times 10^{-4}$$

$$= 0.48 \text{ N}$$

40. (b) Distance of straight path from O

$$= \frac{r}{\sqrt{2}}$$

$$\text{Hence, } B = B_1 + B_2$$

$$= \frac{\mu_0}{4\pi} \cdot \frac{2i}{\frac{r}{\sqrt{2}}} + \frac{\mu_0}{4\pi} \cdot \frac{2\pi i}{r} \left(\frac{1}{4} \right)$$

$$= \frac{\mu_0}{4\pi} \cdot \frac{2i}{r} \left[\sqrt{2} + \frac{\pi}{4} \right]$$

Chemistry

41. (b) $\because$ 4g of copper gave 5g of its oxide means,
1 g of oxygen combine with 4g of copper.

$\therefore$ Eq. wt of oxygen = 8,

Therefore,

8g of oxygen combine with = 4×8 g of copper = 32 g

Hence,

Equivalent weight of copper = 32

42. (b) Option (b) is the incorrect statement as reaction of NaBH_4 with cold water is very slow. It is not violent. All other are correct statements.

43. (b) $\because$ for s -subshell,

$$l = 0$$

Hence, orbital angular momentum of an electron is $2s$ orbital = zero.

$$\left[\because \text{orbital angular momentum} = \sqrt{l(l+1)} \cdot \frac{h}{2\pi} \right]$$

44. (b) I. Number of electrons in $\text{C}^+ \text{H}_3 = 6 + 3 - 1 = 8$

II. Number of electrons in $\text{NH}_2^- = 7 + 2 + 1 = 10$

III. Number of electrons in $\text{NH}_4^+ = 7 + 4 - 1 = 10$

IV. Number of electrons in $\text{NH}_3 = 7 + 3 = 10$

Since, species with same number of electrons are called isoelectronic species, Hence, IIInd, IIIrd and IVth are isoelectronic.

45. (a) $\because$ Difference of electronegativity between (A) and (B) = $3.0 - 1.2 = 1.8$ and, a bond having electronegativity difference greater than 1.65 is of ionic nature.

Hence, bond between (A) and (B) would be of ionic nature.

46. (c) The hydrogen, attached with sp -hybrid C-atom is most acidic because of highest electronegativity of sp hybrid carbon atom, H atom becomes relatively more acidic.

47. (a) Reductive ozonolysis of $(\text{CH}_3)_2 \text{C} = \text{CH}(\text{CH}_3)_2$ followed by hydrolysis gives only one type of ketones because of symmetry across the $\text{C} = \text{C}$ and bonding of two same alkyl groups (CH_3) with both the carbons bonded through double bond.

48. (d) Reaction (I), (II) and (IV) are of exothermic nature, thus do not involve absorption energy.

49. (b) More be the ability of N-atom of $-\text{NH}_2$ group to donate lone pair of electrons to HCl (dil.), more be the reactivity of amine.

In (b) two alkyl groups are attached to the $-\text{NH}_2$ (having electron releasing nature) which increases the electron donating ability of N-atom of $-\text{NH}_2$.

Hence is most reactive.

Note

50. (d) Block of magnesium prevents the action of water and salt of iron (of ship) by sacrificing itself.

This is method of protection of ship (i.e. of iron), known as sacrificial protection,

51. (d) $\because$ Only one mole of total gases are evolved and H_2O decomposes as

i.e. total moles = $1 + \frac{1}{2} = \frac{3}{2}$ moles by one mole of H_2O

Now,

$\therefore \frac{3}{2}$ moles of gases are evolved by = 1 mole of H_2O

$\therefore$ 1 mole of gases are evolved by = $\frac{1}{3/2} = \frac{2}{3}$

Hence, 1 mole of total gases are evolved by $\frac{2}{3}$ mole of H_2O .

52. (b) $\because$ Reaction between Fe and HCl is as follows

n (moles of Fe) = n (moles of HCl)

$n(\text{Fe}) = \text{Normality}(\text{HCl}) \times \text{Volume of HCl}$

$$n(\text{Fe}) = \frac{0.4 \times 500}{1000} = 0.2 \text{ moles}$$

As each Fe consumers 2 electrons to change to Fe^{2+} ion.

$\therefore$ Number of Fe^{2+} ions produced = $\frac{0.2}{2} = 0.1$ mole

53. (c) For dissolution hydration energy must be more higher (–ve) value than of lattice energy. Thus, (c) is the correct answer.

54. (d) In the given reaction the end product is (d). It is obtained as follows.

55. (d) Conversion of carbonate are into its oxide (by heating in absence of air) is known as calcination.

∴ (d) is the correct answer i.e.

56. (c) We know that, $\Delta H = E_f - E_b$

where, E_b & E_f = activation energy for backward and forward respectively.

Thus, $E_f = \Delta H + E_b$, means $E_f > \Delta H$.

57. (a) Ag is leached by cyanide process by making the complex using NaCN/KCN as follows

58. (a) Among the given option (a) is a diamagnetic complex.

(a) $[\text{Co}(\text{NH}_3)_6]^{3+} \Rightarrow \text{Co} (27) \Rightarrow \text{Co}^{3+} = 3d^6 4s^0$. Thus, has no unpaired electrons and is a diamagnetic complex.

(b) $[\text{NiCl}_4]^{2-} \Rightarrow \text{Ni} (28) \Rightarrow \text{Ni}^{2+} = 3d^8 4s^0$

Thus, has two unpaired electrons is paramagnetic.

(c) $[\text{CuCl}_4]^{2-} \Rightarrow \text{Cu} (29) \Rightarrow \text{Cu}^{2+} = 3d^9 4s^0$

Thus, has one unpaired electrons and is paramagnetic.

(d) $[\text{Fe}(\text{H}_2\text{O})_6]^{3+} \Rightarrow \text{Fe} (26) \Rightarrow \text{Fe}^{3+} = 3d^5 4s^0$

Thus, has five unpaired electrons and is paramagnetic.

59. (b) Neoprene is a synthetic rubber. It is a polymer of chloroprene (2-chlorobuta,1, 3 diene).

60. (a) Ionic solids have highest melting point due to strong electrostatic force of attraction.

61. (d) Night blindness is developed due to deficiency of vitamin-A.

62. (a) The transfer RNA anticodon for messenger RNA codon G – C – A is

C – G – U, because in anticodon of RNA,

G replaced by C

C replaced by G

A replaced by U

63. (a) % for CO_2

∴ 0.765 g of acid gives $\text{CO}_2 = 0.535 \text{ g}$

∴ 100 g of acid gives $\text{CO}_2 = \frac{0.535 \times 100}{0.765}$

% of $\text{CO}_2 = 70.00$

% for carbon

∴ 44 g of CO_2 gives, C = 12 g

∴ 70 g of CO_2 gives, C = $\frac{12 \times 70}{44}$

= 19.09 g

∴ % of carbon = 19.00

Similarly,

(i) for hydrogen

% of H_2O

$$\Rightarrow \frac{0.138 \times 100}{0.765}$$

= 18.03 = 18.00

% of Hydrogen

$$\Rightarrow \frac{2 \times 18}{18} = 2.00$$

Hence ratio of carbon and hydrogen is 19 : 2

64. (d) Least basic has maximum value of pK_b .

Since, in (d), lone pair of electrons over N-atom are delocalised to two benzene rings, thus is least basic.

65. (c) ∴ for (l) It can be upto $(n - 1)$ and

Thus, $m = \pm l$, i.e. + l, 0, – l

for (a) $n = 2$, $l = 0$, $m = 0$ (correct),

for (b) $n = 1$, $l = 0$, $m = 0$ (correct),

(c) $n = 3$, $l = 3$, (not correct),

(d) $n = 2$, $l = 1$, $m = 1$ (correct),

66. (d) More higher be the (+) ve oxidation number of N-atom in its oxide more acidic be the nature of oxide. Thus N_2O_5 is most acidic oxide.

67. (c) ∴ Bond order (BO) = $\frac{N_b - N_a}{2}$

Thus,

$$\text{for } \text{O}_2, \text{BO} = \frac{10 - 6}{2} = 2$$

$$\text{for } \text{O}_2^-, \text{BO} = \frac{10 - 7}{2} + 1.5$$

$$\text{for } \text{O}_2^+, \text{BO} = \frac{10 - 5}{2} = 2.5$$

$$\text{for } \text{O}_2^{2-}, \text{BO} = \frac{10 - 8}{2} = 1.0$$

Hence maximum value for BO is for O_2^+ .

68. (c) Option (c) is the correct option as in (i), (ii) and (iv) the state changes towards more random state, thus entropy increases.

69. (a) BF_3 is a Lewis acid, as it accepts lone pair of electrons.

It is not an Arrhenius acid because it does not furnish H^+ ion in its aqueous solution.

It is also not a Bronsted Lowry acid as it does not give H^+ ions in any solvent.

70. (a) $\therefore \Delta H = \Delta E + \Delta n g R T$
and Δn (for the given reaction) = $2 - 1 = +1$
 $\therefore \Delta H > \Delta E$
71. (d) First member of 1st group i.e. lithium, mostly form covalent compounds due to its small size and comparatively high I.E. (with respect to other members of its group).
72. (b) When aqueous solution of borax ($\text{Na}_2\text{B}_4\text{O}_7$) is acidified with HCl, we get H_3BO_3 and NaCl as follows
- $$\text{Na}_2\text{B}_4\text{O}_7 + 2\text{HCl} + 5\text{H}_2\text{O} \longrightarrow 2\text{NaCl} + 4\text{H}_3\text{BO}_3$$
- BoroxBoric acid
73. (d) An aromatic compound can follow Huckel's rule if it has $(4n + 2)\pi$ -electrons
where, n = integer 0, 1, 2, 3, ... etc.
Thus,
(a) $n = 0$; $4 \times 0 + 2 = 2\pi$
 $\therefore$ follow Huckel's rule
(b) $n = 1$; Number of π -electrons = 6
 $\therefore$ follows Huckels rules.
(c) $n = 1$; Number of π -electrons = 6
 $\therefore$ follows Huckel's rule.
(d) $n = 1$, Number of π -electrons = 8
 $(4n + 2 = 4 \times 1 + 2 = 6)$
but this compound has 8 electrons which distorts the plane and hence does not follows Huckel's rule.
74. (b) According to Arrhenius equation's
$$\log K = \log A - \frac{E_a}{2.303 R T}$$

on comparing it with the equation of st. line $y = mx + c$ plot (b) is the correct answer.
75. (d) $\therefore \text{CN}^-$ is a strong ligand and from six Coordinats bonds with Fe-elements. Thus Fe show d^2sp^3 hybriisation in $\text{K}_3\text{Fe}(\text{CN})_6$.
76. (d) More be the number of unpaired electrons $\rightarrow$ more be the magnetic moment.
and
Number of unpaired electrons in $\text{Mg}^{2+} = 0$
Number of unpaired electrons in $\text{Ti}^{3+} = 1$

Number of unpaired electrons in $\text{Fe}^{2+} = 4$

Thus, Fe^{2+} show maximum value of magnetic moment (μ).
also, $\mu = \sqrt{n(n+2)}$. BM (n = Number of unpaired electrons).

- 77.** (a) $\therefore$ Elements with atomic Number 90 to 103 belongs to same group, i.e. III-B 3rd group (i.e. actinoids)

- 78. (c)**

- 79.** (d) $\therefore n = \frac{10}{m}$ (actual mass) (molar mass)

for

$$(a) \ n = \frac{w}{m} = \frac{8}{16} = \frac{1}{2} \text{ mole}$$

$$(b) \ n = \frac{16}{32} = \frac{1}{2} \text{ mole}$$

$$(c) \ n = \frac{14}{28} = \frac{1}{2} \text{ mole}$$

- (d) Thus, all have same number of moles.

- 80. (d)** $\because$ For ideal gas

$$pV = nRT$$

or $T = \frac{pV}{nR}$

$$\therefore n = 1 = \text{constant}$$

$$R = 0.083 = \text{constant}$$

$$\therefore T \propto pV$$

Thus,

The gas that shows highest product of $p \times V$, has highest temperature.

for (A) $p \times V = 1 \times 5 = 5$

(B) $p \times V = 2 \times 2.5 = 5$

(C) $p \times V = 2 \times 1.25 = 2.5$

(D) $p \times V = 2.5 \times 2.5 = 6.25$

Hence gas (D) show highest temperature.

English Proficiency

81. (b) 'Are' should be used in place of 'is'.
82. (b) 'Was' should be used in place of were.
83. (b) Luggage should be used in place of luggages.
84. (c) *Gloss over something* is used.
85. (b) Preposition *up* is used with muster.
86. (b) **Illusion** means a false idea or belief; a deceptive appearance or impression. Its antonym will be **reality**
87. (b) **Disparage** means to criticise someone in a way that shows that you do not respect or value him. Its antonym will be **praise**
88. (b) **Slackened** means reduce or decrease in speed or intensity. Its antonym will be **quickened**.

Logical Reasoning

96. (c) 'Leather' is a raw material used to make 'Shoes'. Same as, 'Rubber' is made using 'Latex' which is a raw material.
97. (d) Here, $81 \times 3 = 243$
 $25 \times 3 = 75$
 $64 \times 3 = 192$
 but $16 \times 4 = 64$
 We can see that in all options second number is three times the first number except 16 : 64.
 Hence, 16 : 64 is odd one.

98. (a) The sequence to given series is as follows

Hence, 219 will come in place of question mark '?'.

99. (d) From given information, we have
 Lakshmi > Meenu ... (i)
 Lakshmi > Leela > Meenu ... (ii)

89. (b) **Deteriorating** means becoming progressively worse worsening.
90. (b) **Stalemate** means a situation in which neither group involved in an argument or an act can win or get an advantage and no action can be taken.
91. (b) The answer is clear from the second paragraph of the passage.
92. (d) The answer is clear from the sentence Designed to demonstrate the damage alcohol can do
93. (d) The answer is clear from the sentence who came to him had not realised how much they were drinking
94. (a) The answer is clear from the sentence 'Almost everyone poured out not a single measure, but a double at least
95. (c) The answer is clear from the first sentence of the last paragraph.

Meenu > Hari > Latha ... (iii)

After arranging the equations,

Lakshmi > Leela > Meenu > Hari > Latha

∴ Latha is the youngest.

100. (a) Here, all the three equal parts have same design. So, we can obtain the answer figure for the missing portion by rotating question figure by 90° clockwise.
 Hence, option(a) is the right answer.
101. (a) Out of five given figures, we can take figure (A), (C) and (D) to make a square.
102. (b) After folding, paper step, by step and then cut as shown in the question, it will show as an option (b).
103. (c) Moving row wise the number of horizontal lines increases by one in each step continuing the process, we will get figure of option (c) which will replace the question mark '?'.
104. (c) Required figure given in option (c).
105. (a) There are 28 triangles in the given figure.

Mathematics

106. (c) $(1+x)^{21} + (1+x)^{22} + \dots + (1+x)^{30}$
 $= (1+x)^{21} [1 + (1+x)^1 + \dots + (1+x)^9]$
 $= (1+x)^{21} \left[\frac{(1+x)^{10} - 1}{(1+x) - 1} \right]$
 $= \frac{1}{x} [(1+x)^{31} - (1+x)^{21}]$

∴ Coefficient of x^5 in the given expression

$$= \text{Coefficient of } x^5 \text{ in } \frac{1}{x} [(1+x)^{31} - (1+x)^{21}]$$

$$= \text{Coefficient of } x^6 \text{ in } [(1+x)^{31} - (1+x)^{21}]$$

$$= {}^{31}C_6 - {}^{21}C_6$$

24 SELF STUDY GUIDE BITSAT

107. (b) We have,

$$\begin{aligned}\arg(z-1) &= \arg(z+3i) \\ \Rightarrow \arg((a-1)+ib) &= \arg(a+(b+3)i) \\ \Rightarrow \tan^{-1}\left(\frac{b}{a-1}\right) &= \tan^{-1}\left(\frac{b+3}{a}\right) \\ \Rightarrow \frac{b}{a-1} &= \frac{b+3}{a} \\ \Rightarrow ab &= (a-1)(b+3) \\ \Rightarrow 3(a-1) &= b \\ \Rightarrow (a-1):b &= 1:3\end{aligned}$$

108. (a) Let the ellipse be $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$

$$\text{and let } \frac{x \cos \theta}{a} + \frac{y \sin \theta}{b} = 1 \quad \dots(i)$$

be a tangent to it at point $(a \cos \theta, b \sin \theta)$. Then, p = length of the perpendicular from $S(ae, 0)$ on Eq. (i)

$$\Rightarrow p = \left| \frac{e \cos \theta - 1}{\sqrt{\frac{\cos^2 \theta}{a^2} + \frac{\sin^2 \theta}{b^2}}} \right|$$

p' = length of the perpendicular from $O(0, 0)$ on Eq. (i)

$$\Rightarrow p' = \left| \frac{1}{\sqrt{\frac{\cos^2 \theta}{a^2} + \frac{\sin^2 \theta}{b^2}}} \right|$$

$$\text{and } r = ae \cos \theta - a$$

$$\text{Clearly, } rp' = ap$$

109. (a) We have,

$$\begin{aligned}\sum_{r=1}^{10} r \cdot \frac{{}^nC_r}{{}^nC_{r-1}} &= \sum_{r=1}^{10} (n-r+1) \\ \Rightarrow \sum_{r=1}^{10} r \cdot \frac{{}^nC_r}{{}^nC_{r-1}} &= \sum_{r=1}^{10} \{(n+1)-r\} \\ \Rightarrow \sum_{r=1}^{10} r \cdot \frac{{}^nC_r}{{}^nC_{r-1}} &= 10(n+1) - \sum_{r=1}^{10} r \\ \Rightarrow \sum_{r=1}^{10} r \cdot \frac{{}^nC_r}{{}^nC_{r-1}} &= 10(n+1) - 55 \\ &= 10n - 45 = 5(2n-9)\end{aligned}$$

110. (d) Since, $3^{2 \sin 2\alpha - 1}$, 14 and $3^{4 - 2 \sin 2\alpha}$ are in AP. Therefore,

$$\begin{aligned}2 \times 14 &= 3^{2 \sin 2\alpha - 1} + 3^{4 - 2 \sin 2\alpha} \\ \Rightarrow 28 &= \frac{a}{3} + \frac{3^4}{a}, \text{ where } a = 3^{2 \sin 2\alpha} \\ \Rightarrow a^2 - 84a + 243 &= 0 \\ \Rightarrow (a-81)(a-3) &= 0 \\ \Rightarrow a &= 81, a = 3 \\ \Rightarrow 3^{2 \sin 2\alpha} &= 3^4 \text{ or } 3^{2 \sin 2\alpha} = 3 \\ \Rightarrow 2 \sin 2\alpha &= 1 \quad [\because 2 \sin 2\alpha \neq 4]\end{aligned}$$

$$\Rightarrow \sin 2\alpha = \frac{1}{2} \Rightarrow 2\alpha = 30^\circ \quad [\because \sin 30^\circ = 1/2]$$

Thus, the first three terms of the AP are 1, 14, 27.

$$\begin{aligned}\text{Hence, its fifth term } a_5 &= a_1 + (5-1)d \\ &= 1 + 4 \times 13 = 1 + 52 = 53\end{aligned}$$

111. (c) Let α, α^2 be the roots of $3x^2 + px + 3$

$\therefore$ Product of the roots,

$$\alpha \cdot \alpha^2 = 1 \Rightarrow \alpha^3 = 1$$

$$\Rightarrow \alpha = 1, \omega, \omega^2$$

$$\text{Again, } \alpha + \alpha^2 = -\frac{p}{3}$$

$$\Rightarrow 1 + 1 = -\frac{p}{3} \quad (\text{if } \alpha = 1)$$

$$\Rightarrow p = -6$$

But $p > 0$

$\therefore \alpha = 1$ is not possible.

$$\text{If } \alpha = \omega, \text{ then } \alpha + \alpha^2 = \omega + \omega^2 = -1$$

$$\therefore -1 = -\frac{p}{3} \Rightarrow p = 3$$

Again, if $\alpha = \omega^2$, then

$$\alpha + \alpha^2 = \omega^2 + \omega^4 = \omega^2 + \omega = -1$$

$$\therefore -1 = -\frac{p}{3}$$

$$\Rightarrow p = 3$$

112. (d) We have,

$$\begin{aligned}\log_{140} 63 &= \log_{2^2 \times 5 \times 7} (3 \times 3 \times 7) \\ &= \frac{\log_2 (3 \times 3 \times 7)}{\log_2 (2^2 \times 5 \times 7)} = \frac{\log_2 3 + \log_2 3 + \log_2 7}{2 \log_2 2 + \log_2 5 + \log_2 7} \\ &= \frac{2a + \frac{1}{c}}{2 + b + \frac{1}{c}} = \frac{2ac + 1}{2c + bc + 1}\end{aligned}$$

113. (a) Given that, $\cos(x-y)$, $\cos x$, $\cos(x+y)$ are in HP.

$$\text{Then, } \cos x = \frac{2 \cos(x-y) \cos(x+y)}{\cos(x-y) + \cos(x+y)}$$

$$\Rightarrow \cos x = \frac{2(\cos^2 x - \sin^2 y)}{2 \cos x \cos y}$$

$$\Rightarrow \cos^2 x \cos y = \cos^2 x - \sin^2 y$$

$$\Rightarrow \cos^2 x (\cos y - 1) = -\sin^2 y$$

$$\Rightarrow \cos^2 x (1 - \cos y) = 1 - \cos^2 y$$

$$\Rightarrow \cos^2 x (1 - \cos y) = (1 - \cos y)(1 + \cos y)$$

$$\Rightarrow \cos^2 x = 1 + \cos y \Rightarrow \cos^2 x = 2 \cos^2 y / 2$$

$$\Rightarrow \cos^2 x \sec^2(y/2) = 2$$

$$\Rightarrow \cos x \sec(y/2) = \pm \sqrt{2}$$

114. (c) We first write the elements of the set R .

$$\text{i.e. } R = \{(1, 4), (4, 1), (2, 3), (3, 2)\}$$

Since, $(1, 1) \notin R \Rightarrow R$ is not reflexive.

Now as, $(1, 4) \in R \Rightarrow (4, 1) \in R$ and $(2, 3) \in R$

$\Rightarrow (3, 2) \in R$

So, R is symmetric

Now, $(1, 4) \in R$ and $(4, 1) \in R$

$\nRightarrow (1, 1) \in R$

Thus, R is not transitive.

Hence, R is symmetric but neither reflexive nor transitive.

- 115.** (c) Any number between 1 to 999 is of the form abc when $0 \leq a, b, c \leq 9$. Let us first count the number in which 5 occurs exactly once.

Since, 5 can occur at one place in $1 \times {}^3C_1 \times 9 \times 9 = 243$ ways, next 5 can occur in exactly two places in ${}^3C_2 \times 9 = 27$. Lastly, 5 can occur in all three digits in only one way.

Hence, the number of times 5 occurs

$$= 1 \times 243 + 27 \times 2 + 1 \times 3 \\ = 243 + 54 + 3 = 300$$

- 116.** (a) Given, that, $A \cup X = B \cup X$

$$\Rightarrow A \cap (A \cup X) = A \cap (B \cup X)$$

$$\Rightarrow (A \cap A) \cup (A \cap X) = (A \cap B) \cup (A \cap X)$$

[Using distributive law]

$$\Rightarrow A \cup \phi = (A \cap B) \cup \phi [\because A \cap X = \phi]$$

$$\Rightarrow A = A \cap B \quad \dots(i)$$

Again, consider $A \cup X = B \cup X$

$$\Rightarrow B \cap (A \cup X) = B \cap (B \cup X)$$

$$\Rightarrow (B \cap A) \cup (B \cap X) = (B \cap B) \cup (B \cap X)$$

$$\Rightarrow (B \cap A) \cup \phi = B \cup \phi [B \cap X = \phi]$$

$$\Rightarrow A \cap B = B \quad \dots(ii)$$

Thus from Eq. (i) and (ii), we get

$$A = B$$

- 117.** (d) $f(x) = x|x| = \begin{cases} x^2, & x \geq 0 \\ -x^2, & x < 0 \end{cases}$

Since, $-1 \leq x \leq 1$, therefore $-1 \leq f(x) \leq 1$

$\therefore$ Function is one-one and onto.

- 118.** (b) We have,

$$\begin{aligned} \sin x - 3 \sin 2x + \sin 3x &= \cos x - 3 \cos 2x + \cos 3x \\ \Rightarrow \sin x + \sin 3x - 3 \sin 2x &= \cos x + \cos 3x - 3 \cos 2x \\ \Rightarrow 2 \sin 2x \cos x - 3 \sin 2x - 2 \cos 2x \cos x + 3 \cos 2x &= 0 \\ \Rightarrow \sin 2x (2 \cos x - 3) - \cos 2x (2 \cos x - 3) &= 0 \end{aligned}$$

$$\Rightarrow (\sin 2x - \cos 2x) (2 \cos x - 3) = 0$$

$$\Rightarrow \sin 2x = \cos 2x \quad [\because \cos x \neq 3/2]$$

$$\Rightarrow 2x = 2x\pi \pm \left(\frac{\pi}{2} - 2x\right)$$

$$\Rightarrow x = \frac{n\pi}{2} + \frac{\pi}{8} \quad [\because \text{neglect -ve sign}]$$

- 119.** (b) The third side is parallel to a bisector of the angle between equal sides.

The bisectors are $7x - y + 3 = \pm 5(x + y - 3)$

$$\Rightarrow 2x - 6y + 18 = 0$$

$$\text{or } 12x + 4y - 12 = 0$$

$$\Rightarrow x - 3y + 9 = 0$$

$$\text{or } 3x + y - 3 = 0$$

Let the third side be $x - 3y = k$ or $3x + y = L$

It passes through $(1, -10)$.

$$k = 31, L = -7$$

Hence, required lines are $x - 3y = 31, 3x + y = -7$

- 120.** (d) Let (t, m) be the other end of the chord drawn from the point (p, q) on the circle

$$x^2 + y^2 = px + qy$$

Their mid-point is $\left(\frac{t+p}{2}, \frac{m+q}{2}\right)$

Since, mid-point lies on X-axis i.e. $y = 0$

$$m + q = 0 \quad \dots(i)$$

Also, (t, m) lies on the circle.

$$\therefore t^2 + m^2 - pt - qm = 0 \quad \dots(ii)$$

From Eqs. (i) and (ii), we get $t^2 - pt + 2q^2 = 0$

Which is quadratic in t such that, Discriminant > 0

$$\Rightarrow p^2 - 8q^2 > 0 \Rightarrow p^2 > 8q^2$$

- 121.** (a) Let P be the foot of the perpendicular drawn from $A(2, 3, 4)$ to the given line l .

$$\text{Then, } \frac{x-4}{-2} = \frac{y}{6} = \frac{z-1}{-3}$$

Now, any point on the line l is given by

$$x = 4 - 2\lambda, y = 6\lambda, z = 1 - 3\lambda$$

The coordinates of P are $(4 - 2\lambda, 6\lambda, 1 - 3\lambda)$

The direction ratios of AP are

$$(4 - 2\lambda - 2, 6\lambda - 3, 1 - 3\lambda - 4)$$

$$\text{i.e. } (2 - 2\lambda, 6\lambda - 3, -3 - 3\lambda)$$

And the direction ratios of l are $-2, 6$ and -3 .

Given, $AP \perp l$

$$\therefore -2(2 - 2\lambda) + 6(6\lambda - 3) - 3(-3 - 3\lambda) = 0$$

$$\Rightarrow \lambda = \frac{13}{49}$$

$$\therefore AP^2 = (4 - 2\lambda - 2)^2 + (6\lambda - 3)^2 + (1 - 3\lambda - 4)^2 \\ = 22 - 26\lambda + 49\lambda^2$$

Put $\lambda = \frac{13}{49}$, we get

$$AP^2 = \frac{909}{49} \Rightarrow AP = \frac{3}{7}\sqrt{101}$$

122. (c) Let $P(1, 6, 3)$ be the given point and L be the foot of perpendicular from P to the given line. The coordinates of a general point on the given line are

$$\frac{x-0}{1} = \frac{y-1}{2} = \frac{z-2}{3} = \lambda \text{ (say)}$$

i.e. $x = \lambda$

$$y = 2\lambda + 1, \quad z = 3\lambda + 2$$

If the coordinates of L are $(\lambda, 2\lambda + 1, 3\lambda + 2)$, then the direction ratios of PL are $(\lambda - 1, 2\lambda - 5, 3\lambda - 1)$.

Since, the direction ratios of given line which is perpendicular to PL , are 1, 2 and 3. Therefore, $(\lambda - 1)1 + (2\lambda - 5)2 + (3\lambda - 1)3 = 0$, which gives $\lambda = 1$.

Hence, coordinates of L are $(1, 3, 5)$.

Let $Q(x_1, y_1, z_1)$ be the image of $P(1, 6, 3)$ in the given line. Then, L is the mid-point of PQ .

$$\text{Therefore, } \frac{x_1 + 1}{2} = 1, \frac{y_1 + 6}{2} = 3, \frac{z_1 + 3}{2} = 5$$

$$\Rightarrow x_1 = 1, y_1 = 0, z_1 = 7$$

Hence, the image of $(1, 6, 3)$ in the given line is $(1, 0, 7)$.

123. (a) Given equation of plane is $x + y + z = 5$.

The distance measured along the line $x = y = z$.

Direction ratios of the given line is $(1, 1, 1)$.

So, the equation of line PQ is

$$\frac{x-1}{1} = \frac{y+5}{1} = \frac{z-9}{1} = \lambda$$

$$\Rightarrow x = \lambda + 1, y = \lambda - 5, z = \lambda + 9$$

lies on the plane $x + y + z = 5$

$$\therefore (\lambda + 1) - (-\lambda + 5) + (\lambda + 9) = 5$$

$$\Rightarrow \lambda = -10$$

The coordinate of Q is $(-9, -15, -1)$ and the coordinate of P is $(1, -5, 9)$

$$PQ = \sqrt{(10)^2 + (10)^2 + (10)^2} = 10\sqrt{3}$$

$$\therefore 2\sqrt{3}k = 10\sqrt{3} \Rightarrow k = 5$$

124. (b) $\lim_{n \rightarrow \infty} \sin \left\{ n\pi \left(1 + \frac{1}{n^2} \right)^{1/2} \right\}$
- $$= \lim_{n \rightarrow \infty} \sin \left\{ n\pi \left(1 + \frac{1}{2n^2} - \frac{1}{8n^4} + \dots \right) \right\}$$
- $$= \lim_{n \rightarrow \infty} \sin \left\{ n\pi + \frac{\pi}{2n} - \frac{\pi}{8n^3} + \dots \right\}$$
- $$= \lim_{n \rightarrow \infty} (-1)^n \sin \pi \left(\frac{1}{2n} - \frac{1}{8n^3} + \dots \right) = 0$$

$$125. (b) f(x) = \begin{cases} e^x, & x \leq 0 \\ 1-x, & 0 < x \leq 1 \\ x-1, & x > 1 \end{cases}$$

$$Rf'(0) = \lim_{h \rightarrow 0} \frac{f(0+h) - f(0)}{h} = \lim_{h \rightarrow 0} \left[\frac{h-1}{h} \right] = -1$$

$$Lf'(0) = \lim_{h \rightarrow 0} \frac{f(0-h) - f(0)}{-h} = \lim_{h \rightarrow 0} \frac{e^{-h} - 1}{-h} = 1$$

So, it is not differentiable at $x = 0$.

Similarly, it is not differentiable at $x = 1$ but it is continuous at $x = 0$ and 1 .

$$126. (b) \because \lim_{x \rightarrow 0} f(x) = f(0)$$

Let a be any point

$$\text{Now, at } x = a, \lim_{x \rightarrow a} f(x) = \lim_{h \rightarrow 0} f(a+h)$$

$$= \lim_{h \rightarrow 0} f(a) + \lim_{h \rightarrow 0} f(h)$$

$$= f(a) + f(0) = f(a+0) = f(a)$$

$\therefore f(x)$ is continuous at $x = a$, where a is any arbitrary point.

Hence, $f(x)$ is continuous for all x .

127. (a) Since, $x, \sin^{-1} x, \tan^{-1} x$ are continuous functions, so the function f is clearly continuous at each point of its domain except possibly at $x = 0$.

So, for f to be continuous at $x = 0$

$$f(0) = \lim_{x \rightarrow 0} f(x) = \lim_{x \rightarrow 0} \frac{2 - \frac{\sin^{-1} x}{x}}{2 + \frac{\tan^{-1} x}{x}} = \frac{1}{3}$$

$$\left[\because \lim_{x \rightarrow 0} \frac{\sin^{-1} x}{x} = 1, \lim_{x \rightarrow 0} \frac{\tan^{-1} x}{x} = 1 \right]$$

128. (b) The given function is

$$f(x) = \begin{cases} 0, & 0 \leq x < 1 \\ 1, & 1 \leq x < 2 \end{cases}$$

$$\text{Now, LHD} = \lim_{x \rightarrow 1^-} \frac{f(x) - f(1)}{x - 1} = \lim_{x \rightarrow 1^-} \frac{0 - 1}{x - 1}$$

Which does not exist

$\therefore f$ is not derivable at $x = 1$.

129. (b) Given, $f(x) = -2x^3 + 21x^2 - 60x + 41$... (i)

On differentiating Eq. (i) w.r.t. x , we get

$$f'(x) = -6x^2 + 42x - 60$$

$$= -6(x^2 - 7x + 10) = -6(x-2)(x-5)$$

If $x < 2$, $f'(x) < 0$, i.e., $f(x)$ is decreasing, then

$$f'(x) < 0 \text{ for } x < 2$$

130. (d) Rolle's theorem is not applicable for the function

$$f(x) = |x| \text{ in } [-1, 1]$$

$\therefore f'(0)$ does not exist.

131. (b) Clearly, the point of intersection of curves is (0, 1).

Now, slope of tangent of first curve

$$m_1 = \frac{dy}{dx} = a^x \log a$$

$$\Rightarrow \left(\frac{dy}{dx} \right)_{(0,1)} = m_1 = \log a$$

Slope of tangent of second curve,

$$m_2 = \frac{dy}{dx} = b^x \log b$$

$$\Rightarrow m_2 = \left(\frac{dy}{dx} \right)_{(0,1)} = \log b$$

$$\therefore \tan \alpha = \frac{m_1 - m_2}{1 + m_1 m_2} = \frac{\log a - \log b}{1 + \log a \log b}$$

132. (d) We have, $\int_0^n [x] dx$

$$\begin{aligned} &= \int_0^1 0 dx + \int_1^2 1 dx + \int_2^3 2 dx + \dots + \int_{n-1}^n (n-1) dx \\ &= 1(2-1) + 2(3-2) + 3(4-3) + \dots + (n-1)\{n-(n-1)\} \\ &= 1 + 2 + 3 + \dots + (n-1) = \frac{n(n-1)}{2} \end{aligned}$$

$$\text{and } \int_0^n \{x\} dx = \int_0^n (x - [x]) dx = \frac{n}{2}$$

$$\therefore \frac{\int_0^n [x] dx}{\int_0^n \{x\} dx} = n - 1$$

133. (b) Given, $f(x) = x + \sin 2x$

$$\Rightarrow f'(x) = 1 + 2 \cos 2x$$

For maximum or minimum value, $f'(x) = 0$

$$\Rightarrow 1 + 2 \cos 2x = 0 \Rightarrow \cos 2x = -\frac{1}{2}$$

$$\Rightarrow 2x = 2n\pi \pm \frac{2\pi}{3}$$

$$\Rightarrow x = n\pi \pm \frac{\pi}{3}$$

$$\Rightarrow x = \frac{4\pi}{3}, \frac{2\pi}{3}, \frac{5\pi}{3}$$

$$\text{Find } f(0), f\left(\frac{2\pi}{3}\right), f\left(\frac{4\pi}{3}\right), f\left(\frac{5\pi}{3}\right), f(2\pi)$$

$$\Rightarrow f(0) = 0, f\left(\frac{2\pi}{3}\right) = \frac{2\pi}{3} - 0.8$$

$$\Rightarrow f\left(\frac{4\pi}{3}\right) = \frac{4\pi}{3} + 0.8, f\left(\frac{5\pi}{3}\right) = \frac{5\pi}{3} - 0.8$$

$$\Rightarrow f(2\pi) = 2\pi + 0 = 2\pi$$

$\therefore$ Maximum value of $f(x) = 2\pi$.

134. (b) Required area = $\int_0^{\pi/2} |\cos x - \sin x| dx$

$$= \int_0^{\pi/4} (\cos x - \sin x) dx + \int_{\pi/4}^{\pi/2} (\sin x - \cos x) dx$$

$$\begin{aligned} &= [\sin x + \cos x]_0^{\pi/4} + [-\cos x - \sin x]_{\pi/4}^{\pi/2} \\ &= (\sqrt{2} - 1) - (1 - \sqrt{2}) = 2\sqrt{2} - 2 \end{aligned}$$

135. (b) Put $x + y = v$ and $1 + \frac{dy}{dx} = \frac{dv}{dx}$

Therefore, the differential equation reduces to

$$\frac{dv}{dx} = (1 + \cos v) + \sin v = 2 \cos^2 \frac{v}{2} + 2 \sin \frac{v}{2} \cos \frac{v}{2}$$

$$= 2 \cos^2 \frac{v}{2} \left(1 + \frac{\tan v}{2} \right)$$

$$\Rightarrow \int \frac{\sec^2 \frac{v}{2}}{2 \left[1 + \tan \left(\frac{v}{2} \right) \right]} dv = \int dx$$

$$\therefore \log \left[1 + \tan \left(\frac{x+y}{2} \right) \right] = x + C$$

136. (c) Since, the intersection of two curves

$y = x^3$ and $y = \sqrt{x}$ are $x = 0$ and $x = 1$.

$$\begin{aligned} \therefore A &= \left| \int_0^1 (x^3 - \sqrt{x}) dx \right| = \left| \left[\frac{x^4}{4} - \frac{2x^{3/2}}{3} \right]_0^1 \right| \\ &= \left| \left[\frac{1}{4} - \frac{2}{3} \right] \right| = \frac{5}{12} \text{ sq units} \end{aligned}$$

137. (c) $\lim_{n \rightarrow \infty} \frac{an(1+n) - (1+n^2)}{1+n}$

$$= \lim_{n \rightarrow \infty} \frac{(a-1)n^2 + an - 1}{n+1} = \infty,$$

If $a - 1 \neq 0$ limit does not exist and if $a - 1 = 0$, then

$$\lim_{n \rightarrow \infty} \frac{an - 1}{n+1} = a = b$$

$$\Rightarrow a = b = 1$$

138. (b) Total ways in which papers can be checked is equal to 7^4 . Now, two teachers who have to check all the papers can be selected in 7C_2 ways and papers can be checked by them is $(2^4 - 2)$ favourable ways.

Thus, required probability

$$= \frac{{}^7C_2 (2^4 - 2)}{7^4} = \frac{6}{49}$$

28 SELF STUDY GUIDE BITSAT

139. (c) Given, equation of hyperbola is

$(10x - 5)^2 + (10y - 4)^2 = \lambda^2 (3x + 4y - 1)^2$ can be rewritten as

$$\frac{\sqrt{\left(x - \frac{1}{2}\right)^2 + \left(y - \frac{2}{5}\right)^2}}{\left|\frac{3x + 4y - 1}{5}\right|} = \left|\frac{\lambda}{2}\right|$$

This is of the form of $\frac{PS}{PM} = e$

Where, P is any point on the hyperbola and S is a focus and M is the point of directrix.

Here, $\left|\frac{\lambda}{2}\right| > 1 \Rightarrow |\lambda| > 2 (\because e > 1)$

$$\Rightarrow \lambda < -2 \text{ or } \lambda > 2$$

140. (a) $v = \hat{a} \times \hat{b} = |\hat{a}| |\hat{b}| \sin \theta \hat{n} = \sin \theta \hat{n}$

Where, θ is the angle between a and b . $[\because |a| = 1 = |b|]$

$$\therefore |v| = \sin \theta$$

Now, $u = \hat{a} - (\hat{a} \cdot \hat{b}) \hat{b} = \hat{a} - (\cos \theta) \hat{b}$

$$\begin{aligned} \Rightarrow |u|^2 &= (\hat{a} - (\cos \theta) \hat{b}) \cdot (\hat{a} - (\cos \theta) \hat{b}) \\ &= a^2 + \cos^2 \theta b^2 - 2 \cos \theta ab \quad [|a|^2 = |b|^2 = |a||b| = 1] \\ &= 1 + \cos^2 \theta - 2 \cos^2 \theta \\ &= 1 - \cos^2 \theta = \sin^2 \theta \end{aligned}$$

$$\therefore |u| = \sin \theta$$

Thus $|v| = |u|$

141. (c) Variance = $\frac{1}{n} \sum (x - \bar{x})^2 \sigma^2$

$$\begin{aligned} \text{New variance} &= \frac{1}{n} \sum (\alpha x - \alpha \bar{x})^2 \\ &= \alpha^2 \frac{1}{n} \sum (x - \bar{x})^2 = \alpha^2 \sigma^2 \end{aligned}$$

142. (a) Given, coefficient of variation $C_1 = 50$

and coefficient of variation $C_2 = 60$.

We have, $\bar{x}_1 = 30$ and $\bar{x}_2 = 25$

$$\therefore C = \frac{\sigma}{\bar{x}} \times 100$$

$$50 = \frac{\sigma_1}{30} \times 100$$

$$\Rightarrow \sigma_1 = 15$$

$$\text{and } 60 = \frac{\sigma_2}{25} \times 100$$

$$\Rightarrow \sigma_2 = 15$$

$$\therefore \text{Required difference } \sigma_1 - \sigma_2 = 15 - 15 = 0$$

143. (c) Given, constraints are $2x + 3y \leq 18$, $2x + y \leq 10$,

$x \geq 0$, $y \geq 0$.

The feasible region is $OABCO$.

Also, $z = 9x + 13y$

At $O(0, 0)$, $z = 0$

At $A(5, 0)$, $z = 45$

At $B(3, 4)$, $z = 27 + 52 = 79$

At $C(0, 6)$, $z = 78$

$\therefore$ Maximum value of z is 79.

144. (c) The man has to win atleast 4 times.

$\therefore$ Required probability

$$\begin{aligned} &= {}^7C_4 \left(\frac{1}{2}\right)^4 \left(\frac{1}{2}\right)^3 + {}^7C_5 \left(\frac{1}{2}\right)^5 \left(\frac{1}{2}\right)^2 + {}^7C_6 \left(\frac{1}{2}\right)^6 \left(\frac{1}{2}\right) + {}^7C_7 \left(\frac{1}{2}\right)^7 \\ &= ({}^7C_4 + {}^7C_5 + {}^7C_6 + {}^7C_7) \times \frac{1}{2^7} = \frac{64}{2^7} = \frac{1}{2} \end{aligned}$$

145. (c) $\therefore \frac{-\pi}{2} \leq \sin^{-1} x \leq \frac{\pi}{2}$, $\frac{-\pi}{2} \leq \sin^{-1} y \leq \frac{\pi}{2}$

$$\text{and } \frac{-\pi}{2} \leq \sin^{-1} z \leq \frac{\pi}{2}$$

Given that,

$$\sin^{-1} x + \sin^{-1} y + \sin^{-1} z = \frac{3\pi}{2}$$

Which is possible only when

$$\sin^{-1} x = \sin^{-1} y = \sin^{-1} z = \frac{\pi}{2}$$

$$\Rightarrow x = y = z = 1$$

Put $p = q = 1$

Then, $f(2) = f(1) \quad f(1) = 2 \times 2 = 4$

and put $p = 1, q = 2$

then, $f(3) = f(1) f(2)$

$$= 2 \cdot 2^2 = 8$$

$$\begin{aligned} \therefore x^{f(1)} + y^{f(2)} + z^{f(3)} &= \frac{x + y + z}{x^{f(1)} + y^{f(2)} + z^{f(3)}} \\ &= 1 + 1 + 1 - \frac{3}{1 + 1 + 1} = 3 - 1 = 2 \end{aligned}$$

146. (c) Here,

$$T_n = \frac{n(n+1)}{n!} = \frac{n-1+2}{(n-1)!} = \frac{1}{(n-2)!} + \frac{2}{(n-1)!}$$

$$\begin{aligned} \therefore S &= \sum_{n=1}^{\infty} T_n = \sum_{n=1}^{\infty} \frac{1}{(n-2)!} + 2 \sum_{n=1}^{\infty} \frac{1}{(n-1)!} \\ &= e + 2e = 3e \end{aligned}$$

147. (b) Since, $|z_1| = |z_2| = |z_3|$

$\therefore$ 0 is the circumcentre of an equilateral $\triangle ABC$.

$$\therefore \frac{x_1 + x_2 + x_3}{3} = 0 = \frac{y_1 + y_2 + y_3}{3}$$

where, $z_1 = x_1 + iy_1$

$$\Rightarrow \frac{x_1 + x_2 + x_3}{3} + i \left(\frac{y_1 + y_2 + y_3}{3} \right) = 0$$

$$\Rightarrow (x_1 + iy_1) + (x_2 + iy_2) + (x_3 + iy_3) = 0$$

$$z_1 + z_2 + z_3 = 0$$

148. (b) Let $I = \int \frac{dx}{(\sqrt{x})^2 + (\sqrt{x})^7}$

$$= \int \frac{dx}{(\sqrt{x})^7 \left(\frac{1}{(\sqrt{x})^5} + 1 \right)}$$

Put $1 + \frac{1}{(\sqrt{x})^5} = t$

$$\Rightarrow -\frac{5}{2} \cdot \frac{1}{(\sqrt{x})^7} dx = dt$$

$$\therefore I = -\frac{2}{5} \int \frac{dt}{t} = -\frac{2}{5} \log t + C$$

$$= -\frac{2}{5} \log \left[1 + \frac{1}{(\sqrt{x})^5} \right] + C$$

$$= -\frac{2}{5} \log \left(\frac{x^{5/2} + 1}{x^{5/2}} \right) + C$$

$$\Rightarrow \lambda = \frac{-2}{5} \text{ and } a = \frac{5}{2}$$

$$\therefore a + \lambda = 2.1 > 2$$

149. (b) Equation of line joining the points (0, 3) and (5, -2) is

$$y = 3 - x.$$

If this line is tangent to $y = \frac{ax}{a(x+1)}$, then

$$(3-x)(x-11) = ax \text{ should have equal roots.}$$

$$\text{Thus, } (a-2)^2 + 12 = 0$$

$$\Rightarrow \text{No value of } a \Rightarrow a \in \phi$$

150. (b) Shortest distance between two curves occurred along the common normal.

$\therefore$ Normal to $y^2 = 4x$ at $(m^2, 2m)$ is

$$y + mx - 2m - m^3 = 0$$

Normal to $y^2 = 2(x-3)$ at $\left(\frac{m^2}{2} + 3, m\right)$ is

$$y + m(x-3) - m - \frac{m^3}{2} = 0$$

Both normals are same, if

$$-2m - m^3 = -4m - \frac{1}{2}m^3 \Rightarrow m = 0, 2$$

So, points will be (4, 4) and (5, 2) or (4, -4) and (5, -2).

Hence, shortest distance will be

$$\sqrt{(1+4)} = \sqrt{5}$$

- There are 150 questions in all. The number of questions in each part is as given below.
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

Part I Physics	1-40
Part II Chemistry	41-80
Part III (a) English Proficiency	81-95
(b) Logical Reasoning	96-105
Part IV Mathematics	106-150

PART I

Physics

- Two inductors L_1 and L_2 are connected in parallel and a time varying current flows as shown in figure. The ratio of current $\frac{i_1}{i_2}$ at any time t is

- a. $\frac{L_2}{L_1}$ b. $\frac{L_1}{L_2}$ c. $\frac{L_2^2}{(L_1 + L_2)^2}$ d. $\frac{L_1^2}{(L_1 + L_2)^2}$

- A parallel plate capacitor C with plates of unit area and separation d is filled with a liquid of dielectric constant $K = 2$, the level of liquid is $\frac{d}{3}$, initially.

Suppose, the liquid level decreases at a constant speed v , the time constant as a function of time is

- a. $\frac{6\epsilon_0 R}{5d + 3vt}$ b. $\frac{(15d + 9vt)\epsilon_0 R}{2d^3 - 3dvt - gv^2t^2}$
 c. $\frac{6\epsilon_0 R}{5d - 3vt}$ d. $\frac{(15d - 9vt)\epsilon_0 R}{2d^3 + 3dvt - 9v^2t^2}$

- Steam at 100°C is passed into 1.1 kg of water contained in a calorimeter of water equivalent to 0.2 kg at 15°C till the temperature of the calorimeter and its contents rises to 80°C . The mass of steam condensed (in kg) is

- a. 0.130 b. 0.065 c. 0.260 d. 0.135

- Dimension of which base quantity corresponds to that of $\sqrt{\frac{Gh}{c^3}}$ = ?

- a. Time b. Length
c. Mass d. Temperature

- A reservoir is at 827°C and Carnot's engine takes a thousand kilocalories of heat from it and exhausts it to a sink at 27°C . What is the amount of work and the efficiency of the engine?

- a. 2.7×10^5 cal, 70.70% b. 2.72×10^5 cal, 72.72%
c. 2.70×10^5 cal, 80.70% d. 3.70×10^5 cal, 70.70%

- A train moves towards stationary observer with speed 34 m/s. The train blows whistle and its frequency is registered by the observer as f_1 . If the train's speed is reduced to 17 m/s, the frequency registered is f_2 . If the speed of sound is 340 m/s, then the ratio $\frac{f_1}{f_2}$ is

- a. $\frac{19}{18}$ b. $\frac{18}{19}$ c. 2 d. 1/2

2 SELF STUDY GUIDE BITSAT

7. An object of mass 5 kg is projected with a velocity 20 ms^{-1} at an angle 60° , to the horizontal. At the highest point of its path, the projectile explodes and breaks up into two fragments of masses 1 kg and 4 kg. The fragments separate horizontally after the explosion, which releases internal energy such that the KE of the system at the highest point is doubled. The separation between the two fragments when they reach the ground is

a. 52.25 m b. 44.25 m
c. 65.32 m d. 78.76 m

8. An automobile moving with a speed of 36 km/h reaches an upward inclined road of angle 30° , its engine becomes switch off. If the coefficient of friction is 0.1, then how much distance will automobile move before coming to rest?

a. 12.53 m b. 21.42 m
c. 15.43 m d. 8.53 m

9. In the circuit given below, the value of resistance X , when the potential difference between the points B and D is zero, will be

a. 9Ω b. 8Ω c. 4Ω d. 6Ω

10. A block of wood floats in water with $(4/5)$ th of its volume submerged. If the same block just floats in a liquid, the density of liquid in (kg m^{-3}) is

a. 1250 b. 600 c. 400 d. 800

11. As current i flowing through the loop as shown in figure. The magnetic field at the centre O is

a. $\frac{7\mu_0 i}{12r}$ acting downwards
b. $\frac{5\mu_0 i}{12r}$ acting upwards
c. $\frac{7\mu_0 i}{12r}$ acting upwards
d. $\frac{5\mu_0 i}{12r}$ acting downwards

12. The ratio of angular momentum L to the atomic dipole moment μ_l for hydrogen like atoms and ions is

a. always constant and is equal to the ratio of mass to the charge of electron

b. always constant and is equal to twice the ratio of mass to the charge of electron to the principal quantum number n

c. proportional to the principal quantum number n

d. proportional to $\frac{1}{n^2}$

13. Three rods of identical cross-sectional area and made from the same metal, form the sides of an isosceles triangle ABC right angled at B as shown in figure. The point A and B are maintained at temperature T and $\sqrt{2}T$ respectively, in the

steady state. Now, assuming that only heat conduction takes place. The temperature of point C will be

a. $\frac{T}{\sqrt{2}+1}$ b. $\frac{T}{\sqrt{2}-1}$ c. $\frac{3T}{\sqrt{2}+1}$ d. $\frac{\sqrt{3}T}{(\sqrt{2}+1)}$

14. A resistor R , an inductor L , a capacitor C and voltmeters V_1, V_2 and V_3 are connected to an oscillator in the circuit as shown in the adjoining diagram. When the frequency of the

oscillation is increased, then at the resonant frequency, the voltmeter reading is zero in the case of

a. voltmeter V_1 only b. voltmeter V_2 only
c. voltmeter V_3 only d. All the three voltmeters

15. In Young's double slit experiment, intensity at a point is $\left(\frac{1}{4}\right)$ of the maximum intensity. Angular position of this point is

a. $\sin^{-1}\left(\frac{\lambda}{d}\right)$ b. $\sin^{-1}\left(\frac{\lambda}{2d}\right)$
c. $\sin^{-1}\left(\frac{\lambda}{3d}\right)$ d. $\sin^{-1}\left(\frac{\lambda}{4d}\right)$

16. The bob of simple pendulum is a spherical hollow ball filled with water. A plugged hole near the bottom of the oscillating bob get suddenly unplugged. During observation, till water is coming out, the time period of oscillation would

a. first increase and then decrease to the original value
b. first decrease and then increase to the original value
c. remain unchanged
d. increase towards a saturation value

17. At a certain temperature, the number density of charge carriers in a semiconductor is n . When an electric field is applied to it, the charge carriers drift with an average speed v . If the temperature of the semiconductor is raised.

- a. n will increase but v will decrease
 b. n will decrease but v will increase
 c. Both n and v will increase
 d. Both n and v will decrease
18. Consider the acceleration, velocity and displacement of a tennis ball as it falls to the ground and bounces back. Directions of which of these change in the process?
 a. Velocity only
 b. Displacement and velocity
 c. Acceleration, velocity and displacement
 d. Displacement and acceleration
19. A convex lens shown in the figure is made up of two types of transparent materials. A point sources of light is placed on its principal axis. If reflections from the boundaries between layers are ignored, the lens will form
 a. only one image
 b. two images
 c. infinite images
 d. no image at all
- 
20. If the time period is doubled, then the angular momentum of the body will (provided the moment of inertia of the body is constant)
 a. remain constant
 b. quadruple
 c. become half
 d. double
21. Breaking stress of a steel wire is p and the density of steel is ρ . The greatest length of steel wire that can hang vertically without breaking is
 a. $\frac{p}{\rho g}$
 b. $\frac{p}{2\rho g}$
 c. $\frac{2p}{\rho g}$
 d. None of these
22. A stone is projected with velocity $2\sqrt{gh}$, so that it just clears two walls of equal height h , at distance of $2h$ from each other. The time interval of passing between the two walls is
 a. $\sqrt{\frac{h}{g}}$
 b. $\sqrt{\frac{2h}{g}}$
 c. $2\sqrt{\frac{h}{g}}$
 d. $\frac{2h}{g}$
23. An object takes n times as much time to slide down a 45° rough inclined plane as it takes to slide down a perfectly smooth 45° inclined plane. The coefficient of kinetic friction between the rough plane and the object is
 a. $n^2 - 1$
 b. $1 - \frac{1}{n^2}$
 c. $n^2 + 1$
 d. $1 + \frac{1}{n^2}$
24. Some amount of a radioactive substance (half-life = 10 days) is spread inside a room and consequently the level of radiation becomes 50 times the permissible level for normal occupancy of the room. After how many days will the room be safe for occupation?
 a. 20 days
 b. 34.8 days
 c. 56.4 days
 d. 62.9 days

25. Helium gas goes through a cycle $ABCD$ (consisting of two isochoric and two isobaric lines) as shown in figure. The efficiency of this cycle is approximately

- a. 15.4% b. 9.1% c. 10.5% d. 12.5%

26. The frequency and the intensity of incident beam of light falling on the surface of a photoelectric material is increased by a factor of two. This will
 a. increase the maximum kinetic energy of the ejected photoelectrons by a factor of more than two and would increase the photoelectric current by a factor of two.
 b. increase the maximum kinetic energy of the photoelectrons and would increase the photoelectric current both by a factor of two.
 c. increase the maximum kinetic energy of the photoelectrons by a factor of two and will have no effect on the magnitude of the photoelectric current produced.
 d. not produce any effect on the kinetic energy of the emitted photoelectrons but will increase the photoelectric current by a factor of two.

27. A copper rod of mass m slides under gravity on two smooth parallel rails l distance apart and set an angle θ to the horizontal. At the bottom, the rails are joined by a resistance R in figure. There is a uniform magnetic field B perpendicular to the plane of the rails. The terminal velocity of rod is
 a. $\frac{mgR \tan \theta}{B^2 l^2}$
 b. $\frac{mgR \cot \theta}{B^2 l^2}$
 c. $\frac{mgR \sin \theta}{B^2 l^2}$
 d. $\frac{mgR \cos \theta}{B^2 l^2}$

28. An asteroid of mass m is approaching earth, initially at a distance $10 R_e$ with speed v_i . It hits earth with a speed v_f (R_e and M_e are radius and mass of earth), then
 a. $v_f^2 = v_i^2 + \frac{2Gm}{R_e} \left(1 + \frac{1}{10}\right)$
 b. $v_f^2 = v_i^2 + \frac{2GM_e}{R_e} \left(1 + \frac{1}{10}\right)$
 c. $v_f^2 = v_i^2 + \frac{2GM_e}{R_e} \left(1 - \frac{1}{10}\right)$
 d. $v_f^2 = v_i^2 + \frac{2Gm}{R_e} \left(1 - \frac{1}{10}\right)$

4 SELF STUDY GUIDE BITSAT

29. When photon of energy 4.0 eV strikes the surface of a metal A , the ejected photoelectrons have maximum kinetic energy T_A eV and de-Broglie wavelength λ_A . The maximum kinetic energy of photoelectrons liberated from another metal B by photon of energy 4.50 eV is $T_B = (T_A - 1.50)$ eV. If the de-Broglie wavelength of these photoelectrons $\lambda_B = 2\lambda_A$, then choose the correct statement(s).

- The work function of A is 1.50 eV
- The work function of B is 4.0 eV
- $T_A = 3.2$ eV
- All of the above

30. A pulley of radius 2 m is rotated about its axis by a force $= (20t - 5t^2)$ newton (where t is measured in seconds) applied tangentially. If the moment of inertia of the pulley about its axis of rotation is 10 kg m^2 , the number of rotation made by the pulley before its direction of motion is reversed is

- more than 3 but less than 6
- more than 6 but less than 9
- more than 9
- less than 3

31. A planoconvex lens has thickness of 4 cm. When placed on a horizontal table, with the curved surface in contact with it, the apparent depth of the bottom most point of the lens is found to be 3 cm. If the lens is inverted such that the plane face is in contact with the table, the apparent depth of the centre of the plane face is found to be $\frac{25}{8}$ cm. The focal length of the lens is

(assume thickness of lens to be negligible)

- 85 cm
- 59 cm
- 75 cm
- 7.5 cm

32. A spherically symmetric gravitational system of particles has mass density

$$\rho = \begin{cases} \rho_0 & \text{for } r \leq R \\ 0 & \text{for } r > R \end{cases}$$

where, ρ_0 is a constant. A test mass can undergo circular motion under the influence of the gravitational field of particles. Its speed v as a function of distance r ($0 < r < \infty$) from the centre of the system is represented by

33. In the given circuit,

The current through battery is

- 0.5 A
- 1 A
- 1.5 A
- 2.5 A

34. A trolley having mass of 200 kg moves with uniform speed of 36 kmh^{-1} on a frictionless track. A child of mass 20 kg runs on the trolley from one end to the other (10 m away) with a speed of 4 ms^{-1} relative to the trolley in a direction opposite to its motion and ultimately jumps out of the trolley. With how much velocity has the trolley moved from the time the child begins to run?

- 10.36 ms^{-1}
- 11.36 ms^{-1}
- 12.36 ms^{-1}
- 14.40 ms^{-1}

35. A gas has molar heat capacity $C = 37.55 \text{ J mol}^{-1}\text{K}^{-1}$, in this process $pT = \text{constant}$. The number of degree of freedom of the molecule of gas is

- 2
- 3
- 5
- 7

36. If x, v and a denote the displacement, the velocity and the acceleration of a particle executing SHM of time period T . Then, which of the following does not change with time?

- $\frac{aT}{x}$
- $aT + 2\pi v$
- $\frac{aT}{v}$
- $a^2T^2 + 4\pi^2v^2$

37. To increase the current sensitivity of a moving coil galvanometer by 50%, its resistance is increased, so that new resistance becomes twice its initial resistance, by what factor does its voltage sensitivity change?

- Increases by 15%
- Decreases by 15%
- Increases by 25%
- Decreases by 25%

38. A ball is dropped vertically from a height d above the ground. It hits the ground and bounces up vertically to a height $d/2$. Neglecting subsequent motion and air resistance, its velocity v varies with height h above the ground as

39. In the given circuit, it is observe that the current I is independent of the value of resistance R_6 . Then, the resistance value must satisfy

a. $\frac{1}{R_5} + \frac{1}{R_6} = \frac{1}{R_1 + R_2} + \frac{1}{R_3 + R_4}$

- b. $R_1 R_4 = R_2 R_3$
 c. $R_1 R_2 R_5 = R_3 R_4 R_6$
 d. $R_1 R_3 = R_2 R_4 = R_5 R_6$

40. If a drop of liquid breaks into smaller droplets, it results in lowering of temperature of the droplets. Let a drop of radius R , break into N small droplets each of radius r , then decrease (drop) in temperature Q' (given, specific heat of liquid drop = S and surface tension = T)

a. $\frac{3T}{\rho S} \left[\frac{1}{r} - \frac{1}{R} \right]$ b. $-\frac{2T}{\rho S} \left[\frac{1}{r} - \frac{1}{R} \right]$
 c. $\frac{2R}{\rho S} \left[\frac{1}{R} - \frac{1}{r} \right]$ d. $\frac{3T}{\rho S} \left[\frac{1}{R} - \frac{1}{r} \right]$

PART II

Chemistry

41. A metallic element has a cubic lattice. Each edge of the unit cell is $2\text{\AA}$ and the density of metal is 2.5 g cm^{-3} . The unit cell in 200 g of metal are
 a. 1×10^{24} b. 1×10^{22}
 c. 1×10^{20} d. 1×10^{25}
42. Four gases P , Q , R and S have almost same values of 'b' but their 'a' values (a and b are van der Waals' constant) are in the order $Q < R < S < P$. At a particular temperature, among the four gases, the most easily liquifiable one is
 a. P b. Q c. R d. S
43. If $\left[\frac{0.51 \times 10^{-10}}{4} \right]$ metre is the radius of smallest electron orbit in hydrogen like atom, then the atom is
 a. hydrogen atom b. He^+
 c. Li^{2+} d. Be^{3+}
44. Which of the following is the correct order for the wavelength if absorption in the visible region.
 a. $[\text{Ni}(\text{NO}_2)_6]^{4-} < [\text{Ni}(\text{NH}_3)_6]^{2+} < [\text{Ni}(\text{H}_2\text{O})_6]^{2+}$
 b. $[\text{Ni}(\text{NO}_2)_6]^{4-} < [\text{Ni}(\text{H}_2\text{O})_6]^{2+} < [\text{Ni}(\text{NH}_3)_6]^{2+}$
 c. $[\text{Ni}(\text{H}_2\text{O})_6]^{2+} < [\text{Ni}(\text{NH}_3)_6]^{2+} < [\text{Ni}(\text{NO}_2)_6]^{4-}$
 d. $[\text{Ni}(\text{NH}_3)_6]^{2+} < [\text{Ni}(\text{H}_2\text{O})_6]^{2+} < [\text{Ni}(\text{NO}_2)_6]^{4-}$
45. The empirical formula and molecular mass of a compound are CH_2O and 180g respectively. The molecular formula of the compound will be
 a. $\text{C}_9\text{H}_{18}\text{O}_9$ b. CH_2O
 c. $\text{C}_6\text{H}_{12}\text{O}_6$ d. $\text{C}_2\text{H}_4\text{O}_2$
46. In the context of the Hall-Heroult process for the extraction of Al, which of the following statement is incorrect.
 a. CO and CO_2 are produced in the process.
 b. Al_2O_3 is mixed with CaF_2 which lowers the melting point of the mixture and brings conductivity.
 c. Al^{3+} is reduced at the cathode to form Al.
 d. Na_3AlF_6 serves as the electrolyte.
47. Which test among the following is not used for the distinction among 1° , 2° and 3° aliphatic amine.
 a. Hinsberg's reagent test b. Carbylamine reaction
 c. Azo dye test d. Action with nitrous acid
48. The incorrect statement about carbonate (CO_3^{2-}) ion is,
 a. It has planar structure
 b. It has one coordinate bond
 c. It has three resonating structure
 d. Hydrolysis of CO_3^{2-} ion gives basic solution
49. Under the same reaction conditions, initial concentration of 1.386 mol dm^{-3} of a substance becomes half in 40 s and 20 s through first order and zero order kinetics, respectively. Ratio $\left(\frac{k_1}{k_0} \right)$ of the rate of constants for first order (k_1) and zero order (k_0) of the reaction is
 a. $0.5\text{ mol}^{-1}\text{dm}^3$ b. 1.0 mol dm^{-3}
 c. 1.5 mol dm^{-3} d. $2.0\text{ mol}^{-1}\text{dm}^3$
50. Which substance has a dipole moment?
 a. CCl_4 b. CH_2Cl_2
 c. C_2Cl_2 d. C_2Cl_4
51. Enthalpy of combustion of methane and ethane are -210 kcal/mol and -368 kcal/mol respectively. The enthalpy of combustion of decane is
 a. -1582 kcal b. -1632 kcal
 c. -1700 kcal d. -1480 kcal

6 SELF STUDY GUIDE BITSAT

52. The correct sequence of reagents for the following conversion will be

- a. O_3 / Red P, $AlCl_3$, $MeCOOH$
 b. $H_2SO_4 + HgSO_4, H_2O$ / Heat
 c. O_3 / $Zn - AcOH, H_2SO_4 + HgSO_4 / H_2O$ / Heat
 d. $CH_3COOH, H_2O_2 + \bar{O}H / H_2O$
53. In an atom, an electron is moving with a speed of 600 m/s with an accuracy of 0.005%. Certainly with which the position of the electron can be located is ($h = 6.6 \times 10^{-34} \text{ kg m}^2\text{s}^{-1}$, mass of electron, $e_m = 9.1 \times 10^{-31} \text{ kg}$)
 a. $1.52 \times 10^{-4} \text{ m}$ b. $5.10 \times 10^{-3} \text{ m}$
 c. $1.92 \times 10^{-3} \text{ m}$ d. $3.84 \times 10^{-3} \text{ m}$
54. Which of the following diatomic molecules would be stabilised by the removal of an electron?
 a. C_2 b. CN
 c. N_2 d. O_2
55. 0.5F of electricity is through 500 mL of copper sulphate solution. The amount of copper which can be deposited will be
 a. 63.5g b. 31.75g
 c. 15.80g d. unpredictable
56. Consider the following sequence of reactions.

$$Z \xrightarrow{PCl_5} X \xrightarrow{\text{Alc. KOH}} Y \xrightarrow[2H_2O/\Delta]{\text{Conc. } H_2SO_4} Z$$
 'Z' is
 a. $CH_3CH_2CH_2OH$ b. $(CH_3)_2COH$
 c. $CH_3 - \underset{\substack{| \\ OH}}{CH} - CH_3$ d. None of these
57. An equilibrium mixture at 300K contains N_2O_4 and NO_2 at 0.28 and 1.1 atm pressure, respectively. If the volume of the container is doubled, the new equilibrium pressure of these two gases are respectively.
 a. 0.064 atm and 0.095 atm
 b. 0.64 atm and 0.095 atm
 c. 0.095 atm and 0.632 atm
 d. 0.095 atm and 0.64 atm
58. Which among the following actinoids does not have stable electronic configuration
 a. Protactinium b. Nobelium
 c. Americium d. Lawrencium
59. Which of the following statement is incorrect regarding the equation

- a. The equivalent weight of $MeCHO$ is 22.
 b. Three moles of $\bar{O}H$ are required in the reaction.
 c. $MeCHO$ acts as an oxidising agent.
 d. $[Ag(NH_3)_2]^+$ gets reduced.

60. Which of the following graph is correctly represented according to Freundlich isotherm.

61. pH of a saturated solution of $Ba(OH)_2$ is 12. The value of its K_{sp} is
 a. $3.3 \times 10^{-7} \text{ M}$ b. $5.0 \times 10^{-7} \text{ M}$
 c. $4.0 \times 10^{-6} \text{ M}$ d. $5.0 \times 10^{-6} \text{ M}$
62. An unsaturated hydrocarbon 'X' gives white precipitate with Tollen's reagent. If X is gaseous in nature, the molecular formula of X is
 a. C_3H_6 b. C_2H_4
 c. C_2H_2 d. C_4H_8
63. The rate of a reaction triples when temperature changes from 20°C to 50°C . The energy of activation for the reaction is ($R = 8.314 \text{ JK}^{-1} \text{ mol}^{-1}$)
 a. $181.327 \text{ J mol}^{-1}$
 b. $428.141 \text{ J mol}^{-1}$
 c. $32.4321 \text{ kJ mol}^{-1}$
 d. $28.8118 \text{ kJ mol}^{-1}$
64. Which of the following compound will give blood red colour while doing the Lassaigne's test for N.
 a. $(NH_2)C=O$ b. $H_2N(C_6H_4)SO_3H$
 c. $C_6H_5SO_3H$ d. $CHCl_3$
65. For a reaction, $A + B^{2+} \longrightarrow B + A^{2+}$, at 25°C $E^\circ = 0.2955 \text{ V}$. The value of K_{eq} is
 a. 10 b. 10^{10}
 c. -10 d. 10^{-10}
66. Which of the following is the correct order of stability of conformations for $NH_2-CH_2-CH_2-OH$.
 a. gauche > eclipsed > anti
 b. gauche > anti > eclipsed
 c. eclipsed > gauche > anti
 d. anti > eclipsed > gauche

67. When H_2S gas is passed into a mixture of Mn^{2+} , Ni^{2+} , Cu^{2+} and Hg^{2+} ion in an acidified aqueous solution, the precipitates formed are

- CuS and HgS
- MnS and CuS
- MnS and NiS
- NiS and HgS

68. A mixture of bromo trichloride and hydrogen is subjected to silent electric discharge to form x and HCl . x is mixed with NH_3 and heated to 200°C to form y . The formula of y is

- B_2O_3
- $\text{B}_3\text{N}_3\text{H}_6$
- H_3BO_3
- B_2H_6

69. Which of the following reactions increases the production of dihydrogen from synthesis gas?

- $\text{CH}_4(\text{g}) + \text{H}_2\text{O}(\text{g}) \xrightarrow[\text{Ni}]{1270\text{K}} \text{CO}(\text{g}) + 3\text{H}_2(\text{g})$
- $\text{C}(\text{s}) + \text{H}_2\text{O}(\text{g}) \xrightarrow{1270\text{K}} \text{CO}(\text{g}) + \text{H}_2(\text{g})$
- $\text{CO}(\text{g}) + \text{H}_2\text{O}(\text{g}) \xrightarrow[\text{Catalyst}]{673\text{K}} \text{CO}_2(\text{g}) + \text{H}_2(\text{g})$
- $\text{C}_2\text{H}_6 + 2\text{H}_2\text{O} \xrightarrow[\text{Ni}]{1270\text{K}} 2\text{CO} + 5\text{H}_2$

70. When the heat of a reaction at constant pressure is -25×10^{-3} cal and entropy change for the reaction is 7.4 cal deg^{-1} , it is predicted that the reaction at 25°C is

- reversible
- spontaneous
- non-spontaneous
- irreversible

71. The addition of HBr to 1-butene gives a mixture of products x , y and z .

The mixture consists of

- x and y as major and z as minor products
- y as major, x and z as minor products
- y as minor, x and z as major products
- x and y as minor and z as major products

72. The correct statement about silicone is

- They are ketones with silyl group (SiH_3) similar to alkyl, $(\text{SiH}_3)_2\text{CO}$.
- They are synthetic polymer containing repeated R_2SiO_2 units.
- They are formed by hydrolysis of R_2SiCl_2 .
- All of the above

73. When dil. sulphuric acid reacts with aqueous solution of potassium chromate, the colour changes from yellow to orange. This shows that

- chromate ions reduced
- chromate ions are oxidised
- monocentric complex is converted into dicentric complex
- oxygen gets removed from chromate ions

74. Valence electrons in the element A are 3 and that in element B are 6. Most probable compound formed from A and B is

- A_2B
- AB_2
- A_6B_3
- A_2B_3

75. In non-reducing disaccharide, the reducing group of monosaccharides i.e. aldehydic or ketonic group are bounded.

Which of the following disaccharide is a non-reducing sugar?

76. Which of the following 0.1 M aqueous solution will have lowest freezing point?

- Potassium sulphate
- Sodium chloride
- Urea
- Glucose

77. A penicillin is a member of a family of drugs that have a

- four membered cyclic amide fused to a five membered thiazolidine ring.
- three membered cyclic amide fused to a five-membered thiazolidine ring
- four-membered cyclic amide fused to have a four membered thiazolidine ring.
- five-membered cyclic amide fused to have a five membered thiazolidine ring

SELF STUDY GUIDE **BITSAT**

- $$5\text{Br}^-(aq) + \text{BrO}_3^-(aq) + 6\text{H}^+(aq) \longrightarrow 3\text{Br}_2(l) + 3\text{H}_2\text{O}(l)$$

a. $\frac{\Delta[\text{Br}^-]}{\Delta t} = \frac{5}{6} \frac{\Delta[\text{H}^+]}{\Delta t}$ b. $\frac{\Delta[\text{Br}^-]}{\Delta t} = \frac{6}{5} \frac{\Delta[\text{H}^+]}{\Delta t}$

c. $\frac{\Delta[\text{Br}^-]}{\Delta t} = \frac{5\Delta[\text{H}^+]}{\Delta t}$ d. $\frac{\Delta[\text{Br}^-]}{\Delta t} = \frac{6\Delta[\text{H}^+]}{\Delta t}$

- | Column I | Column II |
|-------------------|------------------------|
| A. Neoprene | I. Isoprene |
| B. Natural rubber | II. Tetrafluoro ethane |
| C. Teflon | III. Chloroprene |
| D. Acrilan | IV. Acrylnitrile |

a.	IV	III	II	I	b.	I	II	III	IV
c.	III	I	II	IV	d.	II	IV	I	II

Part III

a. English Proficiency

Directions (Q. Nos. 81-83) *In the following questions, the sentences may or may not be grammatically correct. Find out which part of a sentence has an error and mark that part. If there is no error mark part 'd' as your answer.*

- 81.** The captain along with his team (a)/are practising very hard (b)/ for the forthcoming match. (c)/ No error (d).
- 82.** I am going (a)/to have this certificate (b)/attest by the director. (c)/No error (d).
- 83.** He is (a)/ having many (b)/friends here.(c)/No error...(d).

Directions (Q. Nos. 84-85) *Fill in the blanks with suitable preposition from the alternatives given under each sentence.*

- 84.** Is not learning superior wealth?
a. than b. from
c. by d. to
- 85.** He could not cope the heavy workload.
a. in with b. up with
c. up d. with

Directions (Q. Nos. 86-88) *Select the word or the phrase which is closest to the opposite in meaning of the italicized word or phrase.*

- 86.** He was in a *dejected* mood.
a. jubilant b. rejected
c. irritable d. romantic
- 87.** The attack on the freedom of the press is a *retrograde* step.
a. progressive b. stubborn
c. punitive d. aggressive
- 88.** We should not *belittle* the value of small things.
a. extal b. praise
c. inflate d. expand

Directions (Q. Nos. 89-90) Choose the word nearest in meaning to the underlined word.

- 89.** Before I could make out anything he had spoken again.
a. find out b. apprehend
c. explain d. reveal
- 90.** He wrote a scathing review of the prize winning novel.
a. biased b. scornful
c. unbalanced d. subjective

Directions (Q. Nos. 91-95) *Read the passage given below and answer the questions that follow.*

The megalomaniac differs from the narcissist by the fact that he wishes to be powerful rather than charming and seeks to be feared rather than loved. To this type belong many lunatics and most of the great men in history. Love of power, like vanity, is a strong element in normal human nature and as such is to be accepted; it becomes deplorable only when it is excessive or associated with an insufficient sense of reality. Where this occurs, it makes a man unhappy or foolish, if not both. The lunatic who thinks he is crowned head may be, in a sense, happy, but his happiness is not of a kind that any sane person would envy. Alexander the Great was psychologically of the same type as the lunatic, though he possessed the talent to achieve the lunatic's dream.

He could not, however, achieve his own dream, which enlarged his scope as his achievement grew. When it became clear that he was the greatest conqueror known to fame, he decided that he was a God. Was he a happy man ? His drunkenness, his furious rages, his indifference to women and his claim to divinity, suggest that he was not. There is no ultimate satisfaction in the cultivation of one element of human nature at the expense of all the others, nor in viewing all the world as raw material for the magnificence of one's own ego.

91. What is the difference between an ordinary megalomaniac and a megalomaniac like Alexander the Great?
- The ordinary megalomaniac does not have excessive desire for power which Alexander the Great had
 - The ordinary megalomaniac does not have the talent to realise his wish which Alexander the Great had
 - The ordinary megalomaniac is a lunatic while Alexander the Great was not a lunatic
 - The ordinary megalomaniac is not great while Alexander the Great was great
92. How does a megalomaniac differ from a narcissist?
- By wishing to be charming and feared
 - By wishing to be loved and not feared
 - By wishing to be powerful and not feared
 - By wishing to be powerful and feared

b. Logical Reasoning

96. 'Umpire' is related to 'Match' in the same way as 'Judge' is related to
- Bar council
 - Lawyer
 - Judgement
 - Lawsuit
97. Find the odd one from the following options.
- 9, 49
 - 13, 121
 - 10, 61
 - 7, 25
98. Complete the series by replacing question mark '?'.
10, 9, 16, 45, 176, ?
- 815
 - 222
 - 555
 - 875
99. In a cricket team, Dhoni is taller than Virat but not as tall as Raina, Rohit is shorter than Dhoni but taller than Shikhar. Who among them is the shortest?
- Dhoni
 - Virat
 - Shikhar
 - Cannot be determined
100. Identify the missing part of the question figure and select it from given answer figures.

Question figures

Answer figures

93. In "Where this occurs it makes a man..... if not both," 'this' refers to
- vanity
 - lunacy
 - love of power
 - excessive lover of power
94. Which among the following is the reason for unhappiness?
- Dealing with the raw material of the world
 - Realising one's dream as a megalomaniac
 - The nurturing of only one element in human nature
 - Being indifferent towards women
95. Why has love of power to be accepted?
- Because it can become unreal
 - Because it is an excess in human nature
 - Because it is a part of human nature
 - Because it is vanity in human nature

101. Find out which of the figure (a), (b), (c) and (d) can be formed from the pieces given in question figures.

Questions figure

Answer figures

102. In this question, a piece of paper is folded and then cut as shown below. The dotted lines shown are the portion which have been folded.
- The curve arrow shows the directions of folding. And the number of scissors beneath the figure show the number of portions cut. From the given responses, indicate how it will appear when opened. The opening is in the same order as folding.

Question figures

Answer figures

103. Which of the answer figures (a), (b), (c) or (d) completes the figure matrix ?

Questions figures

Answer figures

104. In the following question, one or more dots are placed in the question figure.

This figure is followed by four alternatives marked as (a), (b), (c) and (d). One out of these four options contains region(s) common to circle, square and triangles, similar to that marked by the dot in question figure. Find that figure.

Question figure

Answer figures

105. How many triangles are there in the following figure?

- a. 16 b. 20 c. 12 d. 22

Part IV

Mathematics

106. The coefficient of x^{-n} in $(1+x)^n \left(1 + \frac{1}{x}\right)^n$ is

- a. 0 b. 1 c. 2^n d. $2n$

107. The greatest term in the expansion of $\sqrt{3} \left(1 + \frac{1}{\sqrt{3}}\right)^{20}$ is

- a. $\frac{26840}{9}$ b. $\frac{24840}{9}$
c. $\frac{25840}{9}$ d. None of these

108. The n th roots of unity are in

- a. AP b. GP
c. HP d. None of these

109. If $P = \begin{bmatrix} a & b & c \\ b & c & a \\ c & a & b \end{bmatrix}$, $abc = P^T P = I$, then the value of

$$a^3 + b^3 + c^3 \text{ is}$$

- a. 2 b. 1 c. 0 d. 5

110. If $x^2 = \begin{vmatrix} \sin \theta & \cos \theta & 0 \\ -\cos \theta & \sin \theta & 1 \\ \sin \theta & \cos \theta & 2 \end{vmatrix}$, then the value of

$$4x^2 + x \sin \frac{3\pi}{2} + 5 \text{ is}$$

- a. $13 - \sqrt{2}$ b. $13 + \sqrt{2}$
c. $\sqrt{2} - 13$ d. Both (a) and (b)

111. If a, b, c are in GP and $\log a - \log 2b, \log 2b - \log 3c$ and $\log 3c - \log a$ are in AP, then a, b and c are the lengths of the sides of a triangle, which is

- a. equilateral b. right angled
c. acute-angled d. obtuse angled

112. If $\sum_{r=1}^n t_r = \frac{n(n+1)(n+2)(n+3)}{8}$, where t_r denotes the r th

term of a series, then $\lim_{n \rightarrow \infty} \sum_{r=1}^n \frac{1}{t_r}$ is

- a. $\frac{1}{8}$ b. $\frac{1}{4}$ c. $\frac{1}{2}$ d. 1

113. Which of the following statement is a tautology?
 a. $(p \vee q) \vee (\sim p)$
 b. $(\sim q \wedge p) \vee (p \vee \sim p)$
 c. Both (a) and (b)
 d. None of the above
114. If a parallelogram is cut by two sets of m lines parallel to its sides, then the number of parallelogram thus formed, is
 a. ${}^m C_2 \times {}^m C_2$
 b. $2({}^{m+2} C_2)$
 c. $({}^{m+2} C_2)^2$
 d. None of these
115. The inverse of the function $f(x) = \log_a(x + \sqrt{x^2 + 1})$ (where, $a < 0, a \neq 1$) is
 a. $\frac{1}{2}(a^x - a^{-x})$
 b. not defined for all x
 c. defined for $x > 0$
 d. None of these
116. The value of $S = \sum_{n=1}^{\infty} \tan^{-1} \frac{2n}{n^4 + n^2 + 2}$ is equal to
 a. $\frac{\pi}{2}$
 b. π
 c. $\frac{\pi}{4}$
 d. None of these
117. Equation $\sin x + \cos(t+x) + \cos(t-x) = 2$ has real solution, then $\sin t$ can be
 a. $\frac{1}{2}$
 b. $\frac{3}{5}$
 c. $\frac{3}{4}$
 d. $-\frac{3}{4}$
118. A line makes angles α, β, γ with the coordinate axes. If $\alpha + \beta = \frac{\pi}{2}$, then $(\cos \alpha + \cos \beta + \cos \gamma)^2$ is equal to
 a. $1 + \cos 2\alpha$
 b. $1 - \sin 2\alpha$
 c. $1 + \sin 2\alpha$
 d. None of these
119. Straight lines $3x + 4y = 5$ and $4x - 3y = 15$ intersect at the point A . If point B and C are chosen on these two lines such that $AB = AC$, then the possible equation of the line BC passing through the point $(1, 2)$ is
 a. $x + 7y + 13 = 0$ or $7x + y + 9 = 0$
 b. $x + 7y + 13 = 0$ or $7x + 2y + 7 = 0$
 c. $x - 7y + 13 = 0$ or $7x + y - 9 = 0$
 d. None of the above
120. Normals drawn to $y^2 = 4ax$ at the points where it is intersected by the line $y = mx + c$ intersected at P . Coordinates of foot of the another normal drawn to the parabola from the point ' P ' is
 a. $\left(\frac{a}{m^2}, -\frac{2a}{m}\right)$
 b. $\frac{9}{m}, -\frac{6a}{m}$
 c. $(am^2, -2am)$
 d. $\left(\frac{4a}{m^2}, -\frac{4a}{m}\right)$
121. The area of the triangle formed by joining the origin to the point of intersection of the line $x\sqrt{5} + 2y = 3\sqrt{5}$ and circle $x^2 + y^2 = 10$ is
 a. 3
 b. 4
 c. 5
 d. 6
122. Radius of the largest circle which passes through the focus of the parabola $y^2 = 4x$ and contained in it, is
 a. 8
 b. 4
 c. 2
 d. 5
123. A tangent drawn to hyperbola $\frac{x^2}{a^2} - \frac{y^2}{b^2} = 1$ at $P\left(\frac{\pi}{6}\right)$ forms a triangle of area $3a^2$ square units, with coordinate axes. If the eccentricity of hyperbola is e , then the value of $e^2 - 9$ is
 a. 9
 b. 10
 c. 11
 d. 8
124. If the sum of squares of distances of a point from the planes $x + y + z = 0$, $x - z = 0$ and $x - 2y + z = 0$ is p^2 , then locus of the point is
 a. $x^2 + z^2 = p^2$
 b. $x^2 + 2xy + y^2 + z^2 = p^2$
 c. $x + y + z = p^2$
 d. $x^2 + y^2 + z^2 = p^2$
125. Line $\frac{(x+1)}{\lambda} = y - 1 = \frac{(z+2)}{-4}$ is perpendicular to $2x + 2y - 8z + 5 = 0$, then λ is
 a. 1
 b. -4
 c. -5
 d. -3
126. $OPQR$ is a square and M, N are the middle points of the sides PQ and QR respectively, then the ratio of the areas of the square and $\triangle OMN$ is
 a. 4 : 1
 b. 2 : 1
 c. 8 : 3
 d. 4 : 3
127. The line passing through the extremity A of the major axis and extremity B of the minor axis of the ellipse $x^2 + 9y^2 = 9$ meets its auxiliary circle at the point M . Then, the area of the triangle with vertices at A, M and the origin O is
 a. $\frac{31}{10}$
 b. $\frac{29}{10}$
 c. $\frac{21}{10}$
 d. $\frac{27}{10}$
128. If e_1 and e_2 are the eccentricities of a hyperbola $3x^2 - 3y^2 = 25$ and its conjugate, then
 a. $e_1^2 + e_2^2 = 2$
 b. $e_1^2 + e_2^2 = 4$
 c. $e_1 + e_2 = 4$
 d. $e_1 + e_2 = \sqrt{2}$

12 SELF STUDY GUIDE BITSAT

129. Let $f: R \rightarrow R$ be a function satisfying $f(x+y) = f(x) + 2y^2 + kxy$ for all $x, y \in R$. If $f(1) = 2$ and $f(2) = 8$, then $f(x)$ is equal to
- $2x^2$
 - $6x - 4$
 - $x^2 + 3x - 2$
 - $-x^2 + 9x - 6$
130. If the planes $\mathbf{r}(2\hat{i} - \lambda\hat{j} + 3\hat{k}) = 0$ and $\mathbf{r} \cdot (\lambda\hat{i} + 5\hat{j} - \hat{k}) = 5$ are perpendicular to each other, then the value of $\lambda^2 + \lambda$ is
- 0
 - 2
 - 1
 - 3
131. Solution of the differential equation $\frac{dy}{dx} = \sin(x+y) + \cos(x+y)$ is equal to
- $\log\left(2 + \sec\frac{x+y}{2}\right) = x + C$
 - $\log(1 + \tan(x+y)) = x + C$
 - $\log\left(1 + \tan\frac{x+y}{2}\right) = y + C$
 - $\log\left(1 + \tan\frac{x+y}{2}\right) = x + C$
132. The value of α , so that $\lim_{x \rightarrow 0} \frac{1}{x^2} (e^{\alpha x} - e^x - x) = \frac{3}{2}$, is
- 1
 - 0
 - 4
 - 2
133. An inverted conical flask is being filled with water at the rate of $3 \text{ cm}^3/\text{sec}$. The height of the flask is 10 cm and the radius of the base is 5 cm. How fast is the water level rising when the level is 4 cm?
- $\frac{4}{3} \pi \text{ cm/sec}$
 - $\frac{3}{4\pi} \text{ cm/sec}$
 - $\frac{3\pi}{4} \text{ cm/sec}$
 - $\frac{4}{3\pi} \text{ cm/sec}$
134. The equation of the curve whose slope at any point is equal to $y + 2x$ and which passes through the origin is
- $y = 2(x - 1)$
 - $y = 2(e^x - x - 1)$
 - $y = 2(e^x - 1)$
 - $y = 2(e^x x - 1)$
135. Let $f(x) = \begin{cases} x^p \sin \frac{1}{x}, & x \neq 0 \\ 0, & x = 0 \end{cases}$, then $f(x)$ is continuous but not differentiable at $x = 0$, if
- $p < 0$
 - $p = 0$
 - $0 < p \leq 1$
 - $p \geq 1$
136. The solution of the differential equation $\frac{d^2y}{dx^2} = \sin 3x + e^x + x^2$ when $y_1(0) = 1$ and $y(0) = 0$, is
- $-\frac{\sin 3x}{9} + e^x + \frac{x^4}{12} + \frac{1}{3}x - 1$
 - $-\frac{\sin 3x}{9} + e^x + \frac{x^4}{12} + \frac{1}{3}x$
 - $-\frac{\cos 3x}{9} + e^x + \frac{x^4}{12} + \frac{1}{3}x + 1$
 - None of the above
137. For which interval the given function $f(x) = -2x^3 - 9x^2 - 12x + 1$ is decreasing?
- $(-2, \infty)$
 - $(-2, -1)$
 - $(-\infty, -1)$
 - $(-\infty, -2)$ or $(-1, \infty)$
138. If θ is the angle between the vectors $4(i - k)$ and $\hat{i} + \hat{j} + \hat{k}$, then $(\sin \theta + \cos \theta)$ equals to
- 0
 - $\frac{1}{2}$
 - 1
 - 2
139. In a $\triangle ABC$, D, E, F are the mid-points of the sides BC, CA and AB respectively, the vector $\overrightarrow{AD}$ is equal to
- $\overrightarrow{BE} + \overrightarrow{CF}$
 - $\overrightarrow{BE} - \overrightarrow{CF}$
 - $\overrightarrow{CF} - \overrightarrow{BE}$
 - $-\overrightarrow{BE} - \overrightarrow{CF}$
140. The arithmetic mean of a set of observation is $\bar{X}$. If each observation is divided by α and increased by 10, then the mean of the new series is
- $\frac{\bar{X}}{\alpha}$
 - $\frac{\bar{X} + 10}{\alpha}$
 - $\frac{\bar{X} + 10\alpha}{\alpha}$
 - $\alpha\bar{X} + 10$
141. If h is the altitude of a parallelopiped determined by the vectors $\mathbf{a}, \mathbf{b}, \mathbf{c}$ and the base is taken to be the parallelogram determined by $\mathbf{a}$ and $\mathbf{b}$ where $\mathbf{a} = \hat{i} + \hat{j} + \hat{k}$, $\mathbf{b} = 2\hat{i} + 4\hat{j} - \hat{k}$ and $\mathbf{c} = \hat{i} + \hat{j} + 3\hat{k}$, then the value of $19h^2$ is
- 19
 - 16
 - 8
 - None of these
142. The mean and variance of a Binomial distribution ($\overrightarrow{BD}$) for 3 trials is 2.7, then the $\overrightarrow{BD}$ is given by
- $(0.2 + 0.8)^5$
 - $(0.3 + 0.7)^5$
 - $(0.4 + 0.6)^5$
 - None of these
143. Let $P(x) = \int \frac{dx}{e^x + 8e^{-x} + 4e^{-3x}}$, $Q(x) = \int \frac{dx}{e^{3x} + 8e^x + 4e^{-x}}$ and $R(x) = P(x) - 2Q(x)$. If $R(x) = \frac{1}{2} A \left(\frac{B + 2e^{-x}}{C} \right) + K$, then the value of (A, B, C) is
- $(\tan^{-1}, 2, e^x)$
 - $(\tan^{-1}, e^x, 2)$
 - $\left(\tan^{-1}, \frac{1}{2}, \frac{1}{e^x} \right)$
 - $\left(\tan^{-1}, \frac{1}{e^x}, \frac{1}{2} \right)$

144. The value of $\int_0^1 \cot^{-1}(1-x+x^2)dx$ is

- a. $\log 2$
- b. $\frac{\pi}{2} - \log 2$
- c. $\frac{\pi}{2} + \log 2$
- d. $-\log 2$

145. The area of the region included between the curves $x^2 + y^2 = a^2$ and $\sqrt{|x|} + \sqrt{|y|} = \sqrt{a}$ ($a > 0$), is

- a. $\left(\pi - \frac{2}{3}\right)a^2$ sq units
- b. $\left(\frac{2}{3} - \pi\right)a^2$ sq units
- c. $\frac{2}{3}\pi a^2$ sq units
- d. $\left(\pi + \frac{2}{3}\right)a^2$ sq units

146. Let A and B are two independent events. If the probability that both A and B occur together is $\frac{1}{6}$ and the probability that neither of them occurs is $\frac{1}{3}$, then the probability of occurrence of A is

- a. 0 or 1
- b. $\frac{1}{2}$ or $\frac{1}{3}$
- c. $\frac{1}{2}$ or $\frac{1}{4}$
- d. $\frac{1}{3}$ or $\frac{1}{4}$

147. In a test an examiner either guesses or copies or knows the answer to a multiple choice question with 4 choices.

The probability that he/she makes a guess is $\frac{1}{3}$. The

probability that he/she copies the answer is $\frac{1}{6}$. If the

probability that the answer is correct, given that he/she copied, it is $\frac{1}{8}$, then the probability that he/she knows

the answer to a question given that he/she correctly answered it, is

- a. $\frac{27}{29}$
- b. $\frac{26}{29}$
- c. $\frac{25}{29}$
- d. $\frac{24}{29}$

148. If $p : 4$ is an even prime number, $q : 6$ is a divisor of 12 and $r : \text{the HCF of 4 and 6 is 2}$, then which of the following is correct?

- a. $(p \wedge q)$
- b. $(p \vee q) \wedge \sim r$
- c. $\sim (q \wedge r) \vee p$
- d. $\sim p \vee (q \wedge r)$

149. The maximum value of $Z = 4x + 2y$ subject to constraints $2x + 3y \leq 18$, $x + y \geq 10$ and $x, y \geq 0$ is

- a. 20
- b. 36
- c. 40
- d. None of these

150. The coordinates of the point at which minimum value of $Z = 7x - 8y$ subject to constraints $x + y - 20 \leq 0$, $y \geq 5$, $x \geq 0$, $y \geq 0$ is attained, is

- a. (20, 0)
- b. (15, 5)
- c. (0, 5)
- d. (0, 20)

SOLUTIONS

Physics

1. (a) As the inductors are in parallel, induced emf across the two inductors is the same, i.e.

$$e_1 = e_2$$

$$L_1 \left(\frac{di_1}{dt} \right) = L_2 \left(\frac{di_2}{dt} \right)$$

On integrating both sides, we get

$$L_1 \int \frac{di_1}{dt} = L_2 \int \frac{di_2}{dt}$$

$$L_1 i_1 = L_2 i_2$$

$$\Rightarrow \frac{i_1}{i_2} = \frac{L_2}{L_1}$$

2. (a) We have, the time constant, $\tau = RC'$... (i)

$$\text{Now, } C' = \frac{C_1 C_2}{C_1 + C_2}$$

$$= \frac{\left(\frac{A \epsilon_0}{d-x} \right) \left(\frac{KA \epsilon_0}{x} \right)}{\frac{A \epsilon_0}{d-x} + \frac{KA \epsilon_0}{x}}$$

$$\therefore C' = \frac{KA \epsilon_0}{x + K(d-x)}$$

Putting the value of C' in Eq. (i), we get

$$\tau = \frac{RKA \epsilon_0}{\frac{d}{3} - vt + K \left(d - \frac{d}{3} + vt \right)} \left[\because x = \frac{d}{3} - vt \right]$$

Given, $A = 1$ and $K = 2$

$$\therefore \tau = \frac{3 \times 2 \epsilon_0 \times R}{d - 3vt + 6d - 2d + 6vt} = \frac{6R \epsilon_0}{5d + 3vt}$$

3. (a) According to principle of calorimetry,
heat gained = heat lost

Heat is lost by steam in two stages

- (i) Change of state from steam at 100°C to water at 100°C is $m \times 540$.

- (ii) To change water at 100°C to water at 80°C is $m \times 1 \times (100 - 80)$, where m is the mass of the steam condensed.

Total heat lost by steam is

$$m \times 540 + m \times 20 = m(540 + 20) = 560m$$

Heat gained by calorimeter and its contents is

$$(11 + 0.2) \times (80 - 15) = 1.12 \times 65 \text{ cal}$$

$$\Rightarrow 560m = 1.12 \times 65$$

$$\Rightarrow m = \frac{1.12 \times 65}{560} = 0.130 \text{ kg}$$

4. (b) As, gravitational constant,

$$[G] = [M^{-1}L^3T^{-2}]$$

Planck's constant, $[h] = [ML^2T^{-1}]$

$$\text{Hence, } [G][h] = [M^{-1}L^3T^{-2}][ML^2T^{-1}]$$

$$= [M^0L^5T^{-3}]$$

Velocity of light, $[c] = [LT^{-1}]$

Now,

$$\left[\frac{Gh}{c^3} \right]^{1/2} = \frac{[L^5T^{-3}]^{1/2}}{[L^3T^{-3}]^{1/2}}$$

$$= [L^2]^{1/2} = [L]$$

Hence, $[L] = \text{length}$

5. (b) Given, $Q = 10^6 \text{ cal}$

$$T_1 = 827^\circ\text{C} = (827 + 273) = 1100 \text{ K}$$

$$T_2 = 27^\circ\text{C} = (27 + 273) = 300 \text{ K}$$

$$\text{As, } \frac{Q_1}{T_1} = \frac{Q_2}{T_2}$$

$$\therefore Q_2 = \frac{T_2}{T_1} Q_1 = \frac{300}{1100} \times 10^6$$

$$= 2.72 \times 10^5 \text{ cal}$$

Efficiency of the engine,

$$\eta = \left(1 - \frac{T_2}{T_1} \right) \times 100$$

$$\eta = \left(1 - \frac{300}{1100} \right) \times 100$$

$$= 72.72\%$$

6. (a) According to Doppler's effect, the approximate frequency heard by the stationary observer,

$$v = \frac{v}{v - v_s} v_0$$

Case (i) $v_s = 34 \text{ m/s}$

where, v = speed of sound in air,

u_s = speed of source

and v_0 = frequency of the source.

$$\therefore v_1 = \frac{340}{340 - 34} v_0$$

$$= \frac{340}{306} v_0 \quad \dots (i)$$

Case (ii) $v_s = 17 \text{ m/s}$

$$\therefore v_2 = \frac{340}{340 - 17} v_0 = \frac{340}{323} v_0 \quad \dots (ii)$$

16 SELF STUDY GUIDE BITSAT

From Eqs. (i) and (ii), we get

$$\therefore \frac{v_1}{v_2} = \frac{340/306}{340/323} \Rightarrow \frac{323}{306} \approx \frac{19}{18}$$

7. (b) Given, $m = 5 \text{ kg}$, $v = 20 \text{ ms}^{-1}$, $\theta = 60^\circ$

Vertical component of velocity, $v_y = v \sin 60^\circ$

$$= 20 \times \frac{\sqrt{3}}{2} = 10\sqrt{3} \text{ ms}^{-1}$$

Time taken to reach the highest point = Time taken to reach the ground from highest point.

$$t = \frac{v \sin \theta}{g} = \frac{v_y}{g} = \frac{10\sqrt{3}}{9.8} = 1.77 \text{ s}$$

If the highest point, m splits up into two parts of masses $m_1 = 1 \text{ kg}$ and $m_2 = 4 \text{ kg}$.

If their velocities v_1 and v_2 respectively, then applying the principle of conservation of linear momentum, we get

$$m_1 v_1 + m_2 v_2 = mv \cos \theta$$

$$v_1 + v_2 = 5 \times 20 \times \frac{1}{2} \quad [\because \theta = 60^\circ]$$

$$v_1 + 4v_2 = 5 \times 10 = 50 \quad \dots (i)$$

$$\text{Initial KE} = \frac{1}{2} m (v \cos \theta)^2$$

$$= \frac{1}{2} \times 5 \times (10)^2 = 250 \text{ J}$$

Final KE = 2 (initial KE) = $2 \times 250 = 500 \text{ J}$

$$\therefore \frac{1}{2} m_1 v_1^2 + \frac{1}{2} m_2 v_2^2 = 500$$

$$\text{or} \quad \frac{1}{2} \times 1 \times v_1^2 + \frac{1}{2} \times 4 \times v_2^2 = 500$$

$$\text{or} \quad v_1^2 + 4v_2^2 = 1000 \quad \dots (ii)$$

Solving Eqs. (i) and (ii), we get

$$v_1 = 30 \text{ m/s}, v_2 = 5 \text{ m/s}$$

Hence, the separation between the two fragments

$$= (v_1 - v_2) \times t = (30 - 5) \times 1.77 \text{ m} = 44.25 \text{ m}$$

8. (d) Given, initial speed, $u = 36 \text{ km/h}$

$$= \frac{36 \times 1000}{60 \times 60} = 10 \text{ ms}^{-1}$$

$$\theta = 30^\circ, \mu = 0.1, s = ?$$

Here, work done in moving up the inclined road

$$= \text{KE of the vehicle}$$

$$(mg \sin \theta + F)s = \frac{1}{2} mu^2$$

$$(mg \sin \theta + \mu R) \times s = \frac{1}{2} mu^2$$

$$(mg \sin \theta + \mu mg \cos \theta) \times s = \frac{1}{2} mu^2$$

$$s = \frac{\frac{1}{2} mu^2}{mg(\sin \theta + \mu \cos \theta)} = \frac{u^2}{2g(\sin \theta + \mu \cos \theta)}$$

$$= \frac{10 \times 10}{2 \times 10 \times (\sin 30^\circ + 0.1 \cos 30^\circ)} = 8.53 \text{ m}$$

$$9. (b) P = 15 + 6 = 21 \Omega, Q = \frac{8X}{8+X} + 3$$

$$R = 15 + \frac{6 \times 6}{6+6} = 18 \Omega, S = 4 + \frac{4 \times 4}{4+4} = 6 \Omega$$

$$\text{As, } \frac{P}{Q} = \frac{R}{S}, \text{ so } Q = \frac{PS}{R} = \frac{21 \times 6}{18} = 7 \Omega$$

$$3 + \frac{8X}{8+X} = 7 \Rightarrow X = 8 \Omega$$

10. (d) Let V be the volume of the block. When block floats in

$$\text{water, then } V \rho_{\text{block}} g = \left(\frac{4}{5} V \right) \rho_{\text{water}} g$$

$$\text{or} \quad \rho_{\text{block}} = \frac{4}{5} \rho_{\text{water}} \quad \dots (i)$$

When block floats in liquid.

$$V \rho_{\text{block}} g = V \rho_{\text{liquid}} g$$

$$\rho_{\text{block}} = \rho_{\text{liquid}}$$

$$\rho_{\text{liquid}} = \frac{4}{5} \rho_{\text{water}} \quad [\text{from Eq. (i)}]$$

$$= \frac{4}{5} \times 10^3 \text{ kg m}^{-3}$$

$$= 800 \text{ kg m}^{-3}$$

11. (d) The angle, subtended by arc DE at O is $\frac{\pi}{2}$ and FC at

$O = \frac{3\pi}{2}$ the effective magnetic field at O is

$$B = B_{DE} + B_{FC}$$

$$= \frac{\mu_0 i}{4\pi 3r} \times \frac{\pi}{2} + \frac{\mu_0 i}{4\pi r} \times \left(\frac{3\pi}{2} \right)$$

$$= \frac{\mu_0 i}{8r} \left[\frac{1}{3} + 3 \right]$$

$$= \frac{5\mu_0 i}{12r} \text{ acting downwards}$$

12. (a) The electron moving with a speed v in the circular Bohr orbit of radius r constitutes a current of magnitude.

$i = \frac{e}{T}$, where T is the orbital period of the electron.

$$T = 2\pi r / v$$

$$i = \frac{ev}{2\pi r}$$

By definition of atomic dipole moment μ_i , its magnitude is given by

$$\mu_i = iA = \frac{ev}{2\pi r} \cdot \pi r^2 = \frac{evr}{2}$$

$\therefore$ Angular momentum, $L = mvr$

$$\therefore \frac{L}{\mu_i} = \frac{2mvr}{evr} = \frac{2m}{e} = \text{constant}$$

13. (c) Let T_0 be the temperature of point C and x be the length of rod AB or BC .

$$\text{Then, } CA = \sqrt{x^2 + x^2} = \sqrt{2} x$$

At steady state, the rate of heat flowing from B to C = rate of heat flowing from C to A .

$$\text{So, } \frac{KA(\sqrt{2}T - T_0)}{x} = \frac{KA(T_0 - T)}{\sqrt{2}x}$$

$$\sqrt{2}(\sqrt{2}T - T_0) = T_0 - T$$

$$\text{By solving, } T_0 = \frac{3T}{(\sqrt{2} + 1)}$$

14. (b) At resonance, $X_L = X_C$ or $\omega L = \frac{1}{\omega C}$

Voltage across the series L - C combination,

$$V_2 = i(X_L - X_C) = 0$$

15. (c) $I = I_{\max} \cos^2\left(\frac{\phi}{2}\right)$

$$\frac{I_{\max}}{4} = I_{\max} \cos^2 \frac{\phi}{2}$$

$$\cos \frac{\phi}{2} = \frac{1}{2}$$

$$\frac{\phi}{2} = \frac{\pi}{3}$$

$$\Rightarrow \phi = \frac{2\pi}{3} = \left(\frac{2\pi}{\lambda}\right) \times \Delta x \quad \dots (i)$$

where, $\Delta x = d \sin \theta$

Putting the value of Δx in Eq. (i), we get

$$\sin \theta = \frac{\lambda}{3d}$$

$$\theta = \sin^{-1}\left(\frac{\lambda}{3d}\right)$$

16. (a) The bob filled completely with water has its centre of mass at its centre. The time period of oscillation is

$$T = 2\pi \sqrt{\frac{l}{g}}$$

As the water starts coming out of the bob, its centre of mass shifts vertically downward as a result effective length of the pendulum increases and hence its period also increases. When the bob is empty, again its centre of mass appears at its centre and as a result, the period of oscillation again reaches to its original value.

17. (a) On raising the temperature of the semiconductor, covalent bonds start breaking up and thus more charge carriers release. This will increase the value of n and as a result the rate of collision of charge carriers will increase. This will decrease the drift speed v .

18. (b) When a tennis ball falls on the ground and bounces back, its velocity and displacement changes in reverse direction while acceleration remains unchanged.

19. (b) Since, the lens is made up of two kinds of transparent material, it has two refractive indices for the incident beam of light. Hence, there will be two focal lengths of the lens and therefore two images will be observed.

20. (c) As we know,

$$L = I\omega$$

$$\Rightarrow L = I \times \frac{2\pi}{T}$$

$$L \propto \frac{1}{T}$$

Given, $T_2 = 2T$

$$\text{Hence, } \frac{L_1}{L_2} = \frac{2T}{T}$$

$$\Rightarrow L_2 = \frac{L_1}{2}$$

21. (a) Maximum stress = $\frac{\text{Maximum weight}}{\text{Cross-sectional area}}$

Now, maximum weight of steel wire

$$= \text{Volume} \times \text{Density} \times g$$

$$= A l \rho g$$

where, l is the maximum length of steel wire that can hang vertically without breaking, ρ is the density of steel and A is the cross-sectional area of steel wire.

$$\therefore \text{Maximum stress, } p = \frac{A l \rho g}{A} = l \rho g$$

$$\therefore l = \frac{p}{\rho g}$$

18 SELF STUDY GUIDE BITSAT

22. (c) $2h = ut$
 $u_x = \frac{2h}{\Delta t}$ $[\because u = u_x, t = \Delta t] \dots (i)$

$$h = u_y t - \frac{1}{2} g t^2$$

$$g t^2 - 2u_y t + 2h = 0$$

$$t_1 = \frac{2u_y + \sqrt{4u_y^2 - 8gh}}{2g}$$

$$t_2 = \frac{2u_y - \sqrt{4u_y^2 - 8gh}}{2g}$$

$$\Delta t = t_1 - t_2 = \frac{\sqrt{4u_y^2 - 8gh}}{g}$$

$$u_y^2 = \frac{g^2(\Delta t)^2}{4} + 2gh$$

$$u_x^2 + u_y^2 = u^2 = (2\sqrt{gh})^2$$

$$\frac{4h^2}{(\Delta t)^2} + \frac{g^2(\Delta t)^2}{4} + 2gh = 4gh$$

$$\frac{g^2}{4} (\Delta t)^4 - 2gh(\Delta t)^2 + 4h^2 = 0$$

$$(\Delta t)^2 = \frac{2gh \pm \sqrt{4g^2h^2 - 4g^2h^2}}{g^2/2} = \frac{4h}{g}$$

$$\Delta t = 2\sqrt{\frac{h}{g}}$$

23. (b) $s = ut + \frac{1}{2} at^2$, $a = g \sin \theta$, $u = 0$

Then, $s = 0 + \frac{1}{2} at^2$

or $t = \sqrt{\frac{2s}{a}} = \sqrt{\frac{2s}{g \sin \theta}}$ [for smooth plane]

For the rough plane, the effective value of acceleration along the incline is

$$a' = g \sin \theta - \mu_k g \cos \theta$$

and $t' = \sqrt{\frac{2s}{a}} = \sqrt{\frac{2s}{g \sin \theta - \mu_k g \cos \theta}}$

Now, $\frac{t'}{t} = n = \sqrt{\frac{g \sin \theta}{g \sin \theta - \mu_k g \cos \theta}}$
 $= \sqrt{\frac{\sin 45^\circ}{\sin 45^\circ - \mu_k \cos 45^\circ}}$
 $= \sqrt{\frac{1}{1 - \mu_k}}$

$$\Rightarrow \frac{1}{n^2} = 1 - \mu_k \Rightarrow \mu_k = 1 - \frac{1}{n^2}$$

24. (c) Since, the initial activity is 50 times the activity for safe occupancy, therefore $R_0 = 50R$, where $R = \lambda N$.

Since, $R \propto N$

$$\frac{R}{R_0} = \frac{N}{N_0} = \left(\frac{1}{2}\right)^n = \left(\frac{1}{2}\right)^{t/T}$$

or $\left(\frac{1}{2}\right)^{t/10} = \frac{1}{50}$

$$(2)^{t/10} = 50 \Rightarrow \frac{t}{10} \log_{10} 2 = \log_{10} 50$$

$$\Rightarrow t = \frac{10 \log_{10} 50}{\log_{10} 2} = \frac{10 \times 1.699}{0.301} = 56.4 \text{ days}$$

25. (a) Helium is monoatomic gas, for which

$$C_V = \frac{3}{2} R, C_p = \frac{5}{2} R$$

Work done by the gas in one complete cycle $W = \text{area } ABCDA = p_0 V_0$

From A to B,

Heat given to gas $= nC_V \Delta T$

$$= 1 \times \left(\frac{3}{2} R\right) \times \Delta T = \frac{3}{2} V_0 (\Delta p) = \frac{3}{2} V_0 p_0$$

From B to C, heat given to gas $= nC_p \Delta T$

$$= 1 \times \left(\frac{5}{2} R\right) \times \Delta T = \frac{5}{2} (2p_0) \Delta V = 5p_0 V_0$$

Efficiency of cycle $= \frac{\text{Work done by the gas / cycle}}{\text{Total heat given to gas / cycle}}$

$$= \frac{p_0 V_0}{\frac{3}{2} p_0 V_0 + 5p_0 V_0} = \frac{2}{13}$$

$$\text{Efficiency (\%)} = \frac{2}{13} \times 100 = 15.4\%$$

26. (a) Using Einstein's photoelectric equations,

$$h\nu = \phi + eV_s$$

$$eV_s = h\nu - \phi \dots (i)$$

Thus, when the frequency of incident light radiation (photons) ν increases to 2ν , the stopping potential V_s changes to V'_s .

$$eV'_s = h(2\nu) - \phi \dots (ii)$$

On dividing Eq. (ii) by Eq. (i), we get

$$\frac{V'_s}{V_s} = \frac{2h\nu - \phi}{h\nu - \phi} = \frac{2h\nu - 2\phi + \phi}{h\nu - \phi} = \frac{2(h\nu - \phi) + \phi}{h\nu - \phi} = 2 + \frac{\phi}{h\nu - \phi}$$

$$\therefore \frac{V'_s}{V_s} > 2 \Rightarrow V'_s > 2V_s$$

27. (c) Terminal velocity of the rod is attained when magnetic force on the rod (Bi) balances the component of weight of the rod ($mg \sin \theta$), as in figure.

So, $Bi = mg \sin \theta$

$$B \left(\frac{e}{R} \right) l = mg \sin \theta$$

$$\frac{Ble}{R} = mg \sin \theta$$

$$\frac{Bl(Blv_T)}{R} = mg \sin \theta$$

$$v_T = \frac{mg \sin \theta R}{B^2 l^2}$$

28. (c) Initial energy of the asteroid is

$$E_i = K_i + U_i = \frac{1}{2}mv_i^2 - \frac{GM_e m}{10R_e}$$

Final energy of the asteroid,

$$E_f = \frac{1}{2}mv_f^2 - \frac{GM_e m}{R_e}$$

According to law of conservation of energy, $E_i = E_f$

$$\frac{1}{2}mv_i^2 - \frac{GM_e m}{10R_e} = \frac{1}{2}mv_f^2 - \frac{GM_e m}{R_e}$$

$$v_f^2 - \frac{2GM_e}{R_e} = v_i^2 - \frac{2GM_e}{10R_e}$$

$$\Rightarrow v_f^2 = v_i^2 + \frac{2GM_e}{R_e} \left(1 - \frac{1}{10} \right)$$

29. (b) From Einstein photoelectric equation,

$$E = \phi_0 + KE_{\max}$$

$$\text{For metal A} \quad 4 = \phi_A + T_A \quad \dots (i)$$

$$\text{For metal B} \quad 4.5 = \phi_B + (T_A - 1.5) \quad \dots (ii)$$

From Eqs. (i) and (ii), we get

$$\phi_B - \phi_A = 2$$

Now, according to de-Broglie hypothesis,

$$\lambda_A = \frac{h}{mv} = \frac{h}{\sqrt{2mT_A}}$$

$$\text{Similarly, } \lambda_B = \frac{h}{\sqrt{2mT_B}}$$

$$\therefore \frac{\lambda_A}{\lambda_B} = \sqrt{\frac{T_B}{T_A}} = \sqrt{\frac{T_A - 1.5}{T_A}} = \left(1 - \frac{1.5}{T_A} \right)^{1/2}$$

$$\left(\frac{1}{2} \right)^2 = 1 - \frac{1.5}{T_A}$$

On solving, $T_A = 2.0 \text{ eV}$

$$\text{So, } \phi_A = 4 - T_A = 4 - 2 = 2.0 \text{ eV}$$

$$\phi_B = 6 - T_A = 6 - 2 = 4.0 \text{ eV}$$

30. (a) We have,

$$\text{Torque} = r \times F = I\alpha$$

$$\text{So, } 2(20t - 5t^2) = 10\alpha$$

$$\alpha = 4t - t^2$$

But $\alpha = \frac{d\omega}{dt}$, so

$$\frac{d\omega}{dt} = 4t - t^2$$

$$d\omega = (4t - t^2) dt$$

$$\text{Integrating, } \omega = 2t^2 - \frac{t^3}{3}$$

ω will be zero at $t = 6 \text{ s}$.

$$\text{So, } \omega = \frac{d\theta}{dt} = 2t^2 - \frac{t^3}{3}$$

$$\text{or } d\theta = \left(2t^2 - \frac{t^3}{3} \right) dt$$

Again, integrating both sides

$$\theta = \frac{2t^3}{3} - \frac{t^4}{12}$$

Since, $t = 6 \text{ s}$

$$\text{so, } \theta = \frac{2 \times 6^3}{3} - \frac{6^4}{12} = 36$$

$$\text{Number of turns, } n = \frac{\theta}{2\pi} = \frac{36}{2\pi} = 5.73$$

So, option (a) is right.

31. (c)

(a)

(b)

In first case refraction of the rays, takes place from a plane

surface, so we can use $d_{\text{app}} = \frac{d_{\text{actual}}}{\mu}$

$$3 = \frac{4}{\mu} \Rightarrow \mu = \frac{4}{3}$$

where, d_{app} and d_{actual} = apparent and real depth, respectively.

Now, in second case, as from Fig. (b), refraction takes place from a spherical surface, so

$$\frac{\mu_2}{v} - \frac{\mu_1}{u} = \frac{\mu_2 - \mu_1}{R}$$

or $\frac{1}{(-25/8)} - \frac{4/3}{(-4)} = \frac{1-4/3}{-R}$

or $\frac{1}{3R} = \frac{1}{3} - \frac{8}{25} = \frac{1}{75}$

$$R = 25 \text{ cm}$$

Now, using Lens' Makers formula, to calculate focal length

$$\frac{1}{f} = (\mu - 1) \left(\frac{1}{R_1} - \frac{1}{R_2} \right)$$

$$\frac{1}{f} = \left(\frac{4}{3} - 1 \right) \left(\frac{1}{\infty} - \frac{1}{(-25)} \right) = \frac{1}{75}$$

$$f = 75 \text{ cm}$$

32. (c) When $r \leq R$, then force on the test mass m at the surface of the sphere $= mg$

Force on the test mass at distance r from the centre of sphere is

If $r < R$, then $F = \frac{GMm}{R^2} \cdot \frac{r}{R} = \frac{GMm}{R^3} \cdot r$

$$\therefore \frac{mv^2}{r} = \frac{GMm}{R^3} \cdot r$$

$$\therefore v \propto r$$

If $r > R$, then $F = \frac{GMm}{r^2}$

$$\therefore \frac{Mv^2}{r} = \frac{GMm}{r^2}$$

$$\therefore v \propto \frac{1}{\sqrt{r}}$$

Hence, option (c) is correct.

33. (c) In the given circuit, diode D_1 is reverse biased, so it will not conduct but D_2, D_3 are forward biased, so they will conduct, hence corresponding equivalent circuit. For the given circuit is

Now, the equivalent resistance of the circuit is

$$R_{eq} = \frac{(5+5) \times 20}{(5+5) + 20} + \frac{20}{3} \Omega$$

Current through battery, $I = \frac{10V}{\frac{20}{3} \Omega} = 1.5 \text{ A}$

34. (a) Since, no external force is acting on the system, we can apply conservation of linear momentum.

$$\text{Speed of 200 kg trolley} = \frac{36 \times 1000}{60 \times 60} = 10 \text{ ms}^{-1}$$

If u be the initial velocity of trolley, v_b be the absolute velocity of the boy after the beginning of journey of the boy, their relative velocity is 4.

$$\text{So, } v' - v_b = 4 \Rightarrow v_b = (v' - 4)$$

Now, applying law of conservation of momentum,

Momentum before the boy begins to run
 = Momentum after the beginning of boy's running

$$\Rightarrow 220 \times 10 = 200 v' + 20(v' - 4)$$

$$2200 = 220 v' - 80 \Rightarrow 220 v' = 2280$$

$$v' = \frac{2280}{220} = 10.36 \text{ ms}^{-1}$$

35. (c) Given, $C = 37.55 \text{ J mol}^{-1} \text{ K}^{-1}$

Also, $pT = \text{constant } (K)$... (i)

According to ideal gas equation, $pV = RT$

$$\Rightarrow p = \frac{RT}{V} \quad \dots \text{ (ii)}$$

Putting the value of p in Eq. (i), we get

$$\frac{RT}{V} \times T = K \Rightarrow V = \frac{RT^2}{K}$$

On differentiating above equation both sides, we get

$$\frac{dV}{dT} = \frac{2RT}{K} \quad \dots \text{ (iii)}$$

But $\frac{T}{K} = \frac{1}{p}$ [from Eq. (i)]

Hence, Eq. (iii) becomes

$$\frac{dV}{dT} = \frac{2R}{p}$$

So, $C = C_V + \frac{pdV}{dT}$

or $C = C_V + \frac{p \times 2R}{p} = C_V + 2R$

or $C_V = C - 2R$... (iv)

As $C_V = \frac{nR}{2}$, where n = number of degrees of freedom.

Putting the value of C_V in Eq. (iv), we get

$$\frac{nR}{2} = C - 2R$$

$$n = \frac{2(C - 2R)}{R} = \frac{2(37.55 - 2 \times 8.3)}{8.3} = 5.048 \approx 5$$

36. (a) We know, instantaneous displacement,

$$x = r \sin \omega t$$

$$\therefore \text{Instantaneous velocity, } v = \frac{dx}{dt} = r\omega \cos \omega t$$

$$\therefore \text{Instantaneous acceleration,}$$

$$a = \frac{dv}{dt} = -r\omega^2 \sin \omega t = -\omega^2 x$$

$$\text{So, } \frac{aT}{x} = \frac{-\omega^2 x \times T}{x} = -\omega^2 T = \frac{-4\pi^2}{T^2} \times T$$

$$= \frac{-4\pi^2}{T} = \text{constant}$$

$$\Rightarrow \frac{aT}{V} = \frac{-\omega^2 r \sin \omega t \times T}{\omega r \cos \omega t} = -\omega T \tan \omega t$$

$$= -\frac{2\pi}{T} \times T \tan \omega t = \text{not constant}$$

Similarly, $aT + 2\pi v$ and $a^2 T^2 + 4\pi^2 v^2$ is also not constant, i.e. both are function of t .

37. (d) New, current sensitivity, $I'_s = I_s + \frac{50}{100} I_s$

$$= \frac{150}{100} I_s = \frac{3}{2} I_s$$

New resistance, $R' = 2R$

Initial voltage sensitivity, $V_s = \frac{I_s}{R}$

Now, new voltage sensitivity,

$$V'_s = \frac{I'_s}{R'} = \frac{\frac{3}{2} I_s}{2R} = \frac{3}{4} V_s$$

% decrease in voltage sensitivity

$$= \frac{V_s - V'_s}{V_s} \times 100$$

$$= \left(1 - \frac{V'_s}{V_s}\right) \times 100$$

$$= \left(1 - \frac{3}{4}\right) \times 100 = 25\%$$

38. (a) For the uniformly accelerated/decelerated motion,

$$v^2 = u^2 \pm 2gh$$

So, from this equation, we can say v - h graph is parabola.

Initially, velocity is downwards ($-ve$), after collision, it reverses the direction with smaller magnitude and velocity is upwards ($+ve$). So, graph (a) satisfies these conditions.

Also,

When $t = 0$, $h = d$

Velocity increases downwards ($0 \rightarrow A$)

When $t = 1$, velocity reverses its direction ($A' \rightarrow B$)

39. (b) From the given circuit, we can say that I is independent of resistance R_5 , so no current flows through R_5 . This required that the junction of R_1 and R_2 is at the same potential as the junction of R_3 and R_4 ($\therefore$ Wheatstone bridge condition)

So, $\frac{R_1}{R_2} = \frac{R_3}{R_4}$

or $R_1 R_4 = R_3 R_2$

40. (d) Since, volume remains unchanged, during this phenomenon, so

$$\frac{4}{3} \pi R^3 = N \times \frac{4}{3} \pi r^3$$

$$N = \frac{R^3}{r^3}$$

Now, change in surface area $= 4\pi R^2 - N 4\pi r^2$

$$= 4\pi (R^2 - N r^2)$$

Energy released (ΔU) $= T \times \text{change in surface area}$

$$= T \times 4\pi [R^2 - N r^2]$$

Here, all this energy released is at the cost of lowering the temperature and mass of the big drop of liquid $= \frac{4}{3} \pi R^2 \rho$.

Now, change in temperature,

$$\Delta \theta = \frac{\Delta U}{ms}$$

$$= \frac{T \times 4\pi (R^2 - N r^2)}{\left(\frac{4}{3} \pi R^3 \rho\right) S}$$

$$= \frac{3T}{\rho S} \left(\frac{1}{R} - \frac{N r^2}{R^3}\right)$$

$$= \frac{3T}{\rho S} \left(\frac{1}{R} - \frac{R^3 \times r^2}{r^3 \times R^3}\right)$$

$$= \frac{3T}{\rho S} \left(\frac{1}{R} - \frac{1}{r}\right)$$

Chemistry

41. (d) Edge length of the unit cell =
- $2 \text{ \AA} = 2 \times 10^{-8} \text{ cm}$

$$\text{Volume of unit cell} = (2 \times 10^{-8})^3 = 8 \times 10^{-24} \text{ cm}^3$$

$$\text{Mass of one unit cell} = \text{volume} \times \text{density}$$

$$= 8 \times 10^{-24} \times 2.5$$

$$\text{Number of unit cell in 200g of metal}$$

$$= \frac{\text{mass of the metal}}{\text{mass of one unit cell}}$$

$$= \frac{200}{8 \times 10^{-24} \times 2.5} = 1 \times 10^{25}$$

42. (a) Higher the values of 'a' more will be the tendency to get liquefy. Value of
- a
- is highest for gas
- P
- . Thus, it is the most liquefiable gas among the given gases.

43. (d) Radius of hydrogen like atom,

$$r_n = \frac{n^2}{Z} r_0$$

$$\text{Where, } r_0 = 0.51 \times 10^{-10} \text{ m}$$

$$\text{and } r_n = \frac{0.51 \times 10^{-10} \text{ m}}{4}$$

$$\text{At ground state, } n = 1$$

$$\text{Hence, the atom is } \text{Be}^{3+} \quad [\because Z = 4]$$

44. (a) When central metal ion is same (here
- Ni^{2+}
-), the absorption of colour depends on the ligand. According to spectrochemical series, various ligands are as follows

Thus, H_2O is the weakest ligand among these, therefore the absorbed energy will be lowest in $[\text{Ni}(\text{H}_2\text{O})_6]^{2+}$, so it will absorb highest wavelength (red light).

$$E \propto \frac{1}{\lambda}$$

$\therefore$ The order of increasing wavelength is

45. (c) Empirical formula mass =
- $\text{CH}_2\text{O} = 12 + 2 + 1 \times 16 = 30$

$$\text{Molecular mass} = 180$$

$$n = \frac{\text{Molecular Mass}}{\text{Empirical formula mass}} = \frac{180}{30} = 6$$

$$\therefore \text{Molecular formula} = n \times \text{empirical formula}$$

$$\therefore \text{Molecular formula} = 6 \times \text{CH}_2\text{O} = \text{C}_6\text{H}_{12}\text{O}_6$$

46. (d) (i) In Hall-Heroult process for extraction of Al, carbon anode is oxidised to CO and
- CO_2
- .

- (ii) When
- Al_2O_3
- is mixed with
- CaF_2
- , it lowers the melting point of the mixture and brings conductivity.

- (iii)
- Al^{3+}
- is reduced at cathode to form Al.

- (iv)
- Al_2O_3
- serves as the electrolyte, undergoing the redox process.
- Na_3AlF_6
- although is an electrolyte but serves as a solvent, not electrolyte.

47. (c) Azo dye test is not used for the distinction in
- 1°
- ,
- 2°
- and
- 3°
- aliphatic amines. The other tests can be easily used to distinguish between
- 1°
- ,
- 2°
- and
- 3°
- amines.

Test	Primary amine	Secondary amine	Tertiary amine
i Hinsberg's reagent test	Forms a sulphonamide soluble in alkali	Forms a sulphonamide insoluble in alkali	No reaction
ii Carbylamine reaction	Forms a carbylamine with unpleasant smell	No reaction	No reaction
iii Reaction with nitrous acid	Forms primary alcohol and evolves nitrogen gas with effervescence	Forms nitrosamine which gives Libermann's nitroso amine reaction	Forms nitrite salt

48. (b) Resonating structure of carbonate
- CO_3^{2-}
- ion are

Thus, there is no coordinate bond present in CO_3^{2-} .

Hence, the second statement is incorrect.

49. (a) For first order reaction,

$$t_{1/2} = \frac{\ln 2}{k_1} = 40 \text{ s} \quad \dots(i)$$

$$\text{For zero order reaction, } t_{1/2} = \frac{[A]_0}{2k_0} = 20 \text{ s} \quad \dots(ii)$$

Divide eqn. (i) by (ii), we get

$$\frac{1}{2} = \frac{[A]_0}{2k_0} \times \frac{k_1}{\ln 2}$$

$$\frac{k_1}{k_0} = \frac{\ln 2}{[A]_0} = \frac{0.693}{1.386} = 0.5$$

50. (b)
- CH_2Cl_2
- is similar to
- CH_4
- (tetrahedral) but it has three different bond angles.

HCH , HCCl , ClCCl , which are close to but not equal to 109.5° . Since, electronegativity of $\text{Cl} > \text{C} > \text{H}$ the bond dipole moments do not cancel and the molecule has a dipole moment.

51. (b) Given,
- $\text{CH}_4 + 2\text{O}_2 \longrightarrow \text{CO}_2 + 2\text{H}_2\text{O}$
- ;

$$\Delta H = -210 \text{ kcal/mol} \quad \dots(i)$$

$$\Delta H = -368 \text{ kcal/mol} \quad \dots(ii)$$

On subtracting Eq. (i) from Eq (ii), we get

$$\Delta H = -158 \text{ kcal / mol}$$

$\therefore$ Enthalpy of combustion of one CH_2 unit

$$= -158 \text{ kcal / mol}$$

$$\begin{aligned} \Delta H_{\text{comb}}(\text{C}_{10}\text{H}_{22}) &= \Delta H_{\text{comb}}(\text{CH}_4) + 9 \times \Delta H_{\text{comb}}(\text{CH}_2) \\ &= -210 + (9 \times -158) \\ &= -1632 \text{ kcal} \end{aligned}$$

52. (b) $R-\text{C}\equiv\text{CH}$ is converted to ketone by catalytic hydration with reagents.

53. (c) By Heisenberg's uncertainty principle,

$$\Delta m \Delta v = \frac{h}{4\pi}$$

$$\Delta v = 0.005\% \text{ or } 600 \text{ m/s}$$

$$= \frac{600 \times 0.005}{100} = 0.03$$

$$\Delta x \times 9.1 \times 10^{-31} \times 0.03 = \frac{6.6 \times 10^{-34}}{4 \times 3.14}$$

$$\begin{aligned} \text{Hence, } \Delta x &= \frac{6.6 \times 10^{-34}}{4 \times 3.14 \times 0.03 \times 9.1 \times 10^{-31}} \\ &= 192 \times 10^{-3} \text{ m} \end{aligned}$$

54. (d) In O_2 molecule, two electrons are present in antibonding orbitals.

$$\text{O}_2 (8 + 8 = 16) = \sigma 1s^2, \sigma^* 1s^2, \sigma 2s^2, \sigma^* 2s^2,$$

$$\sigma^2 2pz^2, \pi 2px^2 = \pi 2py^2, \pi^* 2px = \pi^* 2py^1$$

Removal of one electron from the O_2 molecule gives O_2^+ in which the number of antibonding electrons is one less and hence, BO increases. Thus, removal of one electron from O_2 stabilises the molecule.

55. (c) $\text{Cu}^{2+} + 2e^- \longrightarrow \text{Cu} \quad \dots(i)$

According to Faraday's first law, when an electric current is passed through an electrolyte, amount of substance deposited is directly proportional to the quantity of electric charge passed through the electrolyte.

$\therefore$ 1 mol of 63.5g of Cu is obtained by passing 2F of electricity.

$$\text{Mass of Cu obtained by passing 1F of electricity} = \frac{63.5}{2} \text{ g}$$

$\therefore$ Mass of Cu obtained by passing 0.5F of electricity

$$= \frac{63.5}{2} \times 0.5 = 15.80 \text{ g}$$

57. (d) $\text{N}_2\text{O}_4(g) \rightleftharpoons 2\text{NO}_2(g)$
- 0.28 1.1

Pressure at equilibrium

$$K_p = \frac{p_{\text{NO}_2}^2}{p_{\text{N}_2\text{O}_4}} = \frac{(1.1)^2}{0.28} = 4.32 \text{ atm}$$

If volume of the container is doubled, the pressure will reduced to half

$$\begin{aligned} \text{New pressure, } \left[\frac{0.028}{2} - p \right] & \left[\frac{1.1}{2} + 2p \right] \\ K_p &= \frac{\left[\frac{1.1}{2} + 2p \right]^2}{\left[\frac{0.28}{2} - p \right]} = 4.32 \end{aligned}$$

On solving, we get

$$p = 0.045$$

$$\therefore p_{\text{N}_2\text{O}_4} = 0.14 - 0.045 = 0.095 \text{ atm}$$

$$p_{\text{NO}_2} = 0.55 + (2 \times 0.045) = 0.64 \text{ atm}$$

58. (a) Protoactinium (Pa) is the element that does not have stable electronic configuration.

$$\text{Protoactinium (Pa)} = [\text{Rn}] 5f^2 6d^1 7s^2 \text{ (Atomic number} = 91)$$

$$\text{Nobelium (No)} = [\text{Rn}] 5f^{14} 6d^0 7s^2 \text{ (Atomic number} = 102)$$

$$\text{Lawrencium (Lr)} = [\text{Rn}] 5f^{14} 6d^1 7s^2 \text{ (Atomic number} = 103)$$

$$\text{Americium (Am)} = [\text{Rn}] 5f^7 6d^0 7s^2 \text{ (Atomic number} = 95)$$

59. (c) Oxidation :

$$\text{Molecular mass (M) of } \text{CH}_3\text{CO} = 44 \text{ g mol}^{-1}$$

$$\text{Equivalent weight (Ew)} = \frac{M}{n\text{-factor}} = \frac{44}{2} = 22 \text{ g mol}^{-1}$$

60. (a) According to Freundlich adsorption isotherm,

$$x/m = k_p \frac{1}{n}$$

where, x = mass of gas adsorbed on mass ' m ' of the absorbent at pressure p .

k and n = constants.

24 SELF STUDY GUIDE BITSAT

Taking logarithm on both sides, we get

$$\log x / m = \log k + \frac{1}{n} \log p$$

This is equation of a straight line with slope of $\frac{1}{n}$ and intercept of $\log k$.

61. (b) Given, pH of $\text{Ba(OH)}_2 = 12$

$$\therefore \text{pH} + \text{pOH} = 14$$

$$\therefore \text{pOH} = 14 - \text{pH} = 14 - 12 = 2$$

$$\text{Now, } \text{pOH} = -\log [\text{OH}^-]$$

$$\Rightarrow 2 = -\log [\text{OH}^-]$$

$$[\text{OH}^-] = 10^{-2}$$

$$[\text{OH}^-] = 2S = 10^{-2}$$

$$\therefore S = 10^{-1}$$

$$K_{sp} = [\text{Ba}^{2+}] [\text{OH}^-]^2$$

$$\Rightarrow [10^{-1}] [10^{-2}]^2 = 0.5 \times 10^{-6} = 5 \times 10^{-7} \text{ M}$$

62. (c) With Tollen's reagent (ammoniacal AgNO_3), a white precipitate of silver salt is obtained

63. (d) Arrhenius equation is given by,

$$\log_{10} \frac{K_2}{K_1} = \frac{E_a}{2.303 \times R} \left[\frac{T_2 - T_1}{T_1 T_2} \right]$$

$$\text{Given, } \frac{K_2}{K_1} = 3; R = -8.314 \text{ JK}^{-1} \text{ mol}^{-1}$$

$$T_1 = 20 + 273 = 293 \text{ K}$$

$$\text{and } T_2 = 50 + 273 = 323 \text{ K}$$

Substituting the given values in Arrhenius equation,

$$\begin{aligned} \log_{10} 3 &= \frac{E_a}{8.314 \times 2.303} \left[\frac{323 - 293}{323 \times 293} \right] \\ E_a &= \frac{2.303 \times 8.314 \times 323 \times 293 \times 0.477}{30} \\ &= 28811.8 \text{ J mol}^{-1} \\ &= 28.8118 \text{ kJ mol}^{-1} \end{aligned}$$

64. (b) Compounds containing both N and S give blood red colour in Lassaigne's test due to the formation of Fe(SCN)_2 . Thus, $\text{H}_2\text{N}(\text{C}_6\text{H}_4)\text{SO}_3\text{H}$ gives blood red colour in Lassaigne's test of nitrogen.

65. (b) Given that,

Using Nernst equation,

$$E^\circ = \frac{2.303nRT}{nF} \log k_{eq}$$

$$E^\circ = \frac{0.0591}{n} \log k_{eq} \text{ (at } 25^\circ\text{C)}$$

$$\Rightarrow 0.2955 = \frac{0.0591}{2} \log k_{eq}$$

$$k_{eq} = 10^{10}$$

66. (b)

Since, gauche form is stabilised by intermolecular hydrogen bonding, hence it is more stable than anti.

67. (a) In acidic medium, H_2S is very feebly ionised giving very small concentration of sulphide ion for precipitation. Therefore, the most insoluble salts CuS and HgS are precipitated.

68. (b) When a mixture of BCl_3 and H_2 is subjected to silent electric discharge, diborane and HCl are formed. Diborane reacts with NH_3 at 200°C to give borazine (inorganic benzene).

69. (b) The process of producing *syn* gas or synthesis gas from coal is called 'coal gasification'?

The production of hydrogen can be increased by reaching carbon monoxide of the *syn* gas with steam in the presence of iron chromate as a catalyst at 673 K .

CO_2 is removed by scrubbing with a solution of sodium arsenite.

70. (b) Heat at constant pressure means enthalpy. i.e.

$$\Delta H = 2.5 \times 10^3 \text{ cal}$$

$$\Delta S = 7.4 \text{ cal deg}^{-1}$$

$$T = 298 \text{ K}$$

$$\Delta G = \Delta H - T\Delta S$$

$$= 2.5 \times 10^3 - 298 \times 7.4$$

$$= 4705 \text{ cal}$$

Hence, the process is spontaneous.

71. (a) The alkene is unsymmetrical, hence will follow Markownikoff's rule to give major product.

Since, y contains, a chiral carbon, it exists in two enantiomers (x and y) which are mirror images of each other.

72. (c) Silicons are synthetic organo-silicon polymers containing repeated $R_2\text{SiO}$ units. Since the empirical formula is same as that of a ketone ($R_2\text{CO}$), the name silicon has been given to these materials. They can be formed by hydrolysis of dichlorosilanes ($R_2\text{SiCl}_2$)

73. (c) On acidification of potassium chromate solution, yellow colour changes to orange colour due to formation of dichromate which suggests that monocentric complex is converted into dicentric complex.

74. (d) Valence electrons in A = 3

Valence electron in B = 6

Thus, A is electropositive and B is electronegative, A can loose three electrons and B can gain two electrons to attain stable configuration

Hence, A exist as A^{3+} and B as B^{2-}

$\therefore$ Compound formed is A_2B_3 .

75. (b)

This structure represents sucrose in which α -D-glucose and β -D fructose is attached to each other by $C_1 - C_2$ glycosidic linkage. Since reducing groups of glucose and fructose are involved in glycosidic bond formation, this is considered as non-reducing sugar.

76. (a) Potassium sulphate (K_2SO_4), $i = 3$

Sodium chloride (NaCl), $i = 2$

Urea, $i = 1$

Glucose, $i = 1$

Greater the value of i , greater lowering in freezing point and hence, lower will be the freezing temperature.

Therefore, K_2SO_4 solution has the lowest freezing point.

77. (a) A penicillin is a member of a family of drugs that have a four membered cyclic amide fused to a five membered thiazolidine ring. It is narrow spectrum antibiotic

78. (b) The lattice energy of the hydroxides of alkaline earth metal decreases more rapidly than their hydration energy leading to more negative value of ΔH_{sol} down the group. More negative is ΔH_{sol} , more is the solubility of compounds. Hence the solubility of hydroxides of alkaline earth metal increases with their atomic number.

79. (a) The given chemical reaction is

Rate law expression for the given reaction can be written as

$$-\frac{1}{5} \frac{\Delta[\text{Br}^-]}{\Delta t} = -\frac{\Delta[\text{BrO}_3^-]}{\Delta t}$$

$$-\frac{1}{6} \frac{\Delta[\text{H}^+]}{\Delta t} = +\frac{1}{3} \frac{\Delta[\text{Br}_2]}{\Delta t}$$

$$\Rightarrow -\frac{\Delta[\text{Br}^-]}{\Delta t} = -\frac{5\Delta[\text{BrO}_3^-]}{\Delta t} = -\frac{5}{6} \frac{\Delta[\text{H}^+]}{\Delta t}$$

$$\Rightarrow \frac{\Delta[\text{Br}^-]}{\Delta t} = \frac{5}{6} \frac{\Delta[\text{H}^+]}{\Delta t}$$

26 SELF STUDY GUIDE BITSAT

80. (c) A-III, B-I, C-II, D-IV

English Proficiency

81. (a) Use 'is' in place of 'are' as when two subjects are joined 'along with', then helping verb is used according to first subject.
82. (c) Use 'attested' in place of 'attest' as sentence is in passive voice.
83. (b) Use 'making' in place of 'having' as 'have' is not used in progressive sense.
84. (d) 'Superior' is followed by 'to' preposition.
85. (d) 'Cope' always agree with preposition 'with' and use of any other auxiliary term is improper.
91. (b) The ordinary megalomaniac does not have the talent to realise his wish which Alexander the Great had
92. (d) By wishing to be powerful and feared.
93. (d) Excessive lover of power
94. (c) The nurturing of only one element in human nature
95. (c) Because it is a part of human nature

Logical Reasoning

96. (d) 'Umpire' is required to give decision in 'Match'.

Likewise 'Judge' is required to give decision in a 'Lawsuit'.

97. (c) As, $9 - 2 = 7 \rightarrow 7^2 = 49$

$$13 - 2 = 11 \rightarrow 11^2 = 121$$

$$10 - 2 = 8 \rightarrow 8^2 \neq 61$$

$$7 - 2 = 5 \rightarrow 5^2 = 25$$

Thus, option (c) is odd.

98. (d) The pattern is as follows

99. (d) The data is inadequate because it is not given that who is taller between Virat and Shikhar. Hence, answer cannot be determined.

100. (c) Option (c) will complete the given pattern as follow.

101. (b) Options (b) can be formed from the pieces given in problem figures.

102. (a) After folding and cutting the paper, answer figure (a) will appear.

103. (c) The third figure is each row comprises of parts which are not common in the first two figures.

104. (b) Correct answer figure is (b).

105. (b) The figure in the question may be labelled as shown below

There are nine triangle in the upper half of the figure $ABFE = \triangle AEI, \triangle AIG, \triangle AEG, \triangle GEO, \triangle GBJ, \triangle BFJ, \triangle GBF, \triangle GOF$ and $\triangle GEF$.

Similarly, there are nine triangles in the lower half figure, i.e. $EFCD$.

There are two more triangles $\triangle EGH$ and $\triangle FGH$.

Hence, there are a total of 20 triangles.

Mathematics

$$106. (b) (1+x)^n \left(1 + \frac{1}{x}\right)^n = \left[(2+x) + \frac{1}{x}\right]^n$$

$$= {}^nC_0(2+x)^n \cdot \left(\frac{1}{x}\right) + \dots + {}^nC_n \cdot \frac{1}{x^n}$$

$\therefore$ Coefficient of $x^{-n} = {}^nC_n = 1$

$$107. (c) T_{r+1} = \sqrt{3} \cdot {}^{20}C_r \left(\frac{1}{\sqrt{3}}\right)^r$$

$$\text{and } T_r = \sqrt{3} \cdot {}^{20}C_{r-1} \left(\frac{1}{\sqrt{3}}\right)^{r-1}$$

$$\text{Now, } \frac{T_{r+1}}{T_r} = \frac{20-r+1}{r} \left(\frac{1}{\sqrt{3}}\right)$$

$$\text{Since, } T_{r+1} \geq T_r$$

$$\Rightarrow 20-r+1 \geq \sqrt{3}r$$

$$\Rightarrow r \leq \frac{21}{\sqrt{3}+1} = \frac{21}{2.73}$$

$$\Rightarrow r \leq 7.692 \Rightarrow r = 7$$

$$\therefore \text{ The greatest term is } T_8 = \sqrt{3} \cdot {}^{20}C_7 \left(\frac{1}{\sqrt{3}}\right)^7 = \frac{25840}{9}$$

$$108. (b) \text{ Let } x = 1$$

$$= \cos 0^\circ + i \sin 0^\circ$$

$$= \cos 2r\pi + i \sin 2r\pi = e^{i 2r\pi}$$

$$\Rightarrow x^{1/n} = e^{i(2r\pi)/n}, r = 0, 1, 2, \dots$$

$$\text{Then, the roots are } 1, e^{\frac{2\pi i}{n}}, e^{\frac{4\pi i}{n}}, \dots$$

which are clearly on GP with common ratio $e^{2\pi i/n}$.

$$109. (a) \text{ Given, } P = \begin{bmatrix} a & b & c \\ b & c & a \\ c & a & b \end{bmatrix}$$

$$\therefore P^T = \begin{bmatrix} a & b & c \\ b & c & a \\ c & a & b \end{bmatrix}$$

$$\text{Also given, } P^T P = I$$

$$\therefore |P^T P| = |I| = 1$$

$$\text{or } \begin{vmatrix} a & b & c \\ b & c & a \\ c & a & b \end{vmatrix}^2 = 1 \Rightarrow \begin{vmatrix} a & b & c \\ b & c & a \\ c & a & b \end{vmatrix} = \pm 1$$

$$\text{or } 3abc - a^3 - b^3 - c^3 = \pm 1$$

$$\text{or } 3 \mp 1 = a^3 + b^3 + c^3$$

$$\therefore a^3 + b^3 + c^3 = 2 \text{ or } 4$$

$\therefore$ Option (a) is correct.

$$110. (d) \text{ Given, } x^2 = \begin{vmatrix} \sin \theta & \cos \theta & 0 \\ -\cos \theta & \sin \theta & 1 \\ \sin \theta & \cos \theta & 2 \end{vmatrix}$$

$$\text{On expanding } \begin{vmatrix} \sin \theta & \cos \theta & 0 \\ -\cos \theta & \sin \theta & 1 \\ \sin \theta & \cos \theta & 2 \end{vmatrix} \text{ along } C_3, \text{ we get}$$

$$x^2 = 0 - 1 \begin{vmatrix} \sin \theta & \cos \theta \\ \sin \theta & \cos \theta \end{vmatrix} + 2 \begin{vmatrix} \sin \theta & \cos \theta \\ -\cos \theta & \sin \theta \end{vmatrix}$$

$$= -1(\sin \theta \cos \theta - \sin \theta \cos \theta) + 2(\sin^2 \theta + \cos^2 \theta)$$

$$= -1 \times 0 + 2 \times 1$$

$$\Rightarrow x^2 = 2 \Rightarrow x = \pm \sqrt{2}$$

If $x = \sqrt{2}$, then

$$4x^2 + x \sin \frac{3\pi}{2} + 5 = 4 \times (\sqrt{2})^2 - \sqrt{2} + 5$$

$$= 8 - \sqrt{2} + 5 = (13 - \sqrt{2})$$

$$\text{If } x = -\sqrt{2}, \text{ then } 4x^2 + x \sin \frac{3\pi}{2} + 5$$

$$= 4 \times (-\sqrt{2})^2 + \sqrt{2} + 5$$

$$= 8 + \sqrt{2} + 5 = (13 + \sqrt{2})$$

$$111. (d) \text{ Given, } a, b, c \text{ are in GP.}$$

$$\therefore b^2 = ac$$

$$\text{and } 2(\log 2b - \log 3c) = \log a - \log 2b + \log 3c - \log a$$

$$\Rightarrow b^2 = ac \text{ and } 2b = 3c$$

$$\Rightarrow c = \frac{4a}{9} \text{ and } b = \frac{2a}{3}$$

$$\therefore a + b = \frac{5a}{3} > c, b + c = \frac{10a}{9} > a$$

$$\text{and } c + a = \frac{13a}{9} > b.$$

$\therefore a, b, c$ are the sides of a triangle.

Also, a is the greatest side

$$\therefore \cos A = \frac{b^2 + c^2 - a^2}{2bc} = -\frac{29}{48} < 0$$

$\therefore \triangle ABC$ is an obtuse angled triangle.

Hence, option (d) is correct.

$$112. (c) \text{ Given, } \sum_{r=1}^n t_r = \frac{n(n+1)(n+2)(n+3)}{8} = S_n \text{ (say)}$$

$$\therefore \sum_{r=1}^{n-1} t_r = \frac{(n-1)n(n+1)(n+2)}{8} = S_{n-1}$$

$$\text{Now, } t_n = S_n - S_{n-1} = \frac{n(n+1)(n+2)}{2}$$

$$\therefore \lim_{n \rightarrow \infty} \sum_{r=1}^n \frac{1}{t_r} = \lim_{n \rightarrow \infty} \sum_{r=1}^n \frac{2}{n(n+1)(n+2)}$$

$$\begin{aligned}
&= \lim_{n \rightarrow \infty} \sum_{r=1}^n \left(\frac{1}{n(n+1)} - \frac{1}{(n+1)(n+2)} \right) \\
&= -\lim_{n \rightarrow \infty} \sum_{r=1}^n \left(\frac{1}{(n+1)(n+2)} - \frac{1}{n(n+1)} \right) \\
&= -\lim_{n \rightarrow \infty} \left(\frac{1}{(n+1)(n+2)} - \frac{1}{2} \right) \\
&= -\left(0 - \frac{1}{2} \right) = \frac{1}{2}
\end{aligned}$$

Hence, option (c) is correct.

113. (c) Truth table

p	q	$\sim p$	$\sim q$	$p \vee q$	$\sim q \wedge p$	$p \vee \sim p$	$(p \vee q) \vee (\sim p)$	$(\sim q \wedge p) \vee (p \vee \sim p)$
T	T	F	F	T	F	T	T	T
T	F	F	T	T	T	T	T	T
F	T	T	F	T	F	T	T	T
F	F	T	T	F	F	T	T	T

Hence, option (c) is correct.

114. (c) The two sets of m parallel lines along with two sets of two parallel lines of the given parallelogram will form two sets of $(m+2)$ parallel lines. Each parallelogram is formed by choosing two parallel lines from each of the above

$\therefore$ Total number of parallelograms

$$= {}^{m+2}C_2 \times {}^{m+2}C_2 = ({}^{m+2}C_2)^2$$

Hence, option (c) is correct.

115. (a) Let $f(x) = y$, then

$$\begin{aligned}
a^y &= x + \sqrt{x^2 + 1} \\
\Rightarrow a^{-y} &= \frac{1}{x + \sqrt{x^2 + 1}} \\
\Rightarrow a^{-y} &= \frac{x - \sqrt{x^2 + 1}}{-1} \quad [\text{rationalising}] \\
\therefore a^y - a^{-y} &= 2x \\
\Rightarrow x &= \frac{1}{2}(a^y - a^{-y}) \\
\therefore f^{-1}(y) &= \frac{1}{2}(a^y - a^{-y}) \quad [\because f(x) = y \Rightarrow x = f^{-1}(y)] \\
\Rightarrow f^{-1}(x) &= \frac{1}{2}(a^x - a^{-x}) \quad [\text{replacing } y \text{ by } x]
\end{aligned}$$

Hence, option (a) is correct.

116. (c) Given, $S = \sum_{n=1}^{\infty} \tan^{-1} \frac{2n}{n^4 + n^2 + 2}$... (i)

$$\begin{aligned}
\text{Let } n^4 + n^2 + 1 &= [(n^2)^2 + 1^2 + 2(n^2)(1)] - n^2 \\
&= (n^2 + 1)^2 - n^2 \\
&= (n^2 + n + 1)(n^2 - n + 1) \quad \dots (ii)
\end{aligned}$$

$$\text{Let } u_n = \tan^{-1} \left(\frac{2n}{n^4 + n^2 + 2} \right)$$

$$\begin{aligned}
&= \tan^{-1} \frac{2n}{1 + (n^4 + n^2 + 1)} \\
&= \tan^{-1} \frac{(n^2 + n + 1) - (n^2 - n + 1)}{1 + (n^2 + n + 1)(n^2 - n + 1)} \\
u_n &= \tan^{-1}(n^2 + n + 1) - \tan^{-1}(n^2 - n + 1) \dots (iii)
\end{aligned}$$

On putting $n = 1, 2, 3, \dots$ successively in Eq. (iii), we get

$$u_1 = \tan^{-1} 3 - \tan^{-1} 1$$

$$u_2 = \tan^{-1} 7 - \tan^{-1} 3$$

$$u_3 = \tan^{-1} 13 - \tan^{-1} 7$$

$$\dots \dots \dots$$

$$u_n = \tan^{-1}(n^2 + n + 1) - \tan^{-1}(n^2 - n + 1)$$

On adding vertically, we get

$$\sum_{n=1}^{\infty} u_n = \tan^{-1}(n^2 + n + 1) - \tan^{-1} 1$$

$$S = \lim_{n \rightarrow \infty} \sum_{n=1}^{\infty} u_n \quad [\text{from Eq. (i)}]$$

$$= \lim_{n \rightarrow \infty} \tan^{-1}(n^2 + n + 1) - \tan^{-1} 1$$

$$= \frac{\pi}{2} - \frac{\pi}{4} = \frac{\pi}{4}$$

117. (a) Given, $\sin x + \cos(t+x) + \cos(t-x) = 2$

$$\Rightarrow \sin x + 2 \cos t \cdot \cos x = 2$$

For real solution

$$\sqrt{1 + 4 \cos^2 t} \geq 2$$

$$\Rightarrow \cos^2 t \geq \frac{3}{4}$$

$$\Rightarrow -\frac{1}{2} \leq \sin t \leq \frac{1}{2}$$

Hence, option (a) is correct.

118. (c) We have,

$$\begin{aligned}
&\cos^2 \alpha + \cos^2 \beta + \cos^2 \gamma = 1 \\
\Rightarrow \cos^2 \alpha + \cos^2 \left(\frac{\pi}{2} - \alpha \right) + \cos^2 \gamma &= 1 \quad \left[\text{given, } \alpha + \beta = \frac{\pi}{2} \right] \\
\Rightarrow \cos^2 \alpha + \sin^2 \alpha + \cos^2 \gamma &= 1 \\
\Rightarrow 1 + \cos^2 \gamma &= 1 \\
\Rightarrow \cos^2 \gamma &= 0 \\
\Rightarrow \cos \gamma &= 0 \\
\therefore (\cos \alpha + \cos \beta + \cos \gamma)^2 &= (\cos \alpha + \sin \alpha)^2 \\
&= 1 + 2 \sin \alpha \cdot \cos \alpha = 1 + \sin 2\alpha
\end{aligned}$$

Hence, option (c) is correct.

119. (c) The given straight lines are $3x + 4y = 5$ and $4x - 3y = 15$. Clearly, these straight lines are perpendicular to each other ($m_1 m_2 = -1$) and intersect at A. Now, B and C are points on these lines such that $AB = AC$ and BC passes through (1, 2).

From figure it is clear that $\angle B = \angle C = 45^\circ$

Let slope of BC be m . Then,

$$\tan 45^\circ = \left| \frac{m + \frac{3}{4}}{1 - \frac{3}{4}m} \right|$$

$$\Rightarrow \pm 1 = \frac{4m + 3}{4 - 3m}$$

$$4m + 3 = \pm (4 - 3m)$$

$$4m + 3 = 4 - 3m$$

$$\text{or } 4m + 3 = -4 + 3m$$

$$m = \frac{1}{7}$$

$$\text{or } m = -7$$

Hence, equation of BC is

$$y - 2 = \frac{1}{7}(x - 1)$$

$$\text{or } y - 2 = -7(x - 1)$$

$$\Rightarrow 7y - 14 = x - 1$$

$$\text{or } y - 2 = -7x + 7$$

$$\Rightarrow x - 7y + 13 = 0$$

$$\text{or } 7x + y - 9 = 0$$

Hence, option (c) is correct.

120. (d) Let $y = mx + c$, intersect $y^2 = 4ax$ at $A(at_1^2, 2at_1)$ and $B(at_2^2, 2at_2)$

Then,

$$\frac{2}{t_1 + t_2} = m$$

$$\Rightarrow t_1 + t_2 = \frac{2}{m}$$

Let the foot of another normal be $C(at_3^2, 2at_3)$.

$$\text{Then, } t_1 + t_2 + t_3 = 0$$

$$t_3 = (t_1 + t_2) = -\frac{2}{m}$$

$$\text{Thus, other foot is } \left(\frac{4a}{m^2}, \frac{-4a}{m} \right).$$

Hence, option (d) is correct.

121. (c) Length of perpendicular from origin to the line $x\sqrt{5} + 2y = 3\sqrt{5}$ is

$$OL = \frac{3\sqrt{5}}{\sqrt{(\sqrt{5})^2 + 2^2}} = \frac{3\sqrt{5}}{\sqrt{9}} = \sqrt{5}$$

Radius of the given circle $= \sqrt{10} = OQ = OP$

$$PQ = 2QL$$

$$= 2\sqrt{OQ^2 - OL^2}$$

$$= 2\sqrt{10 - 5} = 2\sqrt{5}$$

$$\text{Thus, area of } \triangle OPQ = \frac{1}{2} \times PQ \times OL$$

$$= \frac{1}{2} \times 2\sqrt{5} \times \sqrt{5} = 5 \text{ sq units}$$

Hence, option (c) is correct.

122. (b) Let r be the radius of the largest circle passing through the focus $(1, 0)$ of $y^2 = 4x$

Clearly, centre of the circle will be on X -axis and its coordinates are $(1 + r, 0)$.

The equation of the circle, is $(x - 1 - r)^2 + y^2 = r^2$.

It touches $y^2 = 4x$. Therefore, the equation $(x - r - 1)^2 + 4x = r^2$ must have equal roots

$$\therefore 4(1 - r)^2 - 4(2r + 1) = 0$$

$$\Rightarrow r = 4$$

Hence, option (b) is correct.

123. (d) The point $P\left(\frac{\pi}{6}\right)$ is $\left(a \sec \frac{\pi}{6}, b \tan \frac{\pi}{6}\right)$ or $P\left(\frac{2a}{\sqrt{3}}, \frac{b}{\sqrt{3}}\right)$

$$\therefore \text{Equation of tangent at } P \text{ is } \frac{x}{\frac{\sqrt{3}a}{2}} - \frac{y}{\frac{b}{\sqrt{3}}} = 1$$

$$\therefore \text{Area of the triangle} = \frac{1}{2} \times \frac{\sqrt{3}a}{2} \times \sqrt{3}b = 3a^2$$

$$\therefore \frac{b}{a} = 4$$

$$\therefore e^2 = 1 + \frac{b^2}{a^2} = 17$$

$$\text{Now, } e^2 - 9 = 17 - 9 = 8$$

Hence, option (d) is correct.

124. (d) Let distances of a point $p(x, y, z)$ from the planes $x + y + z = 0$, $x - z = 0$ and $x - 2y + z = 0$ are $\frac{x + y + z}{\sqrt{3}}$, $\frac{x - z}{\sqrt{2}}$ and $\frac{x - 2y + z}{\sqrt{6}}$ respectively, then

the sum of the squares of distances, is as

$$\begin{aligned} \Rightarrow & \left(\frac{x + y + z}{\sqrt{3}} \right)^2 + \left(\frac{x - z}{\sqrt{2}} \right)^2 + \left(\frac{x - 2y + z}{\sqrt{6}} \right)^2 = p^2 \\ \Rightarrow & 2(x + y + z)^2 + 3(x - z)^2 + (x - 2y + z)^2 = 6p^2 \\ \Rightarrow & 2x^2 + 2y^2 + 2z^2 + 4xy + 4yz + 4zx + 3x^2 \\ & + 3z^2 - 6xz + x^2 + 4y^2 + z^2 - 4xy \\ & - 4yz + 2xz = 6p^2 \\ \Rightarrow & 6x^2 + 6y + 6z^2 = 6p^2 \\ \Rightarrow & x^2 + y^2 + z^2 = p^2 \end{aligned}$$

Hence, option (d) is correct.

125. (a) When line

$$\frac{x - x_1}{a_1} = \frac{y - y_1}{b_1} = \frac{z - z_1}{c_1}$$

is perpendicular to plane $ax + by + cz + d = 0$, then

$$\begin{aligned} \frac{a_1}{a} &= \frac{-b_1}{b} = \frac{c_1}{c} \\ \therefore \frac{\lambda}{2} &= \frac{1}{2} = \frac{-4}{-8} \\ \Rightarrow \lambda &= 1 \end{aligned}$$

Hence, option (a) is correct.

126. (c) Taking the coordinates of vertices O, P, Q, R as $(0, 0)$, $(a, 0)$, (a, a) , $(0, a)$, respectively.

$\therefore$ The coordinates of M is $\left(a, \frac{a}{2}\right)$ and N is $\left(\frac{a}{2}, a\right)$.

$$\therefore \text{Area of } \triangle OMN = \frac{1}{2} \begin{vmatrix} 0 & 0 & 1 \\ a & a/2 & 1 \\ a/2 & a & 1 \end{vmatrix} = \frac{3a^2}{8}$$

and area of the square $= a^2$

$\therefore$ The required ratio is $8 : 3$.

Hence, option (c) is correct.

127. (d) Equation of auxiliary circle is

$$x^2 + y^2 = 9 \quad \dots(i)$$

$$\therefore \text{Equation of } AM \text{ is } \frac{x}{3} + \frac{y}{1} = 1 \quad \dots(ii)$$

On solving Eqs. (i) and (ii), we get

$$M\left(-\frac{12}{5}, \frac{9}{5}\right)$$

$$\text{Now, area of } \triangle AOM = \frac{1}{2} OA \times MN = \frac{27}{10} \text{ sq units}$$

Hence, option (d) is correct.

128. (b) Given equation can be written as

$$x^2 - y^2 = \frac{25}{3}$$

$$\begin{aligned} \therefore e_1 &= \sqrt{1 + \frac{b^2}{a^2}} \\ &= \sqrt{1 + 1} = \sqrt{2} \end{aligned}$$

The equation of conjugate hyperbola is

$$-x^2 + y^2 = \frac{25}{3}$$

$$\therefore e_2 = \sqrt{1 + \frac{b^2}{a^2}} = \sqrt{1 + 1} = \sqrt{2}$$

$$\therefore e_1^2 + e_2^2 = (\sqrt{2})^2 + (\sqrt{2})^2 = 4$$

Hence, option (b) is correct.

129. (a) We have,

$$f(x + y) = f(x) + 2y^2 + kxy \text{ for all } x, y \in R$$

$$\Rightarrow \frac{f(x + y) - f(x)}{y} = 2y + kx \text{ for all } x \in R$$

$$\Rightarrow \lim_{y \rightarrow 0} \frac{f(x + y) - f(x)}{y} = \lim_{y \rightarrow 0} (2y + kx)$$

$$\Rightarrow f'(x) = kx \text{ for all } x \in R$$

$$\Rightarrow f(x) = \frac{kx^2}{2} + C \text{ for all } x \in R \quad [\text{by integration}]$$

$$\text{But, } f(1) = 2 \text{ and } f(2) = 8.$$

$$\therefore 2 = \frac{k}{2} + C \text{ and } 8 = 2k + C$$

$$k = 4 \text{ and } C = 0$$

$$\text{Hence, } f(x) = 2x^2 \text{ for all } x \in R$$

So, option (a) is correct.

- Hence, option (a) is correct.

- Hence, option (d) is correct.

- Hence, option (d) is correct.

-

∴ Option (b) is correct.

- Hence, option (b) is correct.

- $$\therefore \lim_{x \rightarrow 0} x^p \sin \frac{1}{x} = 0$$

32 SELF STUDY GUIDE BITSAT

This possible only when $p > 0$

$$\begin{aligned} f'(0) &= \lim_{h \rightarrow 0} \frac{f(h) - f(0)}{h} \\ &= \lim_{h \rightarrow 0} \frac{h^p \sin \frac{1}{h} - 0}{h} \\ &= \lim_{h \rightarrow 0} h^{p-1} \sin \frac{1}{h} \end{aligned}$$

$\Rightarrow f'(0)$ will exist only when $p > 0$

$\therefore f(x)$ will not be differentiable if

$$p \leq 1$$

...(i)

...(ii)

From Eqs. (i) and (ii), for $f(x)$ to be not differentiable but continuous at $x = 0$, possible values of p are given by $0 < p \leq 1$. Hence option (c) is correct.

136. (a) Integrating the given differential equation, we have

$$\frac{dy}{dx} = \frac{-\cos 3x}{3} + e^x + \frac{x^3}{3} + C_1$$

But $y_1(0) = 1$

$$\text{So, } 1 = \left(-\frac{1}{3}\right) + 1 + C_1$$

$$\Rightarrow C_1 = \frac{1}{3}$$

$$\therefore \frac{dy}{dx} = \frac{-\cos 3x}{3} + e^x + \frac{x^3}{3} + \frac{1}{3}$$

Again integrating, we get

$$y = -\frac{\sin 3x}{9} + e^x + \frac{x^4}{12} + \frac{1}{3}x + C_2$$

But $y(0) = 0$, so $0 = 0 + 1 + C_2$

$$\Rightarrow C_2 = -1$$

$$\text{Thus, } y = -\frac{\sin 3x}{9} + e^x + \frac{x^4}{12} + \frac{1}{3}x - 1$$

Hence, option (a) correct.

137. (d) Given, $f(x) = -2x^3 - 9x^2 - 12x + 1$

$$\Rightarrow f'(x) = -6x^2 - 18x - 12$$

To be decreasing $f'(x) < 0$

$$\Rightarrow -6x^2 - 18x - 12 < 0$$

$$\Rightarrow x^2 + 3x + 2 > 0$$

$$\Rightarrow (x+2)(x+1) > 0$$

Therefore, either $x < -2$ or $x > -1$

$$\Rightarrow x \in (-1, \infty) \text{ or } (-\infty, -2)$$

Hence, option (d) is correct.

138. (c) Let $\mathbf{a} = 4\hat{i} - 4\hat{k}$ and $\mathbf{b} = \hat{i} + \hat{j} + \hat{k}$

Let θ be the angle between $\mathbf{a}$ and $\mathbf{b}$

$$\begin{aligned} \therefore \cos \theta &= \frac{\mathbf{a} \cdot \mathbf{b}}{|\mathbf{a}| |\mathbf{b}|} \\ &= \frac{(4\hat{i} - 4\hat{k}) \cdot (\hat{i} + \hat{j} + \hat{k})}{|\mathbf{a}| |\mathbf{b}|} \end{aligned}$$

$$= \frac{4 + 0 - 4}{|\mathbf{a}| |\mathbf{b}|} = 0$$

$$\cos \theta = \cos 90^\circ \Rightarrow \theta = 90^\circ$$

$$\therefore \sin \theta + \cos \theta = \cos 90^\circ + \sin 90^\circ = 0 + 1 = 1$$

Hence, option (c) is correct.

139. (d)

$$\begin{aligned} \therefore \vec{AD} &= 3\vec{GD} \\ &= 3 \cdot \frac{1}{2}(\vec{GB} + \vec{GC}) \\ &= \frac{3}{2} \left(\frac{2}{3}\vec{EB} + \frac{2}{3}\vec{FC} \right) \\ &= -\vec{BE} - \vec{CF} \end{aligned}$$

Hence, option (d) is correct.

140. (c) Let $x_1, x_2, \dots, x_n$ be n observations.

$$\text{Then, } \bar{x} = \frac{1}{n} \sum x_i$$

$$\text{Let } y_i = \frac{x_i}{\alpha} + 10$$

$$\text{Then, } \frac{1}{n} \sum_{i=1}^n y_i = \frac{1}{\alpha} \left(\frac{1}{n} \sum x_i \right) + \frac{1}{n} (10n)$$

$$\Rightarrow \bar{x}_{\text{new}} = \frac{1}{\alpha} \bar{x} + 10 = \frac{\bar{x} + 10\alpha}{\alpha}$$

Hence option (c) is correct.

141. (c) Volume of the parallelopiped = $||[\mathbf{a} \mathbf{b} \mathbf{c}]||$

$$\Rightarrow (\text{area of the base parallelogram}) \times h = ||[\mathbf{a} \mathbf{b} \mathbf{c}]||$$

$$\Rightarrow ||\mathbf{a} \times \mathbf{b}|| h = ||[\mathbf{a} \mathbf{b} \mathbf{c}]||$$

$$\Rightarrow |-5\hat{i} + 3\hat{j} + 2\hat{k}| h = \left| \begin{vmatrix} 1 & 1 & 1 \\ 2 & 4 & -1 \\ 1 & 1 & 3 \end{vmatrix} \right|$$

$$\Rightarrow \sqrt{38} h = 4 \Rightarrow h = \frac{4}{\sqrt{38}}$$

$$\Rightarrow 38h^2 = 4^2 \Rightarrow 19h^2 = 8$$

Hence, option (c) is correct.

142. (b) Mean (m) for $BD = np$

and variance (σ^2) for $BD = npq$

Given, $np + npq = 2.7$ and $n = 3$

$$\therefore np(1+q) = 2.7 \Rightarrow p(1+q) = \frac{2.7}{3}$$

$$\Rightarrow p(1+q) = 0.9$$

$$\Rightarrow (1-q)(1+q) = 0.9$$

[$\because$ for BD probability standard deviation (SD), $p + q = 1$]

$$\Rightarrow 1 - q^2 = 0.9$$

$$\begin{aligned} \Rightarrow q^2 &= 0.1 \Rightarrow q = \pm 0.3 \\ \therefore q &= 0.3 \\ [\because -0.3 \text{ can't possible as } 0 \leq q \leq 1] \\ \Rightarrow p &= 0.7 \text{ and } q = 0.3 \\ \therefore \text{B.D.} &= (0.3 + 0.7)^5 \end{aligned}$$

Hence, option (b) is correct.

143. (b) We have,

$$R(x) = \int \frac{dx}{e^x + 8e^{-x} + 4e^{-3x}} - 2 \int \frac{dx}{e^{3x} + 8e^x + 4e^{-x}}$$

$$\Rightarrow R(x) = \int \frac{e^x (e^{2x} - 2)}{e^{4x} + 8e^{2x} + 4} dx$$

On substituting

$$e^x = t \Rightarrow e^x dx = dt,$$

we get

$$\begin{aligned} R(t) &= \int \frac{(t^2 - 2) dt}{t^4 + 8t^2 + 4} = \int \frac{(1 - 2t^{-2}) dt}{(t + 2t^{-1})^2 + 4} \\ &= \frac{1}{2} \tan^{-1} \left(\frac{t + 2t^{-1}}{2} \right) + K \end{aligned}$$

$$\Rightarrow R(x) = \frac{1}{2} \tan^{-1} \left(\frac{e^x + 2e^{-x}}{2} \right) + K$$

Hence, $(A, B, C) = (\tan^{-1}, e^x, 2)$

$\therefore$ Option (b) is correct.

$$\begin{aligned} 144. (b) \cot^{-1}(1-x+x^2) &= \tan^{-1} \left(\frac{1}{1-x+x^2} \right) \\ &= \tan^{-1} \left(\frac{1}{1-x(1-x)} \right) \\ &= \tan^{-1} \left(\frac{x+(1-x)}{1-x(1-x)} \right) \\ \Rightarrow \cot^{-1}(1-x+x^2) &= \tan^{-1} x - \tan^{-1}(1-x) \\ \therefore \int_0^1 \cot^{-1}(1-x+x^2) dx &= \int_0^1 \tan^{-1} x dx - \int_0^1 \tan^{-1}(1-x) dx \\ &= \int_0^1 \tan^{-1} x dx + \int_0^1 \tan^{-1} x dx \\ &\quad \left[\because \int_0^a f(x) dx = - \int_0^a f(a-x) dx \right] \\ &= 2 \int_0^1 \tan^{-1} x dx \end{aligned}$$

On evaluating by integration by parts, we have

$$\begin{aligned} &= 2 \left\{ [\tan^{-1} x \cdot x]_0^1 - \int_0^1 \frac{x}{1+x^2} dx \right\} \\ &= 2 \left\{ \frac{\pi}{4} - \left[\frac{1}{2} \ln(1+x^2) \right]_0^1 \right\} \\ &= 2 \left[\frac{\pi}{4} - \frac{1}{2} \log 2 \right] = \frac{\pi}{2} - \log 2 \end{aligned}$$

$$\text{Hence, } \int_0^1 \cot^{-1}(1-x+x^2) dx = \frac{\pi}{2} - \log 2$$

So, option (b) is correct.

145. (a) Given curves are

$$\sqrt{|x|} + \sqrt{|y|} = \sqrt{a} \quad \dots(i)$$

and

$$x^2 + y^2 = a^2 \quad \dots(ii)$$

Now, required areas = 4 [shaded area in the first quadrant]

$$\begin{aligned} &= 4 \left[\frac{\pi a^2}{4} - \int_0^a (\sqrt{a} - \sqrt{x})^2 dx \right] \\ &\quad \text{[from Equ. (i) and (ii)]} \\ &= 4 \left[\frac{\pi a^2}{4} - \int_0^a (a + x - 2\sqrt{a}\sqrt{x}) dx \right] \\ &= 4 \frac{\pi a^2}{4} - 4 \left[ax + \frac{x^2}{2} - \frac{4}{3} \sqrt{a} x^{3/2} \right]_0^a \\ &= \left(\pi - \frac{2}{3} \right) a^2 \text{ sq units} \end{aligned}$$

Hence, option (a) is correct.

$$146. (b) P(A \cap B) = \frac{1}{6} \text{ and } P(A^C \cap B^C) = \frac{1}{3}$$

$$\text{Now, } P(A \cup B)^C = P(A^C \cap B^C) = \frac{1}{3}$$

$$\Rightarrow 1 - P(A \cup B) = \frac{1}{3}$$

$$\Rightarrow P(A \cup B) = \frac{2}{3}$$

$$\text{But } P(A \cup B) = P(A) + P(B) - P(A \cap B)$$

$$\Rightarrow P(A) + P(B) = \frac{5}{6} \quad \dots(i)$$

$\therefore A$ and B are independent events

$$\therefore P(A \cap B) = P(A) P(B)$$

$$\Rightarrow P(A) P(B) = \frac{1}{6}$$

$$\begin{aligned} [P(A) - P(B)]^2 &= [P(A) + P(B)]^2 - 4P(A)P(B) \\ &= \frac{25}{36} - \frac{4}{6} = \frac{1}{36} \end{aligned}$$

$$\Rightarrow P(A) - P(B) = \pm \frac{1}{6} \quad \dots(ii)$$

On solving Eqs. (i) and (ii), we get

$$P(A) = \frac{1}{2} \text{ or } \frac{1}{3}$$

Hence, option (b) is correct.

147. (d) Let A be the event that the examinee gives the correct answer.

Let G, C, K stand for guessing, copying and knowing, respectively.

34 SELF STUDY GUIDE BITSAT

Given, $P(C) = \frac{1}{6}, P(G) = \frac{1}{3}$

and $P\left(\frac{A}{C}\right) = \frac{1}{8}$

$\Rightarrow P(C) + P(G) + P(K) = 1$

$\Rightarrow \frac{1}{6} + \frac{1}{3} + P(K) = 1$

$\therefore P(K) = \frac{1}{2}$

Also, $P\left(\frac{A}{K}\right) = 1$, for if the examinee knows, he/she will correctly answer it and $P\left(\frac{A}{G}\right) = \frac{1}{4}$, since there are four choices.

Now, total probability

$$P(A) = P(G)P\left(\frac{A}{G}\right) + P(C)P\left(\frac{A}{C}\right) + P(K)P\left(\frac{A}{K}\right)$$

$$= \frac{1}{3} \cdot \frac{1}{4} + \frac{1}{6} \cdot \frac{1}{8} + \frac{1}{2} \cdot 1$$

$$= \frac{1}{12} + \frac{1}{48} + \frac{1}{2} = \frac{4 + 1 + 24}{48} = \frac{29}{48}$$

Now,
$$P\left(\frac{K}{A}\right) = \frac{P(K)P\left(\frac{A}{K}\right)}{P(A)}$$

$$= \frac{\frac{1}{2} \cdot 1}{\frac{29}{48}} = \frac{1}{2} \cdot \frac{48}{29} = \frac{24}{29}$$

Hence, option (d) is correct.

148. (d) Since, $p : 4$ is an even prime number,
 $q : 6$ is a divisor of 12 and $r : \text{the HCF of 4 and 6 is 2}$.
 So, $\sim p \vee (q \wedge r)$ is correct.
 Hence, option (d) is correct.

149. (d) From the figure, it is clear that there is no common area.
 So, we cannot find maximum value of z .

Hence, option (d) is correct.

150. (d) Feasible region is ABCA and $Z = 7x - 8y$

at $A(0, 5), Z = 7 \times 0 - 8 \times 5 = -40$

at $B(15, 5), Z = 7(15) - 8(5) = 65$

at $C(0, 20), Z = 7(0) - 8(20) = -160$

Hence, the minimum value of Z is attained at point $(0, 20)$.
 So, option (d) is correct.

Solved Paper 2019

BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as given below.

Part I Physics	1-40
Part II Chemistry	41-80
Part III a. English Proficiency	81-95
b. Logical Reasoning	96-105
Part IV Mathematics	106-150
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

PART I

Physics

- A radioactive sample of half life 23.1 days is disintegrating continuously. The percentage decay of its in 15th to 16th days will be
[Take, $e^{0.03} = 1.03$]
a. 5% b. 1% c. 2.9% d. 3.5%
- Two separate soap bubbles of radii 3×10^{-3} m and 2×10^{-3} m respectively, formed of same liquid (surface tension 6.5×10^{-2} N/m) come together to form a double bubble. The radius of interface of double bubble is
a. 6×10^{-3} m b. 4×10^{-3} m
c. 15×10^{-3} m d. 0.66×10^{-3} m
- An electron revolves in a circular orbit of radius r with angular speed ω . The magnetic field at the centre of electron orbit is
a. $\frac{\mu_0 e \omega}{\pi r}$ b. $\frac{\mu_0 e \omega}{4 \pi r}$
c. $\frac{\mu_0 e^2 \omega}{4 \pi r}$ d. $\frac{\mu_0 e \omega}{2 \pi r}$
- A steel wire of cross-sectional area 4 cm^2 has elastic limit of $2.2 \times 10^8 \text{ N/m}^2$. The maximum upward acceleration that can be given to a 1000 kg elevator supported by this steel wire if the stress is to exceed one-fourth of the elastic limit is [Take, $g = 10 \text{ m/s}^2$]
a. 10 m/s^2 b. 9 m/s^2 c. 15 m/s^2 d. 12 m/s^2
- An ideal monoatomic gas at 300 K expands adiabatically to twice its volume. The final temperature of gas is
a. $300\sqrt{2}$ b. $300\sqrt{3}$ c. $300\left(\frac{1}{2}\right)^{2/3}$ d. $300(2)^{2/3}$
- Two sound producing sources A and B are moving towards and away from a stationary observer with same speed respectively. If frequency of sound produced by both sources are equal as 400 Hz, then speed of sources (approximately) when observer detects 4 beats per second, is
[Given, speed of sound = 340 m/s]
a. 1.7 m/s b. 3.4 m/s c. 2.4 m/s d. 1 m/s
- Pressure versus temperature graph of an ideal gas is shown in the given figure. Density of gas at point A is ρ_0 , then density of gas at point B will be

a. $2\rho_0$ b. $\frac{2}{3}\rho_0$ c. $\frac{3}{2}\rho_0$ d. $3\rho_0$

2 SELF STUDY GUIDE BITSAT

8. A rubber cord has a cross-sectional area 10^{-6} m^2 and total unstretched length 0.1 m. It is stretched to 0.125 m and then released to project a particle of mass 5.0 g. The velocity of projection is [Given, Young's modulus of rubber, $Y = 5 \times 10^8 \text{ N/m}^2$]
- a. 45 m/s b. 30 m/s c. 25 m/s d. 15 m/s

9. A body is moving unidirectionally under the influence of a sources of constant power. The square of its displacement in time t is proportional to
- a. t^3 b. t^2 c. t d. $\sqrt{t}$

10. Two electrons are moving with speed of $5 \times 10^5 \text{ m/s}$ parallel to each other, then the electrostatic and magnetic force between them is
- a. 5×10^5 b. 2.5×10^4
c. 3.6×10^5 d. 4.4×10^3

11. In the following circuit diagram, the current through battery is

- a. 4 A b. 3 A
c. 1 A d. 2 A

12. A semicircular disc of mass M and radius R is free to rotate about its diameter. The moment of inertia of semicircular disc about a line perpendicular to its plane through centre is

- a. $\frac{3}{4} MR^2$ b. $\frac{MR^2}{2}$
c. $\frac{MR^2}{3}$ d. $\frac{MR^2}{4}$

13. 12 eV energy is given to electron in third orbit of H-atom, then final energy of electron when it ionise from third orbit, is

- a. 5.25 eV b. 10.49 eV
c. 12 eV d. 11.15 eV

14. In Young's double slit experiment, the distance between slits and screen is 2 m and distance between slits is 0.25 mm. A light of wavelength 800 nm is used to find fringes on the screen. If screen moves with a speed of 5 m/s, then first maxima will move with a speed of

- a. 16 mm/s b. 8 mm/s
c. 20 m/s d. 50 mm/s

15. The magnetic field at the point O in the following current carrying square loop at the centre will be

- a. $12 \times 10^{-5} \text{ T}$ b. $4 \times 10^{-5} \text{ T}$
c. $4\sqrt{2} \times 10^{-5} \text{ T}$ d. $2\sqrt{2} \times 10^{-5} \text{ T}$

16. The value of current I as shown in the given circuit diagram is

- a. 2 A b. 1.5 A c. 0.9 A d. 0.2 A

17. A semicircular wire of radius r rotates in uniform magnetic field B about its diameter with angular velocity ω . If the total resistance of the circuit is R , then the mean power generated per period of rotation is

- a. $\frac{(\pi Br^2 \omega)^2}{8R}$ b. $\frac{\pi Br \omega^2}{8R}$ c. $\frac{(\pi Br \omega)^2}{8R}$ d. 0

18. A convex lens of focal length 25 cm produces images of the same magnification 2, when an object is kept at two positions x_1 and x_2 ($x_1 > x_2$) from the lens. The ratio of x_2 and x_1 is

- a. 2 : 1 b. 1 : 3 c. 1 : 2 d. 3 : 1

19. A particle X of mass m and initial velocity u collide with another particle Y of mass $\frac{3m}{4}$ which is at rest, The

- collision is head on and perfectly elastic. The ratio of de-Broglie wavelengths λ_Y and λ_X after the collision is
- a. 4 : 3 b. 2 : 32 c. 3 : 4 d. 3 : 32

20. The dimensional formula of $\sqrt{\frac{\mu_0}{\epsilon_0}}$ is

- a. $[\text{ML}^2\text{T}^{-3}\text{A}^2]$ b. $[\text{M}^0\text{L}\text{T}^{-1}\text{A}^0]$
c. $[\text{ML}^2\text{T}^{-3}\text{A}^{-2}]$ d. $[\text{M}^{-1}\text{L}^{-2}\text{T}^3\text{A}^2]$

21. A body of mass m is moving in a straight line with momentum p . Starting at time $t = 0$, a force $F = at$ acts in the same direction on the moving particle during time interval of T . So that its momentum changes from p to $2p$. The value of T is

- a. $\sqrt{\frac{2p}{a}}$ b. $\sqrt{\frac{p}{a}}$ c. $2\sqrt{\frac{2p}{a}}$ d. $\frac{2p}{a}$

22. When a maximum force of 3 N is applied on a body kept on rough inclined plane of shown in the figure, then body remains stationary. The maximum external force up the inclined plane that does not move the block is 12 N. The coefficient of static friction between the block and the plane is [Take, $g = 10 \text{ m/s}^2$]

- a. $\frac{\sqrt{3}}{5}$ b. $\frac{1}{\sqrt{3}}$ c. $\frac{3\sqrt{3}}{5}$ d. $\frac{5}{3\sqrt{3}}$

23. In the shown situation, if middle portion of the lens is painted black, then

- a. complete image of the object will form with low intensity
 b. complete image of the object will form with high intensity
 c. incomplete image of the object will form with low intensity
 d. incomplete image of the object will form with high intensity
24. If sound travels in air with the speed of 340 m/s, then number of tones present in an open organ pipe of length 2 m and its maximum frequency 1200 Hz, are
 a. 17 b. 11 c. 9 d. 14
25. A proton is revolving on a circular path of radius 2 mm with frequency 10 Hz. Magnetic dipole moment associated with proton is
 a. $2 \times 10^{-24} \text{ A-m}^2$ b. $4 \times 10^{-24} \text{ A-m}^2$
 c. $3 \times 10^{-20} \text{ A-m}^2$ d. $6 \times 10^{-20} \text{ A-m}^2$
26. When a capacitor is fully charged as shown in the following figure, then current drawn from the cell is

- a. 1 mA b. 0.5 mA c. 2 mA d. 5 mA
27. A charged capacitor of capacitance C is discharging through a resistor of resistance R . At what time the charge on the capacitor is equal to one half of its initial value?

- a. $\frac{RC}{2}$ b. $\frac{RC}{\log_e 2}$ c. $RC \log_e 2$ d. $\frac{1}{RC} \log_e 2$

28. The escape velocity of the earth surface is v_e . A body is projected with velocity $3v_e$. With what constant velocity will it move in the inter planetary space?
 a. v_e b. $3v_e$ c. $\sqrt{2} v_e$ d. $2\sqrt{2} v_e$

29. The time period of a bob performing simple harmonic motion in water is 2s. If density of bob is $\frac{4}{3} \times 10^3 \text{ kg/m}^3$, then time period of bob performing simple harmonic motion in air will be
 a. 3s b. 4s c. 2s d. 1s

30. A uniform solid cylindrical roller of mass m is being pulled on horizontal surface with force F parallel to the surface applied at its centre. If the acceleration of the cylinder is a and it is rolling without slipping, then the value of F is
 a. $2ma$ b. $3ma$ c. $\frac{3ma}{2}$ d. $\frac{5ma}{2}$

31. A projectile is given an initial velocity of $(\hat{i} + \sqrt{3} \hat{j}) \text{ m/s}$, where $\hat{i}$ is along the ground and $\hat{j}$ is along the vertical. Then, the equation of the path of projectile is [Take, $g = 10 \text{ m/s}^2$]

- a. $y = \sqrt{3}x - 5x^2$ b. $y = \sqrt{3}x + 5x^2$
 c. $x = \sqrt{3}y + 5x^2$ d. $x^2 = y^2 + \sqrt{3}$

32. The force on a body of mass 1 kg is $(20\hat{i} + 10\hat{j}) \text{ N}$. If it starts from rest, then the position of the body at time $t = 2 \text{ s}$, is
 a. $-20\hat{i} - 40\hat{j}$ b. $20\hat{i} - 40\hat{j}$
 c. $40\hat{i} - 20\hat{j}$ d. $40\hat{i} + 20\hat{j}$

33. A cylinder of mass 2 kg is released from rest from the top of an inclined plane of inclination 30° and length 1m. If the cylinder rolls without slipping, then its speed when it reaches the bottom, is [Take, $g = 10 \text{ m/s}^2$]
 a. $\frac{20}{3} \text{ m/s}$ b. $\sqrt{\frac{20}{3}} \text{ m/s}$
 c. $\frac{10}{3} \text{ m/s}$ d. $\sqrt{\frac{10}{3}} \text{ m/s}$

34. Frequency of oscillation of a body is 5 Hz when a force F_1 is applied and 12 Hz when another force F_2 is applied. If both forces F_1 and F_2 are applied together, then frequency of oscillation of the body will be
 a. 13 Hz b. 169 Hz
 c. 62 Hz d. 52 Hz

35. The figure shows the graph of $\frac{pV}{T}$ versus p for

$2 \times 10^{-4} \text{ kg}$ of hydrogen gas at two different temperatures, where p , V and T represents pressure, volume and temperature respectively.

Then, the value of $\frac{pV}{T}$, where the curve meet on the vertical axis, is

4 SELF STUDY GUIDE BITSAT

36. An ammeter of resistance 1.5Ω can measure currents upto 1 A. The value of shunt resistance to measure current upto 4 A is
a. 0.5Ω b. 1Ω c. 1.5Ω d. 0.2Ω
37. In the following figures, which represents the variation of the electric field with distance from the centre of a uniformly charged non-conducting spheres of radius R ?

38. A carbon resistor of $(56 \pm 5.6) \text{ k}\Omega$ is to be marked with rings of different colours for its identification. The colour code sequence will be
a. green, blue, orange, silver
b. blue, yellow, orange, silver
c. green, red, orange, silver
d. red, green, blue, gold
39. Two monochromatic light waves are travelling with same frequency and constant phase different. If both waves interfere, then
a. there is a gain of energy
b. there is a loss of energy
c. the energy is redistributed and the distribution remains constant in time
d. the energy is redistributed and the distribution changes with time
40. In a coil of resistance 50Ω , the induced current developed by changing magnetic flux through it, is shown in figure as a function of time. The magnitude of change in flux through the coil is

- a. 10 Wb b. 20 Wb
c. 32 Wb d. 40 Wb

PART II

Chemistry

41. In a compound, atoms of elements Y form ccp lattice and those of element X occupy $2/3$ rd of tetrahedral voids. The formula of the compound can be
a. X_4Y_3 b. X_2Y_3 c. X_2Y d. X_3Y_4
42. The density of a certain gas at 30°C and 768 torr is 1.35 kg/m^3 , then density of the gas at STP is
a. 1.48 kg/m^3 b. 1.27 kg/m^3
c. 1.35 kg/m^3 d. 1.00 kg/m^3
43. For the octahedral complex, which of the following d -electron configuration will give maximum value of CFSE
a. high spin, d^6 b. low spin, d^4
c. low spin, d^5 d. high spin, d^7
44. The wavelength corresponding to maximum energy for hydrogen is 91.2 nm. The corresponding wavelength for He^+ ion is
a. 2.28 nm b. 22.8 nm c. 182.4 nm d. 364.8 nm
45. The heat of reaction for
 $\text{C}_{18}\text{H}_8(\text{s}) + 12 \text{ O}_2(\text{g}) \longrightarrow 10 \text{ CO}_2(\text{g}) + 4 \text{ H}_2\text{O}(\text{l})$ at constant volume is -1228.2 kcal at 25°C . The heat of reaction at constant pressure and same temperature is
a. -1228.2 kcal b. -1229.3 kcal
c. -1232.9 kcal d. -1242.6 kcal
46. Given the hypothetical reaction mechanism
 $A \xrightarrow{\text{I}} B \xrightarrow{\text{II}} C \xrightarrow{\text{III}} D \xrightarrow{\text{IV}} E$ and the rate as
- | Species formed | Rate of its formation |
|----------------|---------------------------------------|
| B | 0.002 mol/h per mole of A |
| C | 0.030 mol/h per mole of B |
| D | 0.011 mol/h per mole of C |
| E | 0.420 mol/h per mole of D |
- The rate determining step is
a. step I b. step II c. step III d. step IV

the true statement about the product is

- it does not exist as Zwitter ion
- $-\text{NH}_2$ group displays a powerful basic character
- it does not act as inner salt
- $-\text{SO}_3\text{H}$ diminishes the basic character of $-\text{NH}_2$

48. The hybridisation of phosphorous in PO_4^{3-} is

- sp
- sp^2
- sp^3
- sp^3d

49. Which of the following lanthanoid is diamagnetic?

Atomic no's

Sm = 62, Ce = 58, Eu = 63, Yb = 70

- Sm^{2+}
- Eu^{2+}
- Yb^{2+}
- Ce^{2+}

50. Which of the following is/are aromatic alcohol?

- I, II, III, IV
- II and III
- I and IV
- Only I

51. Among the following substituted silanes, the one which will give rise to cross linked silicone polymer on hydrolysis is?

- R_4Si
- R_2SiCl
- R_3SiCl
- R_3SiCl_2

52. For the chemical reaction

the rate law expression should be given as

- $r = k[\text{O}_3]^2[\text{O}_2]^{-1}$
- $r = k[\text{O}_3]^2$
- $r = k[\text{O}_3][\text{O}_2]$
- unpredictable

53. An aqueous solution freezes at 272.4 K, while pure water freezes at 273 K, given $K_f = 1.86 \text{ K kg mol}^{-1}$, and $K_b = 0.512 - k \text{ kg mol}^{-1}$; the molality of solution and boiling point of solution respectively will be—

- 0.322 and 373.16 K
- 0.222 and 273.15 K
- 0.413 and 400 K
- 0.5 and 300.73 K

54. The order of acidic strength of boron trihalides

- $\text{BF}_3 < \text{BCl}_3 < \text{BBr}_3 < \text{BI}_3$
- $\text{BI}_3 < \text{BBr}_3 < \text{BCl}_3 < \text{BF}_3$
- $\text{BCl}_3 < \text{BBr}_3 < \text{BI}_3 < \text{BF}_3$
- $\text{BBr}_3 < \text{BCl}_3 < \text{BF}_3 < \text{BI}_3$

55. The correct order of mobility of alkali metal ions in aqueous solution is—

- $\text{Li}^+ > \text{Na}^+ > \text{K}^+ > \text{Rb}^+$
- $\text{Na}^+ > \text{K}^+ > \text{Rb}^+ > \text{Li}^+$
- $\text{K}^+ > \text{Rb}^+ > \text{Na}^+ > \text{Li}^+$
- $\text{Rb}^+ > \text{K}^+ > \text{Na}^+ > \text{Li}^+$

56. Thermosetting polymer bakelite is formed by the reaction of phenol with

- $\text{CH}_3\cdot\text{CH}_2\cdot\text{CHO}$
- $\text{CH}_3\cdot\text{CHO}$
- $\text{H}\cdot\text{CHO}$
- HCOOH

57. The drug that is antipyretic as well as analgesic is

- chloroquine
- penicillin
- paracetamol
- chlorpromazine hydrochloride

58. The correct statement about the following disaccharide is—

- Ring (I) is pyranose with α -glycosidic link
- Ring (I) is furanose with α -glycosidic link
- Ring (II) is furanose with α -glycosidic link
- Ring (II) is pyranose with α -glycosidic link

59. If one strand of DNA has sequence ATCGTATG, the sequence in the complementary strand would be

- TAGCTTAC
- TCACATAC
- TAGCATAC
- TACGATAC

60. Which of the following salt would give SO_2 with hot and dil H_2SO_4 and also decolourises Br_2 water?

- Na_2SO_3
- NaHSO_4
- Na_2SO_4
- Na_2S

61. In the reaction (X) and (Y) are respectively.

62. Which of the following reactions is an example of use of water gas in the synthesis of other compounds?

- $\text{CH}_4(g) + \text{H}_2\text{O}(g) \xrightarrow[1270 \text{ K}]{\text{Ni}} \text{CO}(g) + \text{H}_2(g)$
- $\text{CO}(g) + \text{H}_2\text{O}(g) \xrightarrow[673 \text{ K}]{\text{Catalyst}} \text{CO}_2(g) + \text{H}_2(g)$
- $\text{C}_n\text{H}_{2n+2} + n \cdot \text{H}_2\text{O}(g) \xrightarrow[1270 \text{ K}]{\text{Ni}} n \cdot \text{CO} + (2n + 1) \text{H}_2$
- $\text{CO}(g) + 2\text{H}_2(g) \xrightarrow[\text{Catalyst}]{\text{Cobalt}} \text{CH}_3\cdot\text{OH}(l)$

6 SELF STUDY GUIDE BITSAT

63. Which of the following compounds, on reaction with NaOH and Na_2O_2 gives yellow colour?
a. $\text{Zn}(\text{OH})_2$ b. $\text{Al}(\text{OH})_3$ c. $\text{Cr}(\text{OH})_3$ d. CaCO_3

64. For the reaction—

rate of reaction is faster, when Z is—

- a. Cl b. NH_2 c. OC_2H_5 d. OCOCH_3
65. E_1 , E_2 and E_3 are the emf of the following three galvanic cells respectively
(i) $\text{Zn}(\text{s}) | \text{Zn}^{2+} (0.1\text{M}) || \text{Cu}^{2+} (1\text{M}) | \text{Cu}(\text{s})$
(ii) $\text{Zn}(\text{s}) | \text{Zn}^{2+} (1\text{M}) || \text{Cu}^{2+} (1\text{M}) | \text{Cu}(\text{s})$
(iii) $\text{Zn}(\text{s}) | \text{Zn}^{2+} (1\text{M}) || \text{Cu}^{2+} (0.1\text{M}) | \text{Cu}(\text{s})$

Which of the following is true?

- a. $E_2 > E_1 > E_3$ b. $E_1 > E_2 > E_3$
c. $E_3 > E_1 > E_2$ d. $E_3 > E_2 > E_1$
66. Sodium nitroprusside, when added to an alkaline solution of sulphide ions, produce a
a. red colouration b. blue colouration
c. purple colouration d. brown colouration
67. For a reverse reaction, $A \rightleftharpoons B$, which one of the following statement is wrong from the given energy. Profile diagram?
a. Activation energy of forward reaction is greater than backward reaction
b. The forward reaction is endothermic
c. The threshold energy is less than that of activation energy
d. The energy of activation of forward reaction is equal to the sum of heat of reaction and the energy of activation of backward reaction
68. Which of the following reactants is used for the preparation of ethyl benzene, where anhyd. AlCl_3 is a catalyst?
a. $\text{CH}_3 \cdot \text{CH}_2 \cdot \text{OH} + \text{C}_6\text{H}_6$ b. $\text{CH}_3-\text{CH}=\text{CH}_2 + \text{C}_6\text{H}_6$
c. $\text{H}_2\text{C}=\text{CH}_2 + \text{C}_6\text{H}_6$ d. $\text{CH}_3-\text{CH}_3 + \text{C}_6\text{H}_6$
69. Given pH of a solution 'A' is '3' and it is mixed with another solution 'B' having pH '2'. If both solutions are mixed, the resultant pH of the solution will be
a. 3.2 b. 1.9 c. 3.4 d. 3.5
70. In Freundlich adsorption isotherm, the value of $1/n$ is
a. between 0 and 1 in all cases
b. between 2 and 4 in all cases
c. always 1 in case of physical adsorption
d. always 1 in use of chemical adsorption

71. Spin only magnetic moment of Mn^{4+} ion is nearly
a. 3 BM b. 6 BM
c. 4 BM d. 5 BM

72. 0.45 g acid of molecular mass 90 was neutralise by 20 ml of 0.5 N KOH. The basicity of the acid is
a. 2 b. 4 c. 1 d. 3

73. 4 moles of A are mixed with 4 moles of B. At equilibrium for the reaction $A + B \rightleftharpoons C + D$, 2 moles of C and D are formed, the equilibrium constant for the reaction will be,
a. 1 b. 1/2
c. 4 d. 1/4

74. What time in sec is required for depositing all the silver present in 125 ml of 1 M AgNO_3 solution by passing a current of 241.25 A (Given $\text{IF} = 96500 \text{ C}$)
a. 10 b. 50
c. 100 d. 1000

75. In a homonuclear molecule, which of the following set of orbitals is degenerated?
a. $\sigma^* 1s$ and $\sigma 2s$ b. $\pi 2p_x$ and $\pi 2p_y$
c. $\pi^* 2p_x$ and $\sigma^* 2p_z$ d. $\sigma 2p_x$ and $\sigma^* 2p_z$

76. If the photon of wavelength 150 pm strikes an atom and one of its inner bond electron is ejected out with a velocity of $1.5 \times 10^7 \text{ m/s}$, what is the energy with which it is bond to the nucleus?
a. $1.2 \times 10^2 \text{ eV}$ b. $2.15 \times 10^3 \text{ eV}$
c. $7.6 \times 10^3 \text{ eV}$ d. $8.12 \times 10^3 \text{ eV}$

77. Identify compound (C) in the following reaction

- a. o-bromotoluene b. m-bromotoluene
c. p-bromotoluene d. 3-bromo, 2, 4, 6 trichlorotoluene
78. In a compound C, H and N are present in 9 : 1 : 3.5 by weight. If molecular weight of compound is 108, the molecular formula of compound is
a. $\text{C}_2\text{H}_6\text{N}_2$ b. $\text{C}_3\text{H}_4\text{N}$
c. $\text{C}_6\text{H}_8\text{N}_2$ d. $\text{C}_9\text{H}_{12}\text{N}_3$
79. Which of the following compounds contain all the carbon atoms in the same hybridisation state
a. $\text{H}-\text{C}\equiv\text{C}-\text{C}\equiv\text{C}-\text{H}$ b. $\text{CH}_3-\text{C}\equiv\text{C}-\text{CH}_3$
c. $\text{CH}_2=\text{C}=\text{CH}_2$ d. $\text{CH}_2=\text{CH}-\text{C}\equiv\text{CH}$
80. The final step for extraction of copper from copper pyrite in bessemer converter involves the reaction
a. $\text{Cu}_2\text{S} + 2\text{Cu}_2\text{O} \longrightarrow 6\text{Cu} + \text{SO}_2$
b. $4\text{Cu}_2\text{O} + \text{FeS} \longrightarrow 8\text{Cu} + \text{FeSO}_4$
c. $2\text{Cu}_2\text{O} + \text{FeS} \longrightarrow 4\text{Cu} + \text{Fe} + \text{SO}_2$
d. $\text{Cu}_2\text{S} + 2\text{FeO} \longrightarrow 2\text{Cu} + \text{Fe} + \text{SO}_2$

Part III

a. English Proficiency

Directions (Q. Nos 81-83) *In the following questions, the sentences may or may not be grammatically correct. Find out which part of a sentence has an error and mark that part. If is no error mark part 'd' as your answer.*

81. Many a man **a.** / have come to India from Bangladesh **b.** / to live here permanently. **c.** / No error **d.**
82. How long it takes **a.** / to travel from Chennai to Trichy **b.** / by train? **c.** / No error **d.**
83. One should respect **a.** / the religions of others **b.** / as much as his own. **c.** / No error **d.**

Directions (Q. Nos. 84 and 85) *Fill in the blanks with suitable preposition from the alternatives given under each sentence.*

84. The master assured her success in the examination.
a. of **b.** in **c.** for **d.** with
85. Why do we always have to submit his authority?
a. under **b.** with **c.** for **d.** to

Directions (Q. Nos. 86-88) *Select the word or the phrase that is closest to the opposite in meaning of the italicised or phrase.*

86. The officer made an *audacious* remark.
a. Mute **b.** Visible **c.** Cultivated **d.** Timid
87. They put forward *cogent* arguments for their membership.
a. Logical **b.** Weighty **c.** Dissuasive **d.** Persuasive
88. His administration was *tainted* by scandal
a. Construct **b.** Clear **c.** Purify **d.** Repair

Directions (Q. Nos. 89 and 90) *Choose the word nearest meaning to the underlined word.*

89. Her mother is vivacious and elegant.
a. Imaginary **b.** Lively **c.** Perceptible **d.** Languid
90. Sporadic fighting broke out in the office.
a. Timely **b.** Scattered **c.** Frequent **d.** Irrelevant

Directions (Q. 91-95) *Read the passage given below and answer the questions that follow.*

Radically changing monsoon patterns, reduction in the winter rice harvest and a quantum increase in respiratory diseases-all part of the environmental doomsday scenario which is reportedly playing out in South Asia. According to a United Nations Environment Programme report, a deadly 3-km deep blanket of pollution comprising a fearsome cocktail of ash, acids, aerosols and other particles has enveloped this region.

For India, already struggling to cope with a drought, the implications of this are devastating and further crop failure will amount to a life and death question for many Indians. The increase in premature deaths will have adverse social and economic consequences and a rise in **morbidities** will place an unbearable burden on our crumbling health system. And there is no one to blame but ourselves.

Both official and corporate India has always been **allergic** to any mention of clean technology. Most mechanical two wheelers roll off the assembly line without proper pollution control system.

Little effort is made for R & D on simple technologies, which could make a difference to people's lives and the environment. However, while there is no denying that South Asia must clean up its act, skeptics might question the timing of the haze report.

91. Both official and corporate India is allergic to
a. failure of monsoon
b. poverty and inequality
c. slowdown in industrial production
d. mention of clean technology
92. Which, according to the passage, is a life and death question to many Indians?
a. Increase in respiratory diseases
b. Use of clean technology
c. Thick blanket of pollution over the region
d. Failure in crops
93. Choose the word which is similar in meaning to the word 'profligacy' as used in the passage.
a. wastefulness **b.** conservation
c. upliftment **d.** criticalness
94. According to the passage, India cannot tolerate any further
a. crop failure
b. deterioration of healthcare system
c. increase in respiratory diseases
d. proliferation of nuclear devices
95. What could be the reason behind timing of the haze report just before the Johannesburg meet, as indicated in the passage?
a. United Nations is working hand-in-glove with US
b. Organises the forthcoming meet to teach a lesson to the US
c. Drawing attentions of the world towards devastating effects of environment degradation
d. US wants to use it as a handle against the developing countries in the forthcoming meet

b. Logical Reasoning

96. College' is related to 'Student' in the same way as 'Hospital' is related to
a. Doctor b. Nurse c. Medicine d. Patient
97. Choose the odd one.
a. 27 b. 35
c. 18 d. 9
98. Complete the series by replacing questions mark "?"
1, 2, 2, 4, 3, 8, 7, 10, ?
a. 9 b. 8
c. 11 d. 13
99. Mohan is taller than Shyam but shorter than Ramesh. Ramesh is taller than Rajat but shorter than Gautam. If Shyam is taller than Rajat, then who is the shortest among all?
a. Gautam b. Rajat
c. Shyam d. Ramesh
100. In the following question, complete the missing segment by selecting the appropriate figure from the given alternatives, a., b., c. and d..
- Problem Figure** **Answer Figures**
-
101. In the question given below, find out which of the figures can be formed from the pieces given in the problem figure.
- Problem Figure** **Answer Figures**
-
102. In the following question, a set of three figures (X), (Y) and (Z) have been given, showing a sequence in which paper is folded and finally cut from a particular section. These figures are followed by a set of answer figures marked a., b., c. and d. showing the design which the paper actually acquires when it is unfolded. You need to select the answer figure which is closest to the unfolded piece of paper.

Problem Figures

Answer Figures

103. Which of the answer figure (a), (b), (c) or (d) completes the figures matrix?

Problem Figure

Answer Figures

104. In the following question, some dots are placed in the figure marked as (A). The figure is followed by four alternatives marked as (a), (b), (c) and (d). One out of these four options contains region(s) common to the circle, square, triangle, similar to that marked by the dot in figure (A). Choose the correct option.

Question Figure

Answer Figures

105. How many triangles are there in the given figure?

- a. 28 b. 24
c. 25 d. 26

Part IV

Mathematics

106. If the length of the major axis of the ellipse $\frac{x^2}{a^2} + \frac{y^2}{b^2} = 1$ is three times the length of minor axis, its eccentricity is
 a. $\frac{1}{3}$ b. $\frac{1}{\sqrt{3}}$ c. $\sqrt{\frac{2}{3}}$ d. $\frac{2\sqrt{2}}{3}$
107. $\sum_{m=1}^n \tan^{-1}\left(\frac{2m}{m^4 + m^2 + 2}\right)$ is equal to
 a. $\tan^{-1}\left(\frac{n^2 + n}{n^2 + n + 2}\right)$ b. $\tan^{-1}\left(\frac{n^2 - n}{n^2 - n + 2}\right)$
 c. $\tan^{-1}\left(\frac{n^2 + n + 2}{n^2 + n}\right)$ d. None of these
108. Let $(2x^2 + 3x + 4)^{10} = \sum_{r=0}^{20} a_r x^r$, then the value of $\frac{a_8}{a_{12}}$, is
 a. 2 b. 4 c. 8 d. 16
109. Let ABC be an acute-angled triangle and let D be the mid-point of BC . If $AB = AD$, then $\frac{\tan B}{\tan C}$ equal
 a. $\sqrt{2}$ b. $\sqrt{3}$
 c. 2 d. 3
110. Suppose the limit $L = \lim_{n \rightarrow \infty} \sqrt{n} \int_0^1 \frac{1}{(1+x^2)^n} dx$ exists and is larger than $\frac{1}{2}$, then
 a. $\frac{1}{2} < L < 2$ b. $2 < L < 3$ c. $3 < L < 4$ d. $L \geq 4$
111. In the real number system, the equation $\sqrt{x+3} - 4\sqrt{x-1} + \sqrt{x+8} - 6\sqrt{x-1} = 1$ has
 a. No solution
 b. Exactly two distinct solution
 c. Exactly four distinct solution
 d. Infinitely many solution
112. If system of equation $ax + y + z = a$, $x + by + z = b$ and $x + y + cz = c$ is inconsistent, then which of the following is correct?
 a. $abc - a - b - c + 2 = 0$
 b. $abc - a - b - c + 3 = 0, a = 1$
 c. $abc - a - b - c + 3 = 0$
 d. $abc - a - b - c + 2 = 0, a \neq 1, b \neq 1, c \neq 1$
113. A die is thrown 7 times. What is the probability that an even number turns up at least 4 times?
 a. $\frac{1}{2}$ b. $\frac{31}{64}$ c. $\frac{51}{128}$ d. $\frac{35}{128}$
114. The equation of plane containing line $x - y = 1, z = 1$ and parallel to $\frac{x}{2} - \frac{z}{3} = 1, y = 3$ is
 a. $3x + 3y - 2z = 1$ b. $3x - 3y - 2z = 1$
 c. $3x + 3y + 2z = 1$ d. $3x + 3y + 2z = -1$
115. If $(1+x+x^2)^{20} = \sum_{r=0}^{40} a_r \cdot x^r$, then $\sum_{r=0}^{39} (-1)^r \cdot a_r \cdot a_{r+1}$ equal to
 a. 79 b. $2^{39} \cdot {}^{78}C_{39}$ c. $3^{39} \cdot {}^{78}C_{39}$ d. 0
116. The value of $\lim_{x \rightarrow \frac{3\pi}{4}} \frac{4 \sin^2 x \cos x - \cos x + \sin x}{\sin x + \cos x}$ is
 equal to
 a. -1 b. 0 c. 1 d. None of these
117. If $\mathbf{a}, \mathbf{b}, \mathbf{c}$ are non-coplanar vectors such that $\mathbf{b} \times \mathbf{c} = \mathbf{a}$; $\mathbf{c} \times \mathbf{a} = \mathbf{b}$; $\mathbf{a} \times \mathbf{b} = \mathbf{c}$, then which of the following is not TRUE?
 a. $|\mathbf{a}| - |\mathbf{b}| = 0$ b. $|\mathbf{a}| = |\mathbf{b}| = |\mathbf{c}| = 2$
 c. $[\mathbf{a} \ \mathbf{b} \ \mathbf{c}] = 1$ d. $|\mathbf{a}| |\mathbf{b}| |\mathbf{c}| = 1$
118. The value of ' λ ' for which the loci $\arg z = \frac{\pi}{6}$ and $|z - 2\sqrt{3}i| = \lambda$ on the argand plane touch each other is
 a. 3 b. 4 c. 5 d. 6
119. The angle between the lines whose direction cosine satisfy the equations $l + m + n = 0$ and $l^2 = m^2 + n^2$ is
 a. $\frac{\pi}{3}$ b. $\frac{\pi}{4}$
 c. $\frac{\pi}{6}$ d. $\frac{\pi}{2}$
120. The locus of the foot of perpendicular drawn from the centre of the ellipse $x^2 + 3y^2 = 6$ on any tangent to it is
 a. $(x^2 - y^2)^2 = 6x^2 + 2y^2$ b. $(x^2 - y^2)^2 = 6x^2 - 2y^2$
 c. $(x^2 + y^2)^2 = 6x^2 + 2y^2$ d. $(x^2 + y^2)^2 = 6x^2 - 2y^2$
121. If f and g are differentiable function in $[0, 1]$ satisfying $f(0) = 2 = g(1)$, $g(0) = 0$ and $f(1) = 6$, then for some $c \in (0, 1)$
 a. $2f'(c) = g(c)$ b. $2f'(c) = 3g'(c)$
 c. $f'(c) = g'(c)$ d. $f'(c) = 2g'(c)$
122. The integral $\int \left(1 + x - \frac{1}{x}\right) e^{x + \frac{1}{x}} dx$ is equal to
 a. $(x-1)e^{x + \frac{1}{x}} + C$ b. $x e^{x + \frac{1}{x}} + C$
 c. $(x+1)e^{x + \frac{1}{x}} + C$ d. $-x e^{x + \frac{1}{x}} + C$

- 123.** If the coefficient of x^3 and x^4 in the expansion of $(1+ax+bx^2)(1-2x)^{18}$ in powers of x are both zero, then (a, b) is equal to
 a. $\left(16, \frac{251}{3}\right)$ b. $\left(14, \frac{251}{3}\right)$ c. $\left(14, \frac{272}{3}\right)$ d. $\left(16, \frac{272}{3}\right)$
- 124.** An equation of plane parallel to plane $x-2y+2z-5=0$ and at a unit distance from the origin is
 a. $x-2y+2z=3$ b. $x-2y+2z+1=0$
 c. $x-2y+2z-1=0$ d. $x-2y+2z+5=0$
- 125.** Three numbers are chosen at random without replacement from $\{1, 2, 3, \dots, 8\}$. The probability that their minimum is 3, given that their maximum is 6, is
 a. $\frac{3}{8}$ b. $\frac{1}{5}$ c. $\frac{1}{4}$ d. $\frac{2}{5}$
- 126.** The number of real numbers λ for which the equality $\frac{\sin(\lambda\alpha)}{\sin\alpha} - \frac{\cos(\lambda\alpha)}{\cos\alpha} = \lambda - 1$, holds for all real α which are not integral multiple of $\pi/2$ is
 a. 1 b. 2
 c. 3 d. Infinite
- 127.** Suppose a parabola $y = ax^2 + bx + c$ has two x intercepts, one positive and one negative, and its vertex is $(2, -2)$, then which of the following is true?
 a. $ab > 0$ b. $bc > 0$
 c. $ac > 0$ d. $a + b + c > 0$
- 128.** The larger of two angles made with the X -axis of a straight line drawn through $(1, 2)$ so that it intersects the line $x + y = 4$ at a point distant $\sqrt{6}/3$ from the point $(1, 2)$ is
 a. 60° b. 75°
 c. 105° d. None of these
- 129.** The point $([P+1], [P])$ (where, $[x]$ is the greatest integer function) lying inside the region bounded by the circle $x^2 + y^2 - 2x - 15 = 0$ and $x^2 + y^2 - 2x - 7 = 0$, then
 a. $P \in [-1, 2) - \{0, 1\}$ b. $P \in [-1, 0) \cup (0, 1) \cup (1, 2]$
 c. $P \in (-1, 2)$ d. None of these
- 130.** Solution of the equation $\frac{dy}{dx} = e^{x-y}(e^x - e^y)$ is
 a. $e^y = e^x - 1 + ce^{-e^x}$ b. $e^{y-x} = -1 + ce^{-e^x}$
 c. $e^x + e^y = ce^{-e^x}$ d. None of these
- 131.** Area bounded by two branches of the curve $(y-x)^2 = x^3$ and $x = 1$ is
 a. $\frac{5}{4}$ sq unit b. $\frac{3}{2}$ sq unit
 c. $\frac{1}{4}$ sq unit d. $\frac{4}{5}$ sq unit
- 132.** The least value of the function $f(x) = \int_0^x (3 \sin x + 4 \cos x) dx$ on the interval $\left[\frac{5\pi}{4}, \frac{4\pi}{3}\right]$ is
 a. $\frac{3}{2} - \frac{\sqrt{3}}{2}$ b. $\frac{5-4\sqrt{3}}{2}$ c. $\frac{7-4\sqrt{3}}{2}$ d. $\frac{9-4\sqrt{3}}{2}$
- 133.** If z_1 and $\bar{z}_1$ represents adjacent vertices of a regular polygon of n sides and if $\frac{I_m(z_1)}{R_e(z_1)} = \sqrt{2} - 1$, then n is equal to
 a. 8 b. 16 c. 18 d. 24
- 134.** In the expansion of $(1+x+x^3+x^4)^{10}$, the coefficient of x^4 is
 a. 235 b. 310 c. 285 d. 325
- 135.** A person writes letter to six friends and addresses the corresponding envelopes. Let x be the numbers of ways so that at least two of the letters are in wrong envelopes and y be the numbers of ways so that all the letters are in wrong envelopes. Then $x - y =$
 a. 719 b. 265 c. 454 d. 720
- 136.** If $x = \log_5 3 + \log_7 5 + \log_9 7$, then
 a. $x > \frac{3}{2}$ b. $x > \frac{1}{\sqrt[3]{2}}$ c. $x > \frac{3}{\sqrt[3]{2}}$ d. $x > \sqrt[3]{2}$
- 137.** Let p and q be roots of the equation $x^2 - 2x + A = 0$ and let r and s be the roots of the equation $x^2 - 18x + B = 0$, If $p < q < r < s$ are in AP, then A and B are
 a. $-3, -77$ b. $3, -77$ c. $-3, 77$ d. $3, 77$
- 138.** Let $a, b, c \in R^+$ and the system of equations $(1-a)x + y + z = 0$, $x + (1-b)y + z = 0$ and $x + y + (1-c)z = 0$ has infinitely many solutions, the minimum value of ' abc ' is
 a. $3\sqrt{3}$ b. 9 c. 27 d. 3
- 139.** If A is an 3×3 non-singular matrix, such that $AA' = A' A$ and $B = A^{-1}A'$, then BB' equals to
 a. $(B^{-1})'$ b. $I + B$ c. I d. B^{-1}
- 140.** If $\sin^{-1} x + \tan^{-1} x = \pi/2$, then $2x^2 + 1 =$
 a. $\sqrt{5}$ b. $\frac{\sqrt{5}-1}{2}$ c. 2 d. $\frac{\sqrt{5}+1}{2}$
- 141.** Number of solution of the equation $|\cos x| = 2[x]$ are (where $|x|, [x]$ are modulus and greatest integer function respectively).
 a. 0 b. 2 c. 1 d. infinitely many
- 142.** Let $\cos(\alpha + \beta) = \frac{4}{5}$ and let $\sin(\alpha - \beta) = \frac{5}{13}$, where $0 \leq \alpha, \beta \leq \frac{\pi}{4}$, then $\tan 2\alpha =$
 a. $\frac{20}{7}$ b. $\frac{25}{16}$ c. $\frac{56}{33}$ d. $\frac{19}{2}$

- 143.** Cards are drawn one by one at random from a well shuffled pack of 52 cards until 2 aces are obtained for the first time. The probability that 18 draws are required for this is
 a. $\frac{3}{34}$ b. $\frac{17}{455}$
 c. $\frac{561}{15925}$ d. None of these
- 144.** If $\mathbf{a} = \hat{i} + 2\hat{j} + 3\hat{k}$, $\mathbf{b} = -\hat{i} + 2\hat{j} + \hat{k}$, $\mathbf{c} = 3\hat{i} + \hat{j}$ and $\mathbf{a} + p\mathbf{b}$ is normal to $\mathbf{c}$, then p is equal to
 a. 0 b. 1
 c. 5 d. 3
- 145.** Let $f(x) = x[x]$, $x \in \mathbb{Z}$, ($[\cdot]$ denotes greatest integer function), then $f'(x)$ is equal to
 a. $2x$ b. $[x]$
 c. $2[x]$ d. 1
- 146.** The difference of maximum and minimum values of $f(x) = x^2 e^{-x}$ is
 a. e b. $1/e$
 c. $1 - \frac{1}{e}$ d. $1 + \frac{1}{e}$
- 147.** If $f'(x) = f(x) + \int_0^1 f(x) dx$, $f(0) = 1$, then $f(x) =$
 a. $\frac{2e^x}{3-e} + \frac{1-e}{3-e}$ b. $\frac{e^x}{3-e} + \frac{1+e}{1-e}$
 c. $\frac{3e^x}{2-e} + \frac{1+e}{1-e}$ d. $\frac{3e^x}{2-e} + \frac{1-e}{3+e}$
- 148.** The distance between the origin and the normal to curve $y = e^{2x} + x^2$ at $x = 0$ is
 a. $\frac{2}{\sqrt{3}}$ b. $\frac{2}{\sqrt{5}}$ c. $\frac{1}{\sqrt{3}}$ d. $\frac{1}{\sqrt{5}}$
- 149.** Reflection of the line $\frac{x-1}{-1} = \frac{y-2}{3} = \frac{z-4}{1}$ in the plane $x + y + z = 7$ is
 a. $\frac{x-1}{3} = \frac{y-2}{1} = \frac{z-4}{1}$ b. $\frac{x-1}{-3} = \frac{y-2}{-1} = \frac{z-4}{1}$
 c. $\frac{x-1}{-3} = \frac{y-2}{1} = \frac{z-4}{-1}$ d. $\frac{x-1}{3} = \frac{y-2}{1} = \frac{z-4}{1}$
- 150.** If $x, y, z \in \mathbb{R}$, $x + y + z = 5$, $x^2 + y^2 + z^2 = 9$, then length of interval in which x lies is
 a. $8/3$ b. $4/3$ c. $2/3$ d. $1/3$

Solutions

Physics

1. (c) Given, half life ($T_{1/2}$) = 23.1 days

If N_0 be the initial amount, then active nuclei at $t = 15$ days

$$N_1 = N_0 e^{-15\lambda} \quad \dots (i)$$

Active nuclei at $t = 16$ days

$$N_2 = N_0 e^{-16\lambda} \quad \dots (ii)$$

Disintegration constant,

$$\lambda = \frac{0.693}{T_{1/2}} = \frac{0.693}{23.1} = 0.03$$

$\therefore$ % decay in 15th to 16th days

$$\begin{aligned} &= \frac{N_1 - N_2}{N_1} \times 100 = \frac{N_0 e^{-15\lambda} - N_0 e^{-16\lambda}}{N_0 e^{-15\lambda}} \times 100 \\ &= (1 - e^{-\lambda}) \times 100 = (1 - e^{-0.03}) \times 100 \\ &= \left(1 - \frac{1}{e^{0.03}}\right) \times 100 = \left(1 - \frac{1}{1.03}\right) \times 100 = 2.9\% \end{aligned}$$

2. (a) Excess pressure inside first bubble of radius r_1 ,

$$p_1 = p_0 + \frac{4T}{r_1}$$

Excess pressure inside second bubble of radius r_2 ,

$$p_2 = p_0 + \frac{4T}{r_2}$$

Excess pressure inside double bubble,

$$\begin{aligned} p &= p_2 - p_1 \\ p &= 4T \left(\frac{r_1 - r_2}{r_1 r_2} \right) \end{aligned}$$

If R be the radius of double bubble, then

$$p = \frac{4T}{R}$$

$$\text{or } 4T \left(\frac{r_1 - r_2}{r_1 r_2} \right) = \frac{4T}{R}$$

$$\Rightarrow R = \frac{r_1 r_2}{r_1 - r_2} = \frac{3 \times 10^{-3} \times 2 \times 10^{-3}}{(3 - 2) \times 10^{-3}} = 6 \times 10^{-3} \text{ m}$$

$$R = 6 \times 10^{-3} \text{ m}$$

3. (b) Magnetic field at the centre of circular loop,

$$B = \frac{\mu_0 I}{2r} \quad \dots (i)$$

Period of revolution of electron, where ω = angular velocity of electron

$$T = \frac{2\pi}{\omega}$$

where, ω = angular velocity of electron

Current produced due to movement of electron,

$$I = \frac{e}{T} = \frac{e}{\frac{2\pi}{\omega}} = \frac{e\omega}{2\pi}$$

On substituting the value of I in Eq. (i), we get

$$B = \frac{\mu_0}{2r} \cdot \frac{e\omega}{2\pi}$$

$$\Rightarrow B = \frac{\mu_0 e \omega}{4\pi r}$$

4. (d) Given, $Y = 2.2 \times 10^8 \text{ m/s}^2$

Area of cross-section of steel wire,

$$A = 4 \text{ cm}^2 = 4 \times 10^{-4} \text{ m}^2$$

Mass of elevator, $m = 1000 \text{ kg}$

The maximum tension in the steel wire that can support elevator is given by

$$\begin{aligned} T &= \frac{1}{4} \times \text{stress} \times \text{area of cross-section} \\ &= \frac{1}{4} \times 2.2 \times 10^8 \times 4 \times 10^{-4} \\ &= 2.2 \times 10^4 \text{ N/m}^2 \end{aligned}$$

If f be the maximum upward acceleration of the elevator, then

$$\begin{aligned} \Rightarrow T &= m(g + f) \\ 2.2 \times 10^4 &= 1000(10 + f) \\ \Rightarrow f &= 12 \text{ m/s}^2 \end{aligned}$$

5. (c) For an ideal monoatomic gas, the heat capacity T_i, T_f = initial and final temperatures of gas

$$\text{ratio, } \gamma = \frac{5}{3}$$

In an adiabatic process,

$$TV^{\gamma-1} = \text{constant}$$

$$\begin{aligned} \text{i.e. } T_f V_f^{\gamma-1} &= T_i V_i^{\gamma-1} \Rightarrow T_f = T_i \left(\frac{V_i}{V_f} \right)^{\gamma-1} = 300 \left(\frac{1}{2} \right)^{\frac{5}{3}-1} \\ &= 300 \left(\frac{1}{2} \right)^{2/3} \end{aligned}$$

6. (a) Given, frequency of sound produced by sources A and B , $f_A = f_B = 400 \text{ Hz}$

Speed of sound in air, $v = 340 \text{ m/s}$

Apparent frequency heard by the observer when source A is moving towards him,

$$f_A' = \frac{v}{v - v_S} \times f_A = \frac{340}{340 - v_S} \times 400$$

Apparent frequency heard by the observer when source B is moving away from him,

$$f_B' = \frac{v}{v + v_S} \times f_B = \frac{340}{340 + v_S} \times 400$$

Given, Beats = $f_A' - f_B' = 4$

$$\begin{aligned} \frac{340}{340 - v_S} \times 400 - \frac{340}{340 + v_S} \times 400 &= 4 \\ \Rightarrow \frac{34000 \times 2v_S}{340^2 - v_S^2} &= 1 \\ \frac{34000 \times 2v_S}{340^2} &= 1 \quad [\because v_S^2 < 340^2] \\ \Rightarrow v_S &= 1.7 \text{ m/s} \end{aligned}$$

7. (b) Given, density of gas at point A , $\rho_A = \rho_0$

General equation for an ideal gas

$$pV = nRT$$

$$\Rightarrow pV = \frac{m}{M} \cdot RT \quad [m \rightarrow \text{mass}, M \rightarrow \text{molecular mass}]$$

$$\Rightarrow p = \frac{m}{V} \cdot \frac{R}{M} \cdot T$$

$$\Rightarrow p = \rho \left(\frac{R}{M} \right) T \quad \left[\text{where, density } \rho = \frac{m}{V} \right] \dots (i)$$

Applying Eq. (i) at point A and B , respectively.

$$p = \rho_A \left(\frac{R}{M} \right) T_0 \quad \dots (ii)$$

$$2p = \rho_B \left(\frac{R}{M} \right) 3T_0 \quad \dots (iii)$$

From Eqs. (ii) and (iii), we get

$$\begin{aligned} \frac{1}{2} &= \frac{\rho_A}{\rho_B} \cdot \frac{1}{3} \\ \Rightarrow \rho_B &= \frac{2}{3} \rho_A = \frac{2}{3} \rho_0 \end{aligned}$$

8. (c) Force constant K of rubber is given by

$$K = \frac{YA}{l} = \frac{5 \times 10^8 \times 10^{-6}}{0.1} = 5 \times 10^3 \text{ N/m}$$

Now, from conservation of energy

elastic potential energy of cord = kinetic energy of particle

$$\text{i.e. } \frac{1}{2} K (\Delta l)^2 = \frac{1}{2} mv^2$$

$$\begin{aligned} \Rightarrow v &= \sqrt{\frac{K}{m}} \cdot \Delta l \\ &= \sqrt{\frac{5 \times 10^3}{5 \times 10^{-3}}} (0.125 - 0.1) \\ &= 10^3 \times 0.025 = 25 \text{ m/s} \end{aligned}$$

9. (a) By work-energy theorem,

$$W = P \times t = \frac{1}{2} mv^2$$

$$\Rightarrow v^2 = 2 \frac{Pt}{m}$$

$$v = \left(\frac{2Pt}{m} \right)^{1/2}$$

$$\text{or } \frac{ds}{dt} = \left(\frac{2Pt}{m} \right)^{1/2}$$

$$\int ds = \int \left(\frac{2Pt}{m} \right)^{1/2} dt$$

$$s = \left(\frac{2P}{m} \right)^{1/2} \cdot \frac{2}{3} t^{3/2}$$

$$\text{i.e. } s \propto t^{3/2}$$

$$s^2 \propto t^3$$

10. (c) Given, speed of electrons, $v = 5 \times 10^5 \text{ m/s}$

Electrostatic force between two electrons,

$$F_e = k \cdot \frac{e^2}{r^2} \quad \dots (i)$$

Magnetic field produced due to moving electron with velocity v ,

$$B = \frac{\mu_0}{4\pi} \cdot \frac{ev}{r^2} \quad \dots (ii)$$

Magnetic force on proton

$$F_m = Bev = \frac{\mu_0}{4\pi} \cdot \frac{ev}{r^2} \cdot ev \quad (\text{from Eq. (ii)})$$

$$F_m = \frac{\mu_0}{4\pi} \cdot \frac{e^2 v^2}{r^2} \quad \dots (iii)$$

$\therefore$ From Eqs. (i) and (iii), we have

$$\begin{aligned} \frac{F_e}{F_m} &= \frac{ke^2/r^2}{\frac{\mu_0 e^2 v^2}{4\pi r^2}} = \frac{k \cdot 4\pi}{\mu_0 v^2} \\ &= \frac{9 \times 10^9 \times 4 \times 3.14}{4\pi \times 10^{-7} (5 \times 10^5)^2} = 3.6 \times 10^5 \end{aligned}$$

11. (d) From the figure, It is clear that diodes D_1 and D_3 are reverse biased, therefore they will not conduct resistance 11Ω and 5Ω will be not in use but diode D_2 is in forward biased. Therefore, current flows through diode D_2 is same as current through battery, according to the circuit shown after redrawing,

14 SELF STUDY GUIDE BITSAT

∴ Current, $I = \frac{20}{7+3} = 2 \text{ A}$

12. (b) The moment of inertia of disc of radius R about its axis is

$$I = \frac{M' R^2}{2}$$

where, $M' = \text{mass of complete disc}$
 $= 2M$

∴ $I = \frac{2MR^2}{2}$
 $I = MR^2 \dots (i)$

If I_1 be the moment of inertia of semicircular disc about its axis, then disc may be assumed as combination of two semi-circular parts,

Thus, $I = I_1 + I_1 \Rightarrow I_1 = \frac{I}{2} = \frac{MR^2}{2}$

13. (b) Given, total energy given to electron in third orbit,

$$E = 12 \text{ eV}$$

Energy of third orbit of H-atom, $E' = \frac{-13.6}{n^2}$

$$= \frac{-13.6}{3^2} = -1.51 \text{ eV}$$

Ionisation energy of electron of third orbit, $E'' = -E'$

$$= -(-1.51 \text{ eV}) \Rightarrow E'' = 1.51 \text{ eV}$$

Hence, final energy of electron when it comes out of H-atom from third orbit

$$E_F = E - E''$$

$$= 12 - 1.51 = 10.49 \text{ eV}$$

14. (a) Given, $D = 2 \text{ m}$, $d = 0.25 \text{ mm} = 2.5 \times 10^{-4} \text{ cm}$

Velocity of screen, $\frac{dD}{dt} = 5 \text{ m/s}$

Speed of first maxima $= \frac{d\beta}{dt} = ?$

In Young's double slit experiment, fringe width $\beta = \frac{D\lambda}{d}$

On differentiating with respect to t , we get

$$\frac{d\beta}{dt} = \frac{\lambda}{d} \cdot \frac{dD}{dt}$$

$$= \frac{800 \times 10^{-9}}{2.5 \times 10^{-4}} \cdot 5$$

$$= 0.16 \times 10^{-3} \text{ m/s} = 16 \text{ mm/s}$$

15. (c) Given, current through the square loop is $2A$.

$$I = 2A$$

The given situation is shown in the figure. Magnetic field due to wire AB at the centre O is

$$B_{AB} = \frac{\mu_0}{4\pi} \cdot \frac{I}{r} [\sin 45^\circ + \sin 45^\circ]$$

$$= 10^{-7} \times \frac{2}{2 \times 10^{-2}} \left[\frac{1}{\sqrt{2}} + \frac{1}{\sqrt{2}} \right]$$

$$= \sqrt{2} \times 10^{-5} \text{ T [Downward to the plane of square loop]}$$

Since, magnetic field due to side AB, BC, CD and DA is same in magnitude and direction. Hence, net magnetic field at O

$$B = 4 \times B_{AB} = 4\sqrt{2} \times 10^{-5} \text{ T}$$

Wheatstone bridge in balanced condition maintains $\frac{P}{Q} = \frac{R}{S}$

i.e. no current flows through the galvanometer (i.e. $i_g = 0$)

16. (c) The given circuit can be redrawn as

Since, $\frac{R_{AB}}{R_{BC}} = \frac{R_{AD}}{R_{DC}} = \frac{1}{2}$, hence, it is a balanced Wheatstone bridge, therefore current flowing in arm $BD = 0$

$$\therefore R_{eq} = (10 + 20) || (6 + 12) = 30 || 18$$

$$= \frac{30 \times 18}{30 + 18} = 11.25 \Omega$$

$$\therefore I = \frac{V}{R_{eq}} = \frac{10}{11.25} = 0.89 \text{ A} \approx 0.9 \text{ A}$$

17. (a) The flux linked with coil (made of wire of radius r) of area A and magnetic field B , is given by

$$\phi = BA \cos \theta = B \left(\frac{\pi r^2}{2} \right) \cos \omega t$$

$$\phi = \frac{\pi B r^2}{2} \cos \omega t \quad \left[\begin{array}{l} \therefore A = \frac{\pi r^2}{2} \\ \text{and } \theta = \omega t \end{array} \right]$$

By Faraday's law of electromagnetic induction, induced emf, $e = -\frac{d\phi}{dt}$

Hence, after differentiating,

$$e = -\frac{d}{dt} \left(\frac{\pi B r^2}{2} \cos \omega t \right) = \frac{\pi B r^2 \omega}{2} \sin \omega t$$

(where, R = resistance in the circuit)

$$\therefore \text{Power, } P = \frac{e^2}{R} = \frac{\pi^2 B^2 r^4 \omega^2 \sin^2 \omega t}{4R}$$

$$\begin{aligned} \therefore \text{Mean power, } \bar{P} &= \frac{\pi^2 B^2 r^4 \omega^2}{4R} \cdot \overline{\sin^2 \omega t} \\ &= \frac{\pi^2 B^2 r^4 \omega^2}{4R} \cdot \frac{1}{2} \quad \left[\because \overline{\sin^2 \omega t} = \frac{1}{2} \right] \\ &= \frac{(\pi B r^2 \omega)^2}{8R} \end{aligned}$$

18. (b) For the given convex lens, focal length, $f = 25$ cm

Magnification of lens in term of u and f is given by

$$m = \frac{f}{f + u} = \frac{25}{25 + u} \quad \dots (i)$$

When the image is real, then $m = -2$ and $u = -x_1$

$$\therefore \text{From Eq. (i), } -2 = \frac{25}{25 - x_1} \Rightarrow x_1 = \frac{75}{2}$$

Again, when the image is virtual, then $m = 2$ and $u = -x_2$

$$\therefore \text{From Eq. (i), } 2 = \frac{25}{25 - x_2} \Rightarrow x_2 = \frac{25}{2}$$

Hence, the ratio of x_2 and x_1 is

$$\therefore \frac{x_2}{x_1} = \frac{25/2}{75/2} = \frac{1}{3}$$

19. (d) For perfectly elastic collision,

total momentum before collision

= total momentum after collision

$$\text{i.e. } m \cdot u + \frac{3m}{4} \times 0 = mv_x + \frac{3m}{4} \cdot v_y$$

$$\Rightarrow 4u = 4v_x + 3v_y \quad \dots (i)$$

Coefficient of restitution,

$$e = \frac{\text{Velocity of separation } (v_y - v_x) \text{ after collision}}{\text{Velocity of approach } (u_x - u_y) \text{ before collision}}$$

$$\Rightarrow 1 = \frac{v_y - v_x}{u - 0} \quad \left[\because u_x = v \text{ and } u_y = v \right]$$

$$u = v_y - v_x \quad \dots (ii)$$

Solving Eqs. (i) and (ii), we have

$$\begin{aligned} v_x &= \frac{u}{7} \text{ and } u_y = \frac{8u}{7} \\ \therefore \frac{\lambda_y}{\lambda_x} &= \frac{h/mv_y}{h/\frac{3m}{4} \cdot v_x} = \frac{3}{4} \cdot \frac{v_x}{v_y} = \frac{3}{4} \cdot \frac{u/7}{8u/7} = \frac{3}{32} \end{aligned}$$

20. (c) We know that, velocity of light c is terms of ϵ_0 and μ_0 is given by

$$c = \frac{1}{\sqrt{\mu_0 \epsilon_0}} \Rightarrow c^2 = \frac{1}{\mu_0 \epsilon_0}$$

$$c^2 = \frac{1}{\mu_0^2} \cdot \frac{\mu_0}{\epsilon_0} \Rightarrow c = \frac{1}{\mu_0} \sqrt{\frac{\mu_0}{\epsilon_0}} \Rightarrow \sqrt{\frac{\mu_0}{\epsilon_0}} = c \mu_0 \quad \dots (i)$$

$$\begin{aligned} \text{Dimension of magnetic field, } B &= \frac{\tau}{N/A} = \frac{[ML^2T^{-2}]}{[A][L^2]} \\ &= [MA^{-1}T^{-2}] \end{aligned}$$

Again, $B = \mu_0 n I$

$$\therefore \mu_0 = \frac{B}{nI} = \frac{[MA^{-1}T^{-2}]}{[L^{-1}][A]} = [MLA^{-2}T^{-2}]$$

$$\mu_0 = [MLA^{-2}T^{-2}] \quad \dots (ii)$$

$$\text{and } C = [LT^{-1}] \quad \dots (iii)$$

From Eqs. (i), (ii) and (iii), we get

$$\sqrt{\frac{\mu_0}{\epsilon_0}} = [LT^{-1}] [MLA^{-2}T^{-2}] = [ML^2T^{-3}A^{-2}]$$

21. (a) Given, $F = at$

when, $t = 0$, then linear momentum = p

when, $t = T$, then linear momentum = $2p$

According to Newton's law of motion,

$$\text{applied force, } F = \frac{dp}{dt}$$

$$\text{or, } dp = F dt$$

$$dp = at dt$$

$$\text{or, } \int_p^{2p} dp = a \int_0^T t dt$$

$$(2p - p) = a \cdot \frac{T^2}{2}$$

$$\Rightarrow \frac{2p}{a} = T^2 \Rightarrow T = \sqrt{\frac{2p}{a}}$$

22. (d) Block does not move upto a maximum applied force of 3 N down the inclined plane.

Equation of motion is $3 + mg \sin 30^\circ = F$

$$3 + mg \sin 30^\circ = \mu mg \cos 30^\circ \quad \dots (i)$$

Similarly, block also does not move upto a maximum applied force of 12 N up the plane.

Now, equation of motion is

$$mg \sin 30^\circ + F = 12$$

$$\text{or, } mg \sin 30^\circ + \mu mg \cos 30^\circ = 12 \quad \dots (ii)$$

Solving Eqs. (i) and (ii), we have

$$mg \sin 30^\circ = \frac{9}{2} \text{ and } \mu mg \cos 30^\circ = \frac{15}{2}$$

Hence, dividing

$$\therefore \frac{1}{\mu} \tan 30^\circ = \frac{9/2}{15/2} = \frac{3}{2} \Rightarrow \mu = \frac{5}{3\sqrt{3}}$$

23. (a) If middle portion of lens is painted black, then less number of refracted rays will intersect, therefore intensity of the corresponding image of object will be less. Though, the rays coming from object refracted with small portion of lens, but complete image of object will be formed but of lesser intensity.

24. (d) Given, speed of sound, $v = 340$ m/s

Length of open organ pipe, $l = 2$ m

Frequency, $f = 1200$ Hz

For open organ pipe,

$$\text{Fundamental frequency, } f_0 = \frac{v}{2l} = \frac{340}{2 \times 2} = 85$$

$\therefore$ Number of tones present in the open organ pipe

$$= \frac{f}{f_0} = \frac{1200}{85} = 14.11 \approx 14$$

25. (a) Given, charge on proton, $q = e$

$$= 1.6 \times 10^{-19} \text{ C}$$

Radius, $r = 2 \text{ mm} = 2 \times 10^{-3} \text{ cm}$

Frequency, $f = 10$ Hz

Current associated by proton is given by

$$I = \frac{q}{t} \quad [T \rightarrow \text{time period}]$$

$$= qf \quad \left[\because T = \frac{1}{f} \right]$$

$$= 1.6 \times 10^{-19} \times 10 = 1.6 \times 10^{-18} \text{ A}$$

$\therefore$ Magnetic dipole moment, $M = IA$

$$= I \cdot \pi r^2 = 1.6 \times 10^{-18} \times 3.14 \times (2 \times 10^{-3})^2$$

$$= 2 \times 10^{-24} \text{ A-m}^2$$

26. (b) When capacitor is fully charged, then it acts like a open switch, therefore $8 \text{ k}\Omega$ resistor has no use. So, rest of the resistances $4 \text{ k}\Omega$, $7 \text{ k}\Omega$ and $9 \text{ k}\Omega$ will be in series.

Hence, current drawn from cell

$$I = \frac{10}{(4 + 7 + 9) \times 10^3} = \frac{10}{20 \times 10^3} = 0.5 \text{ mA}$$

27. (c) The charge on the capacitor at time t in a discharging circuit is given by $q = q_0 e^{-t/\tau}$

where, $\tau = RC$ = time constant

$$\therefore q = q_0 e^{-t/RC}$$

$$\text{when, } q = \frac{q_0}{2}$$

$$\text{then } \frac{q_0}{2} = q_0 e^{-t/RC}$$

$$\frac{1}{2} = e^{-t/RC}$$

Taking natural log on both side $\log_e \left(\frac{1}{2} \right) = \log_e e^{-t/RC}$

$$-\log_e 2 = -\frac{t}{RC} \log_e e \Rightarrow t = RC \log_e 2$$

28. (d) If v be the velocity in the inter planetary space and U_i , U_f initial and final PE

Then, by the law of conservation of energy,

$$U_i + K_i = U_f + K_f$$

$$\frac{-GM_e m}{R_e} + \frac{1}{2} m (3v_e)^2 = 0 + \frac{1}{2} m v^2$$

$$\frac{-GM_e}{R_e} + \frac{9}{2} v_e^2 = \frac{1}{2} v^2$$

$$\Rightarrow \frac{-2GM_e}{R_e} + 9v_e^2 = v^2$$

$$\Rightarrow \frac{-2gR_e^2}{R_e} + 9v_e^2 = v^2 \quad [\because GM_e = gR_e^2]$$

$$-2gR_e + 9 \times 2 = gR_e = v^2, \quad [\because v_e^2 = 2gR_e]$$

$$16gR_e = v^2$$

$$8.2gR_e = v^2$$

$$\Rightarrow v = \sqrt{8.2} \cdot \sqrt{2gR_e} = 2\sqrt{2} v_e$$

29. (d) Given, density of bob, $\rho = \frac{4}{3} \times 10^3 \text{ kg/m}^3$

Density of water, $\sigma = 10^3 \text{ kg/m}^3$

If g' be gravitational acceleration in water then,

$$g' = g \left(1 - \frac{\sigma}{\rho} \right) = g \left(1 - \frac{10^3}{\frac{4}{3} \times 10^3} \right) = \frac{g}{4}$$

$$\text{As, } T_{\text{air}} = 2\pi \sqrt{\frac{l}{g}},$$

$$\text{Similarly, } T_{\text{water}} = 2\pi \sqrt{\frac{l}{g'}} [T_{\text{water}} = 2s] \left(g' = \frac{g}{4} \right)$$

$$2 = 2\pi \sqrt{\frac{l}{g/4}} = 2\pi \sqrt{\frac{l}{g}} \cdot 2$$

$$2 = 2 \cdot T_{\text{air}} \Rightarrow T_{\text{air}} = 1 \text{ s}$$

30. (c) By Newton's law of motion

$$F - f_s = ma \quad \dots (i)$$

 and torque, $\tau = I\alpha$

 where, α = tangential component of acceleration

 I = moment of inertia

$$\Rightarrow fR = I\alpha$$

$$fR = \frac{MR^2}{2} \cdot \frac{a}{R} \quad \left[\because I = \frac{MR^2}{2} \text{ and } \alpha = \frac{a}{R} \right]$$

$$\Rightarrow f = \frac{ma}{2}$$

$$\therefore F = f + ma = \frac{ma}{2} + ma = \frac{3ma}{2}$$

 31. (a) Velocity of projectile at time t is given by

$$\mathbf{v} = \mathbf{u} - \mathbf{g}t\mathbf{j}$$

$$\mathbf{v} = \hat{i} + \sqrt{3}\hat{j} - 10t\hat{j}$$

$$\therefore \mathbf{r} = \int \mathbf{v} dt$$

$$= \int (\hat{i} + \sqrt{3}\hat{j} - 10t\hat{j}) dt$$

$$= t\hat{i} + \sqrt{3}t\hat{j} - 5t^2\hat{j}$$

$$= t\hat{i} + \sqrt{3}t\hat{j} - 5t^2\hat{j}$$

$$\mathbf{r} = t\hat{i} + (\sqrt{3}t - 5t^2)\hat{j}$$

$$\text{or } x\hat{i} + y\hat{j} = t\hat{i} + (\sqrt{3}t - 5t^2)\hat{j}$$

$$\text{On comparing, } x = t \quad \dots (i)$$

$$\text{and } y = \sqrt{3}t - 5t^2 \quad \dots (ii)$$

From Eqs (i) and (ii), we get

$$y = \sqrt{3}x - 5x^2$$

 32. (d) $\mathbf{F} = 20\hat{i} + 10\hat{j}$

$$\therefore F_x = 20 \text{ N and } F_y = 10 \text{ N}$$

 $\therefore$ Acceleration,

$$a_x = \frac{F_x}{m} = \frac{20}{1}$$

$$a_x = 20 \text{ m/s}^2$$

and

$$a_y = \frac{F_y}{m} = \frac{10}{1} = 10 \text{ m/s}^2$$

 $\therefore$ Displacement of body in x-direction in 2s.

$$x = u_x t + \frac{1}{2} a_x t^2$$

$$= 0 + \frac{1}{2} \times 20 \times 2^2$$

$$= 40 \text{ m}$$

 $\therefore$ Displacement of body in y-direction in 2s.

$$y = u_y t + \frac{1}{2} a_y t^2$$

$$= 0 + \frac{1}{2} \times 10 \times 2^2$$

$$= 20 \text{ m}$$

 $\therefore$ Position of the body at $t = 2 \text{ s}$

$$\mathbf{r} = x\hat{i} + y\hat{j}$$

$$\mathbf{r} = 40\hat{i} + 20\hat{j}$$

33. (b) Potential energy of cylinder at top position

$$U = mg(AB)$$

$$= 2 \times 10 [1 \cdot \sin 30^\circ] \quad \left[\because \sin 30^\circ = \frac{AB}{BC} \right]$$

$$= 10 \text{ J}$$

 If v is the linear speed of cylinder when it reaches at bottom, then at bottom, total potential energy of cylinder is converted into kinetic energy,

$$\text{i.e. } K = U$$

$$\frac{1}{2} I\omega^2 + \frac{1}{2} mv^2 = 10$$

$$\frac{1}{2} \cdot \frac{mr^2}{2} \cdot \frac{v^2}{r^2} + \frac{1}{2} mv^2 = 10 \quad \left[\because \omega = \frac{v}{r} \right]$$

$$\Rightarrow \frac{3}{4} mv^2 = 10$$

$$v = \sqrt{\frac{40}{3m}} = \sqrt{\frac{40}{3 \times 2}} = \sqrt{\frac{20}{3}} \text{ m/s}$$

34. (a) According to the question,

$$F_1 = -k_1 x \text{ and } F_2 = -k_2 x$$

 $\therefore$ Frequency of oscillation

$$v_1 = \frac{1}{2\pi} \sqrt{\frac{k_1}{m}}$$

$$5 = \frac{1}{2\pi} \sqrt{\frac{k_1}{m}} \Rightarrow k_1 = 100 \pi^2 m$$

$$\text{Similarly, } 12 = \frac{1}{2\pi} \sqrt{\frac{k_2}{m}}$$

$$\Rightarrow k_2 = 576 \pi^2 m$$

Now, $F = F_1 + F_2 = -(k_1 + k_2) x$

$\therefore$ Frequency of oscillation,

$$v = \frac{1}{2\pi} \sqrt{\frac{k_1 + k_2}{m}} = \frac{1}{2\pi} \sqrt{\frac{100\pi^2 m + 576\pi^2 m}{m}}$$

$$\Rightarrow v = 13 \text{ Hz}$$

35. (c) Number of moles in $2 \times 10^{-4} \text{ kg}$

$$\mu = \frac{\text{Mass of hydrogen in gram}}{\text{Molecules mass}}$$

$$= \frac{2 \times 10^{-4} \times 10^3}{2}$$

$$= 0.1 \text{ mole}$$

$$\therefore pV = \mu RT$$

$$\frac{pV}{T} = \mu R = 0.1 \times R = \frac{R}{10}$$

36. (a) Given, for an ammeter, $I_g = 1 \text{ A}$, $R_g = 15 \Omega$

Total current, $I = 4 \text{ A}$

If R_s be the shunt resistance, then

according to the question circuit diagram is given,

($R_s \parallel R_g$, hence have equal potential difference)

where, $I_g R_g = (I - I_g) R_s$

$$R_s = \frac{I_g}{I - I_g} \times R_g = \frac{1}{4 - 1} \times 15 = 5 \Omega$$

37. (c) The electric field intensity at a point lying outside the sphere (non-conducting) is

$$E = \frac{1}{4\pi\epsilon_0} \cdot \frac{q}{r^2}$$

$$\text{i.e. } E \propto \frac{1}{r^2} \quad \dots (i)$$

The electric field intensity at the surface ($r = R$),

$$E = \frac{1}{4\pi\epsilon_0} \frac{q}{R^2} \Rightarrow E \propto \frac{1}{R^2}$$

where, R being the radius of sphere,

The electric field intensity inside the sphere is

$$E = \frac{qr}{4\pi\epsilon_0 R^3} \Rightarrow E \propto r$$

At the centre of sphere, $r = 0$, $\therefore E = 0$

38. (a) Given, $R = (56 \pm 5.6) \text{ k}\Omega$

$$= 56 \text{ k}\Omega \pm 10\% \text{ of } 56 \text{ k}\Omega$$

$$= 56 \times 10^3 \pm 10\% \Omega$$

As per the colour code for carbon resistors, the colour assigned to numbers

5 $\rightarrow$ Green

6 $\rightarrow$ Blue

3 $\rightarrow$ Orange

For 10% accuracy or tolerance, the colour is silver.

Hence, the bands of colours of carbon resistor in sequence are green, blue, orange and silver.

39. (c) When two waves with same frequency and constant phase difference interfere to each other, then after interference, intensity of resultant wave is distributed such that it is maximum at some points [constructive interference or bright fringes] and minimum at another points. [destructive interference or dark fringes].

Hence, energy is distributed and remains constant [in the form of bright and dark fringes]

40. (d) According to the given graph ($I - t$) induced current (I) is obtained from the slope.

$$\text{Hence, } I = \frac{1}{R} \frac{d\phi}{dt}$$

$$\Rightarrow d\phi = I dt. R = \text{area of triangle } POS \times R = \frac{8 \times 0.2}{2} \times 50 = 40 \text{ Wb}$$

Chemistry

41. (a) Let atoms of Y in ccp structure = 100

Then, number of tetrahedral voids = 2×100

$\therefore$ Number of X atoms = $\frac{2}{3}$ rd of tetrahedral voids

$$\therefore \text{Number of X atoms} = \frac{2}{3} \times 200 = \frac{400}{3}$$

$$\text{Thus, } \frac{X}{Y} = \frac{400}{3 \times 100} = \frac{400}{300} = \frac{4}{3}$$

Hence, formula of compound can be = X_4Y_3 .

42. (a) Given, density (d_1) at 30°C (T_1) = 1.35 kg/m^3

To find density (d_2) at S.T.P, (i.e at 760 torr and 273 K (T_2) temperature), we use formula

$$\frac{d_2}{d_1} = \frac{p_2 \cdot T_1}{p_1 T_2}$$

where, $p_1 = 768 \text{ torr}$ (Pressure at 30°C , i.e. at 303 K)

$p_2 = 760 \text{ torr}$ (Pressure at 273 K)

$$\therefore d_2 = \frac{d_1 \times p_2 \times T_1}{p_1 \times T_2} = \frac{1.35 \times 760 \times 303}{768 \times 273} = 1.48 \text{ kg/m}^3$$

43. (c) $\Delta_0 = (-0.4 \times n_{t_{2g}}) + (0.6 \times n_{e_g})$

where, n = number of electrons in $n_{t_{2g}}$ and n_{e_g} .

CFSE of given d -electrons configuration are as follows

a. For high spin, d^6 ;

$$\Delta_0 (\text{CFSE}) = -0.4 \times 4 + 0.6 \times 2 = -0.4$$

b. For low spin, d^4 ;

$$\Delta_0 (\text{CFSE}) = -0.4 \times 4 + 0.6 \times 0 = 1.6$$

c. For low spin d^5

$$\Delta_0 (\text{CFSE}) = -0.4 \times 5 + 0.6 \times 0 = -2.0$$

d. For high spin, d^7

$$\Delta_0 (\text{CFSE}) = -0.4 \times 5 + 0.6 \times 2 = -0.8$$

Neglecting -ve sign (as it indicates that energy is released).

Hence, maximum Δ_0 (CFSE) value is shown by low spin d^5 configuration.

44. (b) According to Rydberg's equation

$$\bar{\nu} = \frac{1}{\lambda} = RZ^2 \left[\frac{1}{n_L^2} - \frac{1}{n_H^2} \right]$$

where,

$\bar{\nu}$ = wave number

λ = wavelength

R = Rydberg constant ($= 109677 \text{ cm}^{-1}$)

Z = atomic number

n_L = lower energy state

n_H = higher energy state.

i.e. $\frac{1}{\lambda} \propto Z^2$

Thus, $\frac{\lambda(\text{He}^+)}{\lambda(\text{H})} = \frac{Z^2(\text{H})}{Z^2(\text{He}^+)}$

To find $\lambda(\text{He}) = ?$

Given, $\lambda(\text{H}) = 912 \text{ nm}$

$$Z(\text{H}) = 1$$

$$Z(\text{He}) = 2$$

$$\therefore \lambda(\text{He}^+) = \frac{1 \times 912}{4} = 22.8 \text{ nm}$$

We known that $\Delta H = \Delta E + \Delta nRT$

$$\Delta n = 10 - 12 = -2$$

$$\Delta H = -1228.2 \times 10^3 + (-2) \times 2 \times 298$$

$$= -1229393 \text{ Ca}$$

$$= -1229.39 \text{ kcal}$$

46. (a) Among the formation of B , C , D and E , the slowest step is the rate determining step. As formation of B , i.e. 0.002 mol/h per mole of A is the slowest step. Hence, step-(I) is the rate determining step.

47. (d)

Sulphanilic acid exist as dipolar ion (zwitter ion); act as inner salt and SO_3H group diminishes the basic character of $-\text{NH}_2$.

48. (c) The structure of PO_4^{3-} is as follows

As phosphorous central atom forms four (4) sigma bonds and has no lone pair of electrons. It uses four hybrid orbital and thus, hybridisation of p -atom is sp^3 .

49. (c) Electronic configuration of the given species are

a. Sm^{2+} ($Z = 62$) = $[\text{Xe}] 4f^6$ b. Eu^{2+} ($Z = 63$) = $[\text{Xe}] 4f^7$

c. Yb^{2+} ($Z = 70$) = $[\text{Xe}] 4f^{14}$ d. Ce^{2+} ($Z = 58$) = $[\text{Xe}] 4f^1 5d^1$

On the basis of above electronic configuration, only Yb^{2+} ($Z = 70$) has no unpaired electrons i.e. has fully-filled orbitals. Thus it is dimagnetic in nature.

50. (b) Alcohol in which OH group is directly bonded to benzene are aromatic alcohols.

It is not an aromatic alcohol because OH is not bonded directly with the benzene group.

It is also not an aromatic alcohol because $-\text{OH}$ group is not directly bonded with the benzene ring.

It is an aromatic alcohol because $-\text{OH}$ is directly bonded with the benzene ring.

51. (b) RSiCl_3 gives cross-linked silicon polymer on hydrolysis.

52. (a) Let k be the rate constant of given reaction

From the slowest step $r = k'[\text{O}][\text{O}_3]$... (i)

To eliminate $[\text{O}]$, (From fast step)

$$k_{\text{eq}} = \frac{[\text{O}_2][\text{O}]}{[\text{O}_3]}$$

$$[\text{O}] = \frac{k_{\text{eq}}[\text{O}_3]}{[\text{O}_2]}$$

Now, substituting value of $[\text{O}]$ in Eq (i)

$$r = \frac{k'k_{\text{eq}}[\text{O}_3][\text{O}_3]}{[\text{O}_2]}$$

Let $k'k_{\text{eq}} = k$

Thus, $r = k[\text{O}_3]^2[\text{O}_2]^{-1}$

53. (a) Depression in freezing point is given as $\Delta T_f = K_f$

$$\text{Molality of solution } (m) = \frac{\Delta T_f}{K_f}$$

$$\text{or } m = \frac{0.6}{1.86} = 0.322 \text{ m}$$

Elevation in boiling point of solution is given as

$$\Delta T_b = K_b \times m$$

$$\Delta T_b = 0.512 \times 0.322$$

$$\Delta T_b = 0.165$$

$$\therefore \text{Boiling point of solution} = 373 + 0.16 \\ = 373.16 \text{ K}$$

54. (a) The strength of acidic character of boron trihalides depends upon $p\pi - p\pi$ back bonding.

In boron trihalides, $p\pi - p\pi$ back bonding occurs due to empty orbital of boron and filled orbitals of halogens.

Phenomenon of back bonding in BF_3 molecule

The $p\pi - p\pi$ back bonding is shown maximum by BF_3 , as the size of B and F are small and comparatively same. Due to this effect tendency of accepting lone-pair of electrons of boron decreases as size of halogen increases. The order of size of halogens are $\text{F} < \text{Cl} < \text{Br} < \text{I}$. Thus, acidic nature is in order

55. (d) **Key idea** Mobility of alkali ions in aqueous solution $\propto$ size of ion

$$\propto \frac{1}{\text{size of hydrated ion}}$$

The mobility of alkali ions is inversely proportional to the size of ion in hydrated state, because smaller the ion more it will get hydrated and becomes larger in size, thus its ionic mobility decreases.

Hence, correct order of mobility is

56. (c) Bakelite is a thermosetting plastic which is formed by the reaction of phenol with HCHO in the presence of H_2SO_4 (conc).

The reaction occurs as follows:

A cross-linked condensation polymer (at o - and p -position) bakelite is thus produced.

57. (c) Paracetamol is the drug, that can be used as an antipyretic as well as an analgesic, i.e. to reduce the fever and gives relieve from pain. Its structure is as follows

58. (a) In the given structure, ring one (I) has one o -atom and is a 6 membered ring, thus is called pyranose ring, whereas ring (II) has one o -atom and is a five membered ring, thus is called furanose.

The disaccharide is linked by a glycosidic bond between C—1 of glucose (in the α -position, α linkage) and C—2 of fructose (in the β -position, β -linkage).

59. (c) Due to size and geometries of bases, the only possible pairing in DNA are between G (guanine) and C (cytosine) through three H-bonds and between A (adenine) and T (thymine) through two H-bonds.

Thus, the complementary strand of DNA will be

60. (a) When Na_2SO_3 reacts with hot and dil H_2SO_4 , it gives $\text{SO}_2(\text{g})$ which decolourises bromine-water.

The reaction proceed as follows:

61. (b) The given reaction is for preparation of DDT (dichlorodiphenyl trichloroethane). Complete reaction is given as follows.

62. (d) The mixture of $\text{CO}(\text{g})$ and $\text{H}_2(\text{g})$ is known water gas as it is used in the synthesis of other compounds,

63. (c) Chromium hydroxide, i.e. $\text{Cr}(\text{OH})_3$ when reacts with NaOH and Na_2O_2 , gives yellow colour of sodium chromate. The whole reaction is as follows

64. (a) Cl is the good leaving group, i.e. is the weakest nucleophile among the given options

$[\text{Cl}, \text{NH}_2, \text{OC}_2\text{H}_5 \text{ and } \text{OCOCH}_3]$, the rate of reaction is faster, when 'Z' is 'Cl'.

65. (b) **Key-idea**

Use Nernst equation, i.e.

$$E(\text{emf}) = E_{\text{cell}}^\circ - \frac{0.0591}{2} \log \frac{[\text{Zn}^{2+}]}{[\text{Cu}^{2+}]}$$

For reaction (i)

$$E_1 = E_{\text{cell}}^\circ - \frac{0.0591}{2} \log \frac{0.1}{1}$$

$$E_1 = E_{\text{cell}}^\circ + \frac{0.0591}{2}$$

For reaction (ii)

$$E_2 = E_{\text{cell}}^\circ - \frac{0.0591}{2} \log \frac{1}{1} = 0$$

$$E_2 = E_{\text{cell}}^\circ$$

For reaction (iii)

$$E_3 = E_{\text{cell}}^\circ - \frac{0.0591}{2} \log \frac{1}{0.1}$$

$$E_3 = E_{\text{cell}}^\circ - \frac{0.0591}{2}$$

Hence, $E_1 > E_2 > E_3$.

66. (c) This test is used for the presence of sulphur in any compound. When sodium nitroprusside, react with sulphide ion, (e.g. Na_2S) the following reaction takes place

67. (c)

where, E_a = activation energy of forward reaction

E_a' = activation energy of backward reaction

The above energy profile diagram shows that $E_a > E_a'$

The potential energy of the product is greater than that of the reactant, so the reaction is endothermic.

$$E_a = E_a' + \Delta E$$

$$E_t = E_a \text{ or } E_t > E_a'$$

68. (c) The $\text{H}_2\text{C}=\text{CH}_2 + \text{C}_6\text{H}_6$ on reaction produce ethyl benzene as follows

69. (b) Given, pH of solution A = 3

$[\text{H}^+]$ of A = 10^{-3}M and, pH of solution B = 2

$[\text{H}^+]$ of B = 10^{-2}M

Thus, total $[\text{H}^+]$ are $= 10^{-3} + 10^{-2} = 1.1 \times 10^{-2}\text{M}$

$$\begin{aligned} \therefore \text{pH}_{\text{(final)}} &= -\log [\text{H}^+] \\ &= -\log [1.1 \times 10^{-2}] \\ &= 3 - \log 1.1 \\ &= 3 - 1.04 = 1.9 \end{aligned}$$

22 SELF STUDY GUIDE BITSAT

70. (a) Freundlich isotherm is related with the pressure of gas adsorbed, as follows $\frac{x}{m} = k \cdot p^{1/n}$

where, $\frac{x}{m}$ = amount of gas (x) adsorbed over the surface of mass (m).

p = pressure of gas

k = freundlich constant

Thus, value of 'n' is always greater than 1 and therefore value of $1/n$ lies between 0 and 1.

71. (c) Electronic configuration of Mn is ($Z = 25$) = $[Ar]3d^5 4s^2$

$\therefore$ Electronic configuration of Mn^{4+} is $Mn^{4+} = [Ar] 3d^3$

Thus, Mn^{4+} has 3-unpaired electron and its spin only magnetic moment (μ) is, $\mu = \sqrt{n(n+2)} \text{ BM}$

where, n = number of unpaired electrons.

$$\mu = \sqrt{3(3+2)} \cdot \text{BM} \Rightarrow \mu = \sqrt{15} = 3.87 \text{ BM} \approx 4 \text{ BM}$$

72. (a) $\therefore$ Gram equivalents of an acid

$$= \text{Gram equivalents of KOH i.e. } \frac{0.45}{E} = \frac{20 \times 0.5}{1000}$$

$$\text{where, } E = \text{Equivalent mass } E = \frac{0.45 \times 1000}{20 \times 0.5} = 45$$

$$\text{Thus, basicity} = \frac{90}{45} = 2$$

$$\left[\therefore \text{Basicity} = \frac{\text{Molecular mass}}{\text{Equivalent mass}} \right]$$

73. (a) Given, $A + B \rightleftharpoons C + D$

initial conc. 4 4 0 0

at equilibrium (4 - 2) (4 - 2) 2 2

i.e. 2 2 2 2

$$\therefore K_{(eq)} = \frac{2 \times 2}{2 \times 2} = 1$$

74. (b) Given, 125 ml of 1 M $AgNO_3$

which is equal to 13.5 g of Ag

$\therefore$ 1000 ml of $AgNO_3$ = 108 g of Ag

$$\therefore 125 \text{ ml of } AgNO_3 = \frac{108 \times 125}{1000} = 13.5 \text{ g}$$

Also, $\therefore$ 108 g of Ag is deposited by = 96500 C

$$\therefore 13.5 \text{ g of Ag is deposited by} = \frac{96500 \times 13.5}{108} = 12062.5 \text{ C}$$

$$\therefore Q = it$$

$$\therefore t \text{ (time)} = Q / i = \frac{12062.50}{241.25}, t = 50 \text{ sec}$$

75. (b) Orbitals of nearly equal energy are called degenerated orbitals. As, energy of,

$$a. \sigma 2s > \sigma^* 2s \quad b. \pi 2p_x \approx \pi 2p_y$$

$$c. \pi^* 2p_x < \sigma^* 2p_z \quad d. \sigma 2p_x < \sigma^* 2p_z$$

Thus, only $\pi 2p_x$ and $\pi 2p_y$ are degenerate orbitals.

76. (c) Total energy (E) of any photon is given by the relation :

$$E = \frac{hc}{\lambda}$$

where, h = Planck's constant = $6.6 \times 10^{-34} \text{ J-s}$

c = velocity of light = $3 \times 10^{10} \text{ m/s}$

λ = wave-length = $1.5 \times 10^{-10} \text{ m}$, i.e. (150 pm)

$$\text{Thus, } E = \frac{hc}{\lambda} = \frac{6.6 \times 10^{-34} \times 3 \times 10^8}{1.5 \times 10^{-10}}; E = 1.32 \times 10^{-15} \text{ J}$$

and, energy of ejected electron (E')

$$E' = \frac{1}{2} mv^2,$$

where,

m = mass of electron = $9.1 \times 10^{-31} \text{ kg}$

v = velocity of electron = $1.5 \times 10^7 \text{ m/s}$

$$E' = \frac{1}{2} mv^2 = \frac{1}{2} \times 9.1 \times 10^{-31} \times (1.5 \times 10^7)^2$$

$$E' = 1.024 \times 10^{-16}$$

Thus, total energy of photon = binding energy of electron (B) + energy of ejected electron (E')

$$\text{Thus, } 1.32 \times 10^{-15} = (B) + (E')$$

$$\therefore (B) = (E) - (E') = [1.32 \times 10^{-15}] - [1.024 \times 10^{-16}]$$

$$= 1.2176 \times 10^{-15} \text{ J}$$

$$= \frac{1.2176 \times 10^{-15}}{1.6 \times 10^{-19}} \text{ eV} = 7.6 \times 10^3 \text{ eV}$$

77. (b) The degree of unsaturation for compound C_7H_8 is three (3), as it reacts with Cl_2/Δ . Hence C_7H_8 is toluene, i.e. $C_6H_5 \cdot CH_3$. The whole reaction occurs as follows:

78. (c)

Element	Ratio (by weight)	Atomic weight	Mol Ratio	Simplest Mol Ratio
C	9	12	$\frac{9}{12} = 0.75$	$\frac{0.75}{0.25} = 3$
H	1	1	$\frac{1}{1} = 1.00$	$\frac{1.00}{0.25} = 4$
N	3.5	14	$\frac{3.5}{14} = 0.25$	$\frac{0.25}{0.25} = 1$

$$\therefore \text{Empirical formula} = C_3H_4N$$

The empirical formula mass = $3 \times 12 + 4 \times 1 + 14 = 54 \text{ g}$

Given, molecular mass = 108 g

Thus,
$$n = \frac{108}{54} = 2$$

Hence, molecular formula = (Empirical formula) $\times$ 2
 $(C_3H_4N) \times 2 = C_6H_8N_2$

79. (a) **Key idea** pi-bond do not participate in hybridisation

80. (a) In bassemer converter, copper-sulphide is partially oxidised to cuprous oxide, which further reacts with the remaining copper sulphide to give copper and sulphur di oxide, i.e. $Cu_2S + 2Cu_2O \longrightarrow 6Cu + SO_2$

English Proficiency

81. (b) 'Many a' takes singular noun, as well as singular verb. So replace 'have' by 'has'.
 e.g. Many a player is injured lately.
82. (a) The correct syntax for interrogative sentences is 'wh' word + do/does+sub+verb+?
 So, we should replace 'it takes' by 'does it take' e.g. How long does it take to build a new house?
83. (c) Replace 'his' by 'ones' to make the possessive correct.
 e.g. One should respect one's parents.
84. (a) Assured is followed by preposition 'of'.
 e.g. I am assured of my promotion by next month.
85. (d) Preposition 'to' should be used with 'submit' here.
 e.g., When exams are over then candidates are required to submit their papers.
86. (d) Audacious (Adjective) means bold or fearless. So, its correct antonym will be 'timid', which means 'lacking in courage or confidence'.
Antonyms Careful, meek, mild
Synonyms Daring, bold, unafraid.
 e.g. He is an audacious soldier.
87. (c) Cogent (Adjective), which means reasonable and convincing. The correct antonym will be 'dissuasive', which means divert from the measure or purpose.
Antonyms Unconvincing, muddle, vague
Synonyms Convincing, logical, compelling.
 e.g. He put forward some cogent reasons for initiating the project.

Logical Reasoning

96. (d) In the 'College', education is given to 'Students', in the same way, treatment is given to the 'Patient' in 'Hospital'.
97. (b) Except 35, all others are multiples of 9, but 35 is the multiple of 5 and 7.
98. (c) Pattern of the series is as shown below

88. (b) Taint (Noun) means a mark of disgrace or blemish. The correct antonym will be 'clear', which means free of ambiguity or doubt.
Antonyms Blank, esteem, respect.
Synonyms Contamination, corruption, stigma e.g. His reputation was tainted by allegations of illegal activity.
89. (b) Vivacious (Adjective) means full of life and energy or animated.
 So, its correct synonym will be 'Lively'.
Synonyms Spirited, active, jolly
Antonyms Boring, unhappy, dull
 e.g. She is a dark-haired and vivacious lady.
90. (b) Sporadic (Adjective) means rare and scattered in occurrence. Here 'scattered' has the same sense. It is the correct synonym.
Synonyms Desultory, isolated, random.
Antonyms Common, systematic, usual
 e.g. Suddenly, sporadic fighting broke out in the town.
91. (d) Both official and corporate India is allergic to 'mention of clean technology.'
92. (d) 'Failure In crops' is a life and death question to many Indians.
93. (a) The most similar in meaning to the word 'profligacy' is 'wastefulness'.
94. (a) India cannot tolerate any further 'crop failure'.
95. (d) The reason could be 'US wants to use it as a handle against the developing countries in the forthcoming meet'.

This series contains two separate series. In first series, 1 is added in first two steps and 4 is added in third and fourth steps.

In second series, 2 and 4 is added alternately.

99. (b) From given information,
 Ramesh > Mohan > Shyam ... (i)
 Gautam > Ramesh > Rajat ... (ii)
 Shyam > Rajat ... (iii)
 Combining Eqs. (i), (ii) and (iii), we get,

Gautam > Ramesh > Mohan > Shyam > Rajat

Hence, Rajat is the shortest among all.

100. (b) If figure shown in option (b), is placed in the place of missing portion of the original figure, then it is completed as shown below

101. (b) Figure given in option b. can be formed by joining the pieces given in question figure, as shown below.

102. (d) In figure (X), the square sheet of paper is being folded along the vertical line of symmetry, so that right half of the sheet overlaps the left half. In figure (Y), the sheet is folded further to a quarter. In figure (Z), two squares are punched in the folded sheet. Clearly, the punched squares will be created in each quarter of the paper and after unfolding the first fold the figure will look like as,

then after unfolding the last fold the transparent sheet will look like as given in option d.

i.e.

103. (a) In each row, the number of objects increases by 1 at each step from left to right. So, in third row, the missing segment contain $2 + 1 = 3$ dots.
104. (b) One of the three dots occupies the region which is common to the circle, rectangle and triangle; another dot occupies the region which is common to the triangle, circle, rectangle and square and the third dot occupies the region which is common to the circle, rectangle and square. These three characteristics as shown by these three dots are found in figure b.. It possesses region which is common to the circle, rectangle and triangle, a region which is common to the triangle circle, rectangle, and square and a region which is common to the circle, rectangle and square

105. (a) Naming the figure,

Clearly, there are 28 triangles in the given figure namely, EOF, AOE, AOB, BOF, ABF, BEF, ABE, AEF, BPF, FPG, CPG, BPC, BFG, BCG, CFG, BCF, GQC, CDQ, DQH, GQH, GDC, GDH, GHC, CDH, AFC, BGD, EBG and FCH.

Mathematics

106. (d) Given, $a = 3b$

$$e = \sqrt{1 - \frac{b^2}{a^2}} \Rightarrow e = \sqrt{1 - \frac{b^2}{9b^2}}$$

$$\Rightarrow e = \sqrt{1 - \frac{1}{9}} = \frac{\sqrt{8}}{3} = \frac{2\sqrt{2}}{3}$$

107. (a) We have, $\sum_{m=1}^n \tan^{-1} \left(\frac{2m}{m^4 + m^2 + 2} \right)$
- $$= \sum_{m=1}^n \tan^{-1} \left(\frac{(m^2 + m + 1) - (m^2 - m + 1)}{1 + (m^2 + m + 1)(m^2 - m + 1)} \right)$$
- $$= \sum_{m=1}^n [\tan^{-1}(m^2 + m + 1) - \tan^{-1}(m^2 - m + 1)]$$
- $$= (\tan^{-1} 3 - \tan^{-1} 1) + (\tan^{-1} 7 - \tan^{-1} 3)$$
- $$+ (\tan^{-1}(13) - \tan^{-1} 7) + \dots + (\tan^{-1}(n^2 + n + 1) - \tan^{-1}(n^2 - n + 1))$$

$$= \tan^{-1}(n^2 + n + 1) - \tan^{-1} 1$$

$$= \tan^{-1} \left(\frac{n^2 + n + 1 - 1}{1 + (n^2 + n + 1)} \right) = \tan^{-1} \left(\frac{n^2 + n}{n^2 + n + 2} \right)$$

108. (b) Given, $(2x^2 + 3x + 4)^{10} = \sum_{r=0}^{20} a_r x^r$

Replacing x by $\frac{2}{x}$, we get

$$\left(\frac{8}{x^2} + \frac{6}{x} + 4 \right)^{10} = \sum_{r=0}^{20} a_r \left(\frac{2}{x} \right)^r$$

$$\Rightarrow 2^{10} (2x^2 + 3x + 4)^{10} = \sum_{r=0}^{20} a_r 2^r x^{20-r}$$

$$\Rightarrow 2^{10} \sum_{r=0}^{20} a_r x^r = \sum_{r=0}^{20} a_r 2^r x^{20-r}$$

Comparing coefficient of x^8 both sides, we get

$$2^{10} a_8 = a_{12} 2^{12} \Rightarrow \frac{a_8}{a_{12}} = \frac{2^{12}}{2^{10}} = 4$$

109. (d) In $\triangle ABC$, D be the mid-point of BC and $AB = AD$. $\triangle ABD$ is an isosceles.

$\therefore AM$ is perpendicular bisector of BD

$$BM = MD$$

In $\triangle ABM$, $\tan B = \frac{AM}{BM}$

In $\triangle AMC$, $\tan C = \frac{AM}{CM}$

$$\therefore \frac{\tan B}{\tan C} = \frac{CM}{BM} = \frac{3BM}{BM} = 3 \quad [\because CM = DM + CD]$$

110. (a) We have,

$$L = \lim_{n \rightarrow \infty} \sqrt{n} \int_0^1 \frac{dx}{(1+x^2)^n}$$

We know that, $(1+x^2)^n > 1+nx^2$

$$\Rightarrow \frac{1}{(1+x^2)^n} < \frac{1}{1+nx^2}$$

$$\Rightarrow \int_0^1 \frac{dx}{(1+x^2)^n} < \int_0^1 \frac{1}{1+nx^2} dx$$

$$\Rightarrow \int_0^1 \frac{1}{(1+x^2)^n} < \frac{1}{\sqrt{n}} [\tan^{-1} \sqrt{n} x]_0^1$$

$$= \frac{1}{\sqrt{n}} \tan^{-1} \sqrt{n}$$

$$L = \lim_{n \rightarrow \infty} \sqrt{n} \int_0^1 \frac{1}{(1+x^2)^n} dx < \lim_{n \rightarrow \infty} \sqrt{n} \frac{1}{\sqrt{n}} \tan^{-1} \sqrt{n}$$

$$\therefore L = \frac{\pi}{2}$$

111. (d) We have, $\sqrt{x+3-4\sqrt{x-1}} + \sqrt{x+8-6\sqrt{x-1}} = 1$

$$\sqrt{(\sqrt{x-1})^2 - 2 \times 2\sqrt{x-1} + 4} + \sqrt{(\sqrt{x-1})^2 - 2 \times 3\sqrt{x-1} + 9} = 1$$

$$\Rightarrow \sqrt{(\sqrt{x-1}-2)^2} + \sqrt{(\sqrt{x-1}-3)^2} = 1$$

$$\Rightarrow |\sqrt{x-1}-2| + |\sqrt{x-1}-3| = 1$$

$$\Rightarrow |\sqrt{x-1}-2| + |\sqrt{x-1}-3| = 1$$

$$= (\sqrt{x-1}-2) - (\sqrt{x-1}-3)$$

We know that,

If $|x-a| + |x-b| = (x-a) - (x-b)$

then, $(x-a)(x-b) < 0$

$$\therefore (\sqrt{x-1}-2)(\sqrt{x-1}-3) < 0$$

$$\Rightarrow 2 < \sqrt{x-1} < 3 \Rightarrow 5 < x < 10$$

$\therefore$ Equation have infinite many solutions.

112. (d) We have,

$$ax + y + z = a \quad \dots (i)$$

$$x + by + z = b \quad \dots (ii)$$

$$x + y + cz = c \quad \dots (iii)$$

are inconsistent.

$$\therefore \begin{vmatrix} a & 1 & 1 \\ 1 & b & 1 \\ 1 & 1 & c \end{vmatrix} = 0 \text{ and } \begin{vmatrix} a & 1 & 1 \\ b & b & 1 \\ c & 1 & c \end{vmatrix} \neq 0$$

$$\Rightarrow \begin{vmatrix} a & 1 & 1 \\ 1 & b & 1 \\ 1 & 1 & c \end{vmatrix} = 0$$

$$\Rightarrow a(bc-1) - 1(c-1) + 1(1-b) = 0$$

$$abc - a - c + 1 + 1 - b = 0$$

$$abc - a - b - c + 2 = 0$$

and

$$\begin{vmatrix} a & 1 & 1 \\ b & b & 1 \\ c & 1 & c \end{vmatrix} \neq 0$$

It is possible only when $a \neq 1, b \neq 1$ and $c \neq 1$

113. (a) For atleast 4 times an even number, probability is

$$= {}^7C_4 \left(\frac{1}{2}\right)^4 \left(\frac{1}{2}\right)^3 + {}^4C_5 \left(\frac{1}{2}\right)^5 \left(\frac{1}{2}\right)^2 + {}^7C_6 \left(\frac{1}{2}\right)^6 \left(\frac{1}{2}\right)^1 + {}^7C_7 \left(\frac{1}{2}\right)^7$$

$$= \frac{1}{2}$$

114. (b) Equation of plane containing line $x - y - 1 = 0$ and

$$z - 1 = 0 \text{ is } (x - y - 1) + \lambda(z - 1) = 0$$

$$\Rightarrow x - y + \lambda z - 1 - \lambda = 0 \quad \dots (i)$$

Since, this plane is parallel to line

$$\frac{x}{2} - \frac{z}{3} = 1 \text{ and } y = 3$$

$$\frac{x-1}{2} = \frac{y-3}{0} = \frac{z}{3} \quad \dots (ii)$$

$$\therefore 2(1) + (0)(-1) + 3(\lambda) = 0$$

$$\Rightarrow \lambda = -2/3$$

Putting the value of λ in Eq. (i), we get

$$x - y - \frac{2}{3}z - 1 + \frac{2}{3} = 0; 3x - 3y - 2z = 1$$

115. (d) We have, $(1+x+x^2)^{20} = \sum_{r=0}^{40} a_r x^r$

x is replaced by $-\frac{1}{x}$, we get

$$\left(1 - \frac{1}{x} + \frac{1}{x^2}\right)^{20} = \sum_{r=0}^{40} (-1)^r a_r \left(\frac{1}{x}\right)^r$$

$$(1-x+x^2)^{20} = \sum_{r=0}^{40} (-1)^r a_r x^{40-r}$$

$\sum_{r=0}^{39} (-1)^r a_r \cdot a_{r+1}$ is coefficient of x in product of

$$(1+x+x^2)^{20} \left(1 - \frac{1}{x} + \frac{1}{x^2}\right)^{20} = 0$$

116. (a) Let

$$L = \lim_{x \rightarrow \frac{3\pi}{4}} \frac{4 \sin^2 x \cos x - \cos x + \sin x}{\sin x + \cos x}$$

$$L = \lim_{x \rightarrow \frac{3\pi}{4}} \frac{2 \sin x (\sin^2 x + \cos^2 x + 2 \sin x \cos x - 1) - \cos x + \sin x}{\sin x + \cos x}$$

$$L = \lim_{x \rightarrow \frac{3\pi}{4}} \frac{2 \sin x [(\sin x + \cos x)^2 - 1] - \cos x + \sin x}{\sin x + \cos x}$$

$$L = \lim_{x \rightarrow \frac{3\pi}{4}} \frac{2 \sin x (\sin x + \cos x)^2 - 2 \sin x - \cos x + \sin x}{\sin x + \cos x}$$

$$L = \lim_{x \rightarrow \frac{3\pi}{4}} \frac{(\sin x + \cos x) (2 \sin x (\sin x + \cos x) - 1)}{\sin x + \cos x}$$

$$L = \lim_{x \rightarrow \frac{3\pi}{4}} 2 \sin x (\sin x + \cos x) - 1 = -1$$

117. (b) Given,

$$\mathbf{a} \times \mathbf{b} = \mathbf{c}$$

$$\mathbf{b} \times \mathbf{c} = \mathbf{a}$$

$$\mathbf{c} \times \mathbf{a} = \mathbf{b}$$

$$(\mathbf{b} \times \mathbf{c}) \cdot \mathbf{a} = \mathbf{a} \cdot \mathbf{a}$$

$$(\mathbf{c} \times \mathbf{a}) \cdot \mathbf{b} = \mathbf{b} \cdot \mathbf{b}$$

$$\mathbf{a}^2 - \mathbf{b}^2 = (\mathbf{b} \times \mathbf{c}) \cdot \mathbf{a} - (\mathbf{c} \times \mathbf{a}) \cdot \mathbf{b}$$

$$= [\mathbf{b} \mathbf{c} \mathbf{a}] - [\mathbf{c} \mathbf{a} \mathbf{b}] = 0$$

$$\therefore |\mathbf{a}|^2 - |\mathbf{b}|^2 = 0$$

$$|\mathbf{a}| = |\mathbf{b}|$$

We know that,

$$|\mathbf{a} \times \mathbf{b}|^2 = |\mathbf{a}|^2 |\mathbf{b}|^2 \sin^2 \theta$$

$$|\mathbf{a} \mathbf{b} \mathbf{c}| = |\mathbf{a}| |\mathbf{b}| |\mathbf{c}| \sin \theta$$

$$|\mathbf{a} \mathbf{b} \mathbf{c}| [-|\mathbf{a} \mathbf{b} \mathbf{c}| - 1] = 0$$

$$|\mathbf{a} \mathbf{b} \mathbf{c}| = 1$$

$$|\mathbf{a}| |\mathbf{b}| |\mathbf{c}| = 1$$

$$\therefore |\mathbf{a}| = |\mathbf{b}| = |\mathbf{c}| \neq 2$$

118. (a) Let

$$z = x + iy$$

$$\arg z = \tan^{-1} \left(\frac{y}{x} \right)$$

$$\arg(z) = \frac{\pi}{6}$$

$$\therefore \tan^{-1} \frac{y}{x} = \frac{\pi}{6}$$

$$\frac{y}{x} = \tan \frac{\pi}{6} = \frac{1}{\sqrt{3}}$$

$$\Rightarrow x = \sqrt{3} y$$

Also given,

$$|z - 2\sqrt{3}i| = \lambda$$

$$|x + iy - 2\sqrt{3}i| = \lambda$$

$$x^2 + (y - 2\sqrt{3})^2 = \lambda^2$$

This is the equation of circle whose centre is $(0, 2\sqrt{3})$ and $r = \lambda$. Now, $x - \sqrt{3}y = 0$ touches the circle

$$\therefore \lambda = \left| \frac{0 - \sqrt{3}(2\sqrt{3})}{\sqrt{1+3}} \right|$$

$$\lambda = \left| \frac{6}{2} \right| = 3$$

$$\therefore \lambda = 3$$

119. (a) We have,

$$l + m + n = 0 \quad \dots(i)$$

$$\text{and} \quad l^2 = m^2 + n^2 \quad \dots(ii)$$

Putting the value of l in Eq. (ii), we get

$$(m+n)^2 = m^2 + n^2$$

$$\Rightarrow m^2 + n^2 + 2mn = m^2 + n^2$$

$$\Rightarrow mn = 0$$

$$\Rightarrow m = 0, n = 0$$

$$\text{when} \quad m = 0, l = -n$$

$$\therefore \text{Direction cosines are} \left(-\frac{1}{\sqrt{2}}, 0, \frac{1}{\sqrt{2}} \right).$$

$$\text{When} \quad n = 0, l = -m$$

$$\therefore \text{Direction cosines are} \left(-\frac{1}{\sqrt{2}}, \frac{1}{\sqrt{2}}, 0 \right).$$

Angle between lines are

$$\cos \theta = \left(\frac{-1}{\sqrt{2}} \times -\frac{1}{\sqrt{2}} \right) + \left(0 \times \frac{1}{\sqrt{2}} \right) + \left(\frac{1}{\sqrt{2}} \times 0 \right)$$

$$\cos \theta = \frac{1}{2}, \theta = \pi/3$$

120. (c) Let the foot of perpendicular be (h, k) .

Equation of tangent with slope m passing (h, k) is

$$y = mx \pm \sqrt{6m^2 + 2}, \text{ where } m = -h/k$$

$$\Rightarrow \sqrt{\frac{6h^2}{k^2} + 2} = \frac{h^2 + k^2}{k}$$

$$6h^2 + 2k^2 = (h^2 + k^2)^2$$

$$\text{So, required locus is } 6x^2 + 2y^2 = (x^2 + y^2)^2.$$

121. (d) Let

$$h(x) = f(x) - 2g(x)$$

$$h(0) = f(0) - 2g(0)$$

$$h(0) = 2 - 2(0) \quad [\because f(0) = 2, g(0) = 0]$$

$$h(0) = 2$$

$$h(1) = f(1) - 2g(1)$$

$$h(1) = 6 - 2(2) \quad [\because f(1) = 6, g(1) = 2]$$

$$h(1) = 2$$

$$h(0) = h(1)$$

$$h'(x) = f'(x) - 2g'(x)$$

By Rolle's theorem $h'(c) = 0$

$$\therefore f'(c) - 2g'(c) = 0, f'(c) = 2g'(c)$$

122. (b) We have,

$$I = \int \left(1 + x - \frac{1}{x}\right) e^{x + \frac{1}{x}} dx$$

$$I = \int e^{x + \frac{1}{x}} dx + \int \left(x - \frac{1}{x}\right) e^{x + \frac{1}{x}} dx$$

$$I = \int e^{x + \frac{1}{x}} dx + \int x \left(1 - \frac{1}{x^2}\right) e^{x + \frac{1}{x}} dx$$

$$I = \int e^{x + \frac{1}{x}} dx + x e^{x + \frac{1}{x}} - \int e^{x + \frac{1}{x}} dx$$

$$I = x e^{x + \frac{1}{x}} + C$$

123. (d) We have,

$$(1 + ax + bx^2)(1 - 2x)^{18}$$

$$(1 + ax + bx^2)(1 - {}^{18}C_1 2x + {}^{18}C_2 (2x^2) - {}^{18}C_3 (2x)^3 + {}^{18}C_4 (2x)^4 \dots)$$

$$\text{Coefficient of } x^3 \text{ is } -{}^{18}C_3 (2)^3 + a \cdot {}^{18}C_2 (2)^2 - b {}^{18}C_1 (2)$$

$$\text{and coefficient of } x^4 \text{ is } {}^{18}C_4 (2)^4 - {}^{18}C_3 (2)^3 a + {}^{18}C_2 (2)^2 b$$

Coefficient of x^3 and x^4 are zero.

$$\therefore -{}^{18}C_3 (2)^3 + {}^{18}C_2 (2)^2 (a) - {}^{18}C_1 (2) b = 0$$

$$\Rightarrow \frac{4 \times 17 \times 16}{3 \times 2} - 17a + b = 0 \quad \dots (i)$$

$$\text{and } 80 - \frac{32}{3}a + b = 0 \quad \dots (ii)$$

Solving Eqs. (i) and (ii), we get

$$a = 16, b = \frac{272}{3}$$

124. (a) Equation of plane parallel to the plane

$$x - 2y + 2z - 5 = 0 \text{ is } x - 2y + 2z + \lambda = 0.$$

Since, this plane is unit distance from origin

$$\therefore 1 = \left| \frac{\lambda}{\sqrt{1 + 4 + 4}} \right|$$

$$|\lambda| = 3 \Rightarrow \lambda = \pm 3$$

$\therefore$ Equation of plane is

$$x - 2y + 2z = 3$$

125. (b) Let A be the event that maximum is 6.

B be the event that minimum is 3.

$$P(A) = \frac{{}^5C_2}{{}^8C_3} \text{ (number less than 6 is 5)}$$

$$P(B) = \frac{{}^5C_2}{{}^8C_3} \text{ (number greater than 3 is 5)}$$

$$P(A \cap B) = \frac{{}^2C_1}{{}^8C_3}$$

$\therefore$ Required probability

$$= P(B/A) = \frac{P(A \cap B)}{P(A)} = \frac{{}^2C_1}{{}^5C_2} = \frac{2}{10} = \frac{1}{5}$$

126. (b) We have, $\frac{\sin(\lambda\alpha)}{\sin \alpha} - \frac{\cos(\lambda\alpha)}{\cos \alpha} = \lambda - 1$

$$\sin(\lambda\alpha) \cos \alpha - \cos(\lambda\alpha) \sin \alpha = (\lambda - 1) \sin \alpha \cos \alpha$$

$$\sin(\lambda - 1)\alpha = (\lambda - 1) \sin \alpha \cos \alpha$$

$$\sin(\lambda - 1)\alpha = \frac{\lambda - 1}{2} \sin 2\alpha$$

It is possible, when $\lambda - 1 = 0 \Rightarrow \lambda = 1$

$$\text{and } \frac{\lambda - 1}{2} = 1 \Rightarrow \lambda = 3$$

$\therefore \lambda$ has only two solution.

127. (b) Given, $y = ax^2 + bx + c$ has two x-intercepts one is positive and one is negative and vertex is $(2, -2)$. The graph of $y = ax^2 + bx + c$ is

Clearly from graph

$$c > 0$$

$$-\frac{b}{a} > 0 \Rightarrow -b > 0$$

$$\Rightarrow b < 0$$

$$f(1) = a + b + c < 0$$

$$ab < 0, ac < 0, bc > 0$$

128. (b) Let $A = (1, 2)$ equation of line is

$$\frac{x-1}{\cos \theta} = \frac{y-2}{\sin \theta} = r = \frac{\sqrt{6}}{3}$$

$$\therefore x = \frac{\sqrt{6}}{3} \cos \theta + 1, y = \frac{\sqrt{6}}{3} \sin \theta + 2$$

This point lies on line $x + y = 4$

$$\therefore \frac{\sqrt{6}}{3} \cos \theta + \frac{\sqrt{6}}{3} \sin \theta = 1$$

$$\Rightarrow \sin \theta + \cos \theta = \frac{\sqrt{3}}{\sqrt{2}}$$

$$\Rightarrow \sin \left(\frac{\pi}{4} + \theta \right) = \frac{\sqrt{3}}{2}$$

$$\Rightarrow \frac{\pi}{4} + \theta = 60^\circ \text{ or } 120^\circ$$

$$\Rightarrow \theta = 15^\circ \text{ or } 75^\circ$$

$$\therefore \text{Larger angle} = 75^\circ.$$

129. (d) $[P + 1] = [P] + 1$, Let $[P] = n$, then n is integer

$\therefore ([P + 1], [P]) = (n + 1, n)$ lie inside the region of circles

$$S_1 = x^2 + y^2 - 2x - 15 = 0, C_1 = (1, 0), r_1 = 4$$

$$\text{and } S_2 = x^2 + y^2 - 2x - 7 = 0, C_2 = (1, 0), r_2 = 2\sqrt{2}$$

Both circles are concentric.

$$\therefore (n + 1)^2 + n^2 - 2(n + 1) - 7 > 0$$

$$\text{and } (n + 1)^2 + n^2 - 2(n + 1) - 15 < 0 \Rightarrow 4 < n^2 < 8$$

Which is not possible for any integer.

130. (a) We have,

$$\frac{dy}{dx} = e^{x-y}(e^x - e^y)$$

$$\Rightarrow e^y \frac{dy}{dx} + e^y e^x = e^{2x}$$

$$\text{Put } e^y = v$$

$$\therefore e^y \frac{dy}{dx} = \frac{dv}{dx}$$

$$\therefore \frac{dv}{dx} + ve^x = e^{2x}$$

This is linear equation

$$\text{I.F} = e^{\int e^x dx} = e^{e^x}$$

$\therefore$ Required solution is

$$v \cdot e^{e^x} = \int e^{e^x} \cdot e^{2x} dx + C$$

$$v \cdot e^{e^x} = e^{e^x} (e^x - 1) + C$$

$$\Rightarrow e^y \cdot e^{e^x} = e^{e^x} (e^x - 1) + C$$

$$\Rightarrow e^y = e^x - 1 + ce^{-e^x}$$

131. (d) Given, curve is $(y - x)^2 = x^3$

$$\Rightarrow y - x = \pm x\sqrt{x}$$

$$\Rightarrow y = x \pm x\sqrt{x}$$

$$\therefore \text{Area bounded} = \left| \int_0^1 \{(x + x\sqrt{x}) - (x - x\sqrt{x})\} dx \right|$$

$$= \left| 2 \int_0^1 x^{3/2} dx \right| = \frac{4}{5} \text{ sq unit}$$

132. (d) We have, $f(x) = \int_0^x (3 \sin x + 4 \cos x) dx$

$$\Rightarrow f'(x) = 3 \sin x + 4 \cos x = 5 \sin \left(x + \tan^{-1} \frac{4}{3} \right)$$

$$\frac{5\pi}{4} < x < \frac{4\pi}{3}$$

$$\Rightarrow \pi < x + \tan^{-1} 4/3 < 2\pi$$

$\therefore f'(x) < 0$, i.e. $f(x)$ is decreasing.

$$\therefore \text{least value of } f(x) \text{ is } \left(\frac{5\pi}{4}, \frac{4\pi}{3} \right) = f \left(\frac{4\pi}{3} \right)$$

$$\text{least } f(x) = \int_0^{4\pi/3} (3 \sin x + 4 \cos x) dx$$

$$= [-3 \cos x + 4 \sin x]_0^{4\pi/3}$$

$$= -3 \left(-\frac{1}{2} - 1 \right) + 4 \left(-\frac{\sqrt{3}}{2} \right)$$

$$= \frac{9 - 4\sqrt{3}}{2}$$

133. (a) Let $z_1 = re^{i\theta}$

$$\text{then, } \bar{z}_1 = re^{-i\theta}$$

$$\frac{z_1}{\bar{z}_1} = e^{2i\theta} = e^{2\pi i/n}$$

$$\Rightarrow \theta = \frac{\pi}{n}$$

$$\text{Also, } \frac{I_m(z_1)}{R_e(z_1)} = \tan \theta = \tan \frac{\pi}{n} = \sqrt{2} - 1$$

$$\Rightarrow \tan \frac{\pi}{8} = \sqrt{2} - 1$$

$$\therefore n = 8$$

134. (b) $(1 + x + x^3 + x^4)^{10} = [(1 + x)(1 + x^3)]^{10}$

$$= (1 + x)^{10} (1 + x^3)^{10}$$

$$= (1 + {}^{10}C_1 x + {}^{10}C_2 x^2 + {}^{10}C_3 x^3 + {}^{10}C_4 x^4 \dots)$$

$$\times (1 + {}^{10}C_1 x^3 + {}^{10}C_2 x^6 + \dots)$$

$$\therefore \text{Coefficient of } x^4 = ({}^{10}C_1)({}^{10}C_1) + {}^{10}C_4$$

$$= 100 + 210 = 310$$

135. (c) Since only one letter can not be in wrong envelope so that at least two letters are in wrong envelope means all the letters are not in right envelopes.

$$\therefore x = 6! - 1 = 720 - 1 = 719$$

Y = number of ways, so that all the letters are in wrong envelopes

$$= 6! \left(1 - \frac{1}{1!} + \frac{1}{2!} - \frac{1}{3!} + \frac{1}{4!} - \frac{1}{5!} + \frac{1}{6!} \right)$$

$$= 360 - 120 + 30 - 6 + 1 = 265$$

$$\therefore x - y = 719 - 265 = 454$$

136. (c) We have, $x = \log_5 3 + \log_7 5 + \log_9 7$

AM $\geq$ GM

$$\therefore \frac{\log_5 3 + \log_7 5 + \log_9 7}{3}$$

$$\geq (\log_5 3 \cdot \log_7 5 \cdot \log_9 7)^{1/3}$$

$$\Rightarrow x \geq 3 \left(\frac{\log 3}{\log 5} \times \frac{\log 5}{\log 7} \times \frac{\log 7}{\log 9} \right)^{1/3}$$

$$\Rightarrow x > 3 \left(\frac{1}{2} \right)^{1/3} \Rightarrow x > \frac{3}{\sqrt[3]{2}}$$

137. (c) $x^2 - 2x + A = 0$

$$\Rightarrow x = 1 \pm \sqrt{1 - A}$$

$$\therefore p = 1 - \sqrt{1 - A}, q = 1 + \sqrt{1 - A}$$

$$\text{Similarly, } r = 9 - \sqrt{81 - B}, s = 9 + \sqrt{81 - B}$$

p, q, r, s are in AP.

$$\therefore q - p = s - r$$

$$\Rightarrow 2\sqrt{1 - A} = 2\sqrt{81 - B}$$

$$\Rightarrow B = 80 + A$$

$$\text{and } q - p = r - q$$

$$\Rightarrow 3\sqrt{1 - A} = 8 - \sqrt{81 - B}$$

$$\Rightarrow A = -3, B = 77$$

138. (c) We have,

$$(1 - a)x + y + z = 0$$

$$x + (1 - b)y + z = 0$$

$$x + y + (1 - c)z = 0$$

has many solutions

$$\therefore \begin{vmatrix} 1-a & 1 & 1 \\ 1 & 1-b & 1 \\ 1 & 1 & 1-c \end{vmatrix} = 0$$

$$\Rightarrow ab + ac + bc = abc$$

$$\therefore \frac{ab + bc + ac}{3} \geq (a^2 b^2 c^2)^{1/3} = (abc)^{1/3} \geq 3$$

$$\therefore \text{Minimum of } abc = (3)^3 = 27$$

139. (c) Given,

$$AA' = A' A$$

and

$$B = A^{-1} A'$$

$$BB' = (A^{-1} A')(A^{-1} A')'$$

$$= (A^{-1} A')[(A')'(A^{-1})']$$

$$= (A^{-1} A')[A(A')^{-1}]$$

$$[\because (A')' = A, (A^{-1})' = (A')^{-1}]$$

$$= A^{-1}(A' A)(A')^{-1}$$

$$= A^{-1}(AA')(A')^{-1}$$

$$= (A^{-1} A)(A^{-1} A)'$$

$$= I \cdot I = I$$

140. (a) We have,

$$\sin^{-1} x + \tan^{-1} x = \frac{\pi}{2} \Rightarrow 0 < x < 1$$

$$\therefore \tan^{-1} x = \frac{\pi}{2} - \sin^{-1} x = \cos^{-1} x$$

$$\Rightarrow \tan^{-1} x = \tan^{-1} \left(\frac{\sqrt{1-x^2}}{x} \right)$$

$$\Rightarrow x^2 = \sqrt{1-x^2}$$

$$\Rightarrow x^4 + x^2 - 1 = 0 \Rightarrow x^2 = \frac{-1 \pm \sqrt{5}}{2}$$

$$\Rightarrow x^2 > 0$$

$$\therefore x^2 = \frac{\sqrt{5} - 1}{2}$$

$$\Rightarrow 2x^2 + 1 = \sqrt{5}$$

141. (a) Given, $|\cos x| = 2[x]$

$$0 \leq |\cos x| \leq 1$$

$$\therefore 0 \leq 2[x] \leq 1$$

$$0 \leq [x] \leq \frac{1}{2}$$

$$x = 0$$

$$\therefore |\cos x| = 0$$

$$x : n\pi + \frac{\pi}{2}$$

For any value of $n \in N, [n] \neq 0$

Hence, the equation has no solution.

142. (c) $0 \leq \alpha, \beta \leq \frac{\pi}{4}; \alpha + \beta \leq \frac{\pi}{2}$

$\cos(\alpha + \beta) = 4/5 \Rightarrow \tan(\alpha + \beta) = 3/4$

$\sin(\alpha - \beta) = 5/13 \Rightarrow \alpha - \beta \in \theta_1$

and $\tan(\alpha - \beta) = 5/12$

$$\begin{aligned} \tan 2\alpha &= \tan(\alpha + \beta + \alpha - \beta) \\ &= \frac{\tan(\alpha + \beta) + \tan(\alpha - \beta)}{1 - \tan(\alpha + \beta) \tan(\alpha - \beta)} \\ &= \frac{3/4 + 5/12}{1 - 3/4 \times \frac{5}{12}} = \frac{56}{33} \end{aligned}$$

143. (c) 18 draws are required for 2 aces means in the first 17 draws, there is one ace and 16 non-ace and 18th draw 2nd ace.

$\therefore$ Required probability $= \frac{{}^{48}C_{16} \times {}^4C_1}{{}^{52}C_{17}} \times \frac{3}{35} = \frac{561}{15925}$

144. (c) $(\mathbf{a} + p\mathbf{b})$ is normal to $\mathbf{c}$

$$\begin{aligned} \therefore (\mathbf{a} + p\mathbf{b}) \cdot \mathbf{c} &= 0 \\ ((1-p)\hat{\mathbf{i}} + (2+2p)\hat{\mathbf{j}} + (3+p)\hat{\mathbf{k}}) \cdot (3\hat{\mathbf{i}} + \hat{\mathbf{j}}) &= 0 \\ 3-3p+2+2p &= 0 \Rightarrow p=5 \end{aligned}$$

145. (b) We have,

$$\begin{aligned} f(x) &= x[x] \\ f(x) &= px \quad [\because [x] = p] \\ f'(x) &= p = [x] \\ \therefore f'(x) &= [x] \end{aligned}$$

146. (b) We have,

$$\begin{aligned} f(x) &= x^2 e^{-x^2} \\ f'(x) &= 2xe^{-x^2} - 2x^3 e^{-x^2} \\ f'(x) &= 2xe^{-x^2}(1-x^2) \\ f'(x) &= 0, x=0, -1, 1 \end{aligned}$$

$f'(-h) < 0, f'(h) > 0$, So minimum at $x=0$

$f'(1-h) > 0, f'(1+h) < 0$, So maximum at $x=1$

$f'(-1-h) > 0, f'(-1+h) < 0$, So maximum at $x=-1$

Minimum $f(x) = f(0) = 0$

Maximum $f(x) = e^{-1} = \frac{1}{e}$

Since, $f(x) \geq 0 \forall x$

So, difference between maximum and minimum values $= \frac{1}{e} - 0 = \frac{1}{e}$

147. (a) Given,

$f'(x) = f(x) + \int_0^1 f(x) dx, f(0) = 1 \quad \dots(i)$

$\Rightarrow f''(x) = f'(x) + 0$

$\Rightarrow \frac{f''(x)}{f'(x)} = 1$

$\Rightarrow \int \frac{f''(x)}{f'(x)} dx = \int dx$

$\Rightarrow \log f'(x) = x + C$

$\Rightarrow f'(x) = Ae^x$

$\Rightarrow f(x) = Ae^x + K$

$f(0) = A + K = 1 \quad \dots(ii)$

$\therefore Ae^x = Ae^x + K + \int_0^1 (Ae^x + k) dx$

$\Rightarrow k + [Ae^x + Kx]_0^1 = 0$

$\Rightarrow k + Ae - A + K = 0$

$\Rightarrow A(e-1) + 2k = 0 \quad \dots(iii)$

From Eqs. (ii) and (iii), we get

$A = \frac{2}{3-e}, k = \frac{1-e}{3-e}$

$\therefore f(x) = \frac{2e^x}{3-e} + \frac{1-e}{3-e}$

148. (b) We have,

$y = e^{2x} + x^2$

at $x=0, y=1$

$\frac{dy}{dx} = 2e^{2x} + 2x$

$\left(\frac{dy}{dx}\right)_{x=0} = 2$

$\therefore$ Equation of normal at $(0, 1)$ is

$y-1 = -\frac{1}{2}(x)$

$\Rightarrow x+2y-2=0$

$\therefore$ Distance from $(0, 0)$ from normal $= \frac{2}{\sqrt{5}}$

149. (c) Given line $\frac{x-1}{-1} = \frac{y-2}{3} = \frac{z-4}{1}$ is passes through

$P(1, 2, 4)$.

To find the reflection of line we need one more point on the line clearly $M(0, 5, 5)$ also lie on line.

Let $N(\alpha, \beta, \gamma)$ be the reflection M in the

$x+y+z=7$

$\therefore \frac{\alpha}{2} + \frac{\beta+5}{2} + \frac{\gamma+5}{2} + 7$

$\Rightarrow \alpha + \beta + \gamma = 4$

Also, MN is perpendicular, i.e. parallel to the normal of the plane

$$\therefore \frac{\alpha}{1} = \frac{\beta-5}{1} = \frac{\gamma-5}{1} = \lambda$$

$$\Rightarrow \alpha = \lambda, \beta = \lambda + 5, \gamma = \lambda - 5$$

$$\therefore \lambda + \lambda + 5 + \lambda + 5 = 4$$

$$\Rightarrow \lambda = -2$$

$$\therefore N = (-2, 3, 5)$$

$$\text{Equation } PN \text{ is } \frac{x-1}{-3} = \frac{y-2}{1} = \frac{z-4}{-1}$$

150. (b) We have,

$$x + y + z = 5$$

$$x^2 + y^2 + z^2 = 9$$

$$\Rightarrow x^2 + y^2 + (5 - x - y)^2 = 9$$

$$\Rightarrow y^2 + x^2 - 5x - 5y + xy + 8 = 0$$

$$\Rightarrow y^2 + y(x-5) + (x^2 - 5x + 8) = 0$$

$$\Rightarrow \text{Since } y \in R$$

$$(x-5)^2 - 4(x^2 - 5x + 8) \geq 0$$

$$\Rightarrow x^2 - 10x + 25 - 4x^2 + 20x - 32 \geq 0$$

$$\Rightarrow 3x^2 - 10x + 7 \leq 0$$

$$\Rightarrow 3x^2 - 7x - 3x + 7 \leq 0$$

$$\Rightarrow (3x-7)(x-1) \leq 0$$

$$\Rightarrow x \in \left[1, \frac{7}{3}\right]$$

$$\text{Length of interval} = \left(\frac{7}{3} - 1\right) = \frac{4}{3}$$

Solved Paper 2020

BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as given below.

Part I Physics	1-40
Part II Chemistry	41-80
Part III a. English Proficiency	81-95
b. Logical Reasoning	96-105
Part IV Mathematics	106-150
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

PART I

Physics

- Three solenoid coils of same dimensions, same number of turns and same number of layers of windings are taken. Coil 1 has inductance L_1 wound by Mn wire of resistance $6\Omega\text{m}^{-1}$, coil 2 with inductance L_2 wound by similar wire but in reverse direction in each layer. Coil 3 with inductance L_3 wound by a superconducting wire. The relation between their self inductances will be

a. $L_1 = L_2, L_3 = 0$	b. $L_1 = L_2 = L_3$
c. $L_1 = L_3, L_2 = 0$	d. $L_1 > L_2 > L_3$
- Three capacitors C_1, C_2 and C_3 are connected as shown in the figure below. If capacitor C_3 breaks down electrically, the change in total charge on the combination of capacitors is

- a. $(C_1 + C_2)V \left[1 - \left(\frac{C_3}{C_1 + C_2 + C_3} \right) \right]$
- b. $(C_3 + C_2) \left[1 - \left(\frac{C_1}{(C_1 + C_2 + C_3)} \right) \right]$

c. $(C_1 + C_2)V \left[1 - \left(\frac{C_2 + C_1}{C_1 + C_3} \right) \right]$

d. $(C_1 + C_2)V \left[1 - \left(\frac{C_2}{(C_1 + C_3)} \right) \right]$

- A black body radiates energy at the rate $E \text{ Wm}^{-2}$ at high temperature $T \text{ K}$. When the temperature is reduced to $\left(\frac{T}{4}\right) \text{ K}$, the new radiant energy is

a. $\frac{E}{256}$	b. $4E$	c. $\frac{E}{4}$	d. $\frac{E}{16}$
--------------------	---------	------------------	-------------------
- The length of the rectangle is $l = 15.2 \text{ cm}$ and breadth is $b = 2.9 \text{ cm}$ and the minimum possible measurement by scale = 0.1 cm . Then, the area of the rectangle is (Taking significant figures into consideration)

a. 44.08 cm^2	b. 24.8 cm^2
c. 44 cm^2	d. 94.008 cm^2
- In an adiabatic process, where pressure is decreased by $\frac{3}{4}\%$, if $\frac{C_p}{C_v} = \frac{4}{3}$, then the volume increases by

a. $\frac{3}{4}\%$	b. $\frac{9}{16}\%$
c. $\frac{16}{9}\%$	d. $\frac{4}{3}\%$

2 SELF STUDY GUIDE BITSAT

6. The vibrations of a string of length 60 cm fixed at both ends are represented by the equation

$$y = 4 \sin\left(\frac{\pi x}{15}\right) \cos(96\pi t)$$

where x and y are in cm and t is in second. Calculate the velocity of the particle at $x = 7.5$ cm at $t = 0.25$ s.

- a. 4 m/s
b. 0
c. 16 m/s
d. 9.8 m/s
7. A charge $+q$ is placed at the origin O of XY -axes as shown in the figure. The work done in taking a charge Q from A to B along the straight line AB is

- a. $\frac{qQ}{4\pi\epsilon_0} \left(\frac{a-b}{ab} \right)$
b. $\frac{qQ}{4\pi\epsilon_0} \left(\frac{b-a}{ab} \right)$
c. $\frac{qQ}{4\pi\epsilon_0} \left(\frac{b}{a^2} - \frac{1}{b} \right)$
d. $\frac{qQ}{4\pi\epsilon_0} \left(\frac{a}{b^2} - \frac{1}{b} \right)$
8. The hydrogen-like element that has a spectrum whose lines have wavelength four times shorter than those of atomic hydrogen is
a. Lithium
b. Helium
c. Berilliyum
d. Potassium
9. Two small conducting spheres of equal radius have charges $+20\mu\text{C}$ and $-40\mu\text{C}$ respectively and placed at a distance R from each other experience force F_1 . If they are brought in contact and separated to the same distance, they experience force F_2 . The ratio of F_1 to F_2 is
a. 1 : 4
b. +8 : 1
c. -8 : 1
d. 1 : 8
10. A Carnot engine has the same efficiency between 600 K to 300 K and 1600 K to x K, then the value of x is
a. 1600 K
b. 800 K
c. 819 K
d. 900 K

11. A ball of mass 0.5 kg is thrown up with initial speed 16 ms^{-1} and reaches maximum height of 9 m. How much energy is dissipated by air drag acting on the ball during the ascent?
a. 199 J
b. 19.9 J
c. 20.9 J
d. 9.9 J

12. In the circuit shown, if the 10Ω resistor is replaced by a resistor of 15Ω , then what is the amount of current drawn from the battery?

- a. 100 A
b. 10 A
c. 1 A
d. 2.4 A
13. A time dependent force $F = (8t)$ acts on a particle of mass 2 kg. If the particle starts from rest, the work done by the force during the first 1s will be
a. 0.4 J
b. 4 J
c. 19 J
d. 4.5 J
14. If L, R, C and V represent inductance, resistance, capacitance and potential difference respectively, then dimensions of $\frac{L}{RCV}$ are the same as those of
a. current
b. $\frac{1}{\text{current}}$
c. charge
d. $\frac{1}{\text{charge}}$
15. The magnetic field of a beam emerging from a fitter facing a flood light is given by
 $B = 10 \times 10^{-8} \sin(1 \times 10^7 z - 3.6 \times 10^{15} t)$ T. The average intensity of the beam is
a. 1.82 W/m^2
b. 1.19 W/m^2
c. 1.18 W/m^2
d. 1.17 W/m^2
16. From the velocity-time graph of a body moving in a straight line, the distance travelled and the average velocity in the time interval $t = 0$ to $t = 20$ s are, respectively,

- a. 0, 0
b. 120 m, 60 m
c. 60 m, 0
d. 0, 60 m
17. A thin equi-convex lens is made of glass of refractive index 1.5 and its focal length is 0.2 m. If it acts as a concave lens of focal length 0.5 cm when dipped in a liquid, the refractive index of the liquid is
a. $\frac{17}{8}$
b. $\frac{15}{8}$
c. $\frac{13}{8}$
d. $\frac{9}{8}$

18. A moving coil galvanometer has a resistance of $60\ \Omega$ and it indicates full deflection on passing a current of $4.5\ \text{mA}$. A voltmeter is made using this galvanometer and a $4.5\ \text{k}\Omega$ resistance. The maximum voltage, that can be measured using this voltmeter, will be close to
 a. $21\ \text{V}$ b. $20.5\ \text{V}$ c. $20\ \text{V}$ d. $19.5\ \text{V}$
19. The combination of the gates shown in following figure yields

- a. NAND gate b. OR gate
 c. NOT gate d. XOR gate
20. A vessel contains one mole of O_2 gas (molar mass 32) at a temperature T . The pressure of the gas is p . An identical vessel containing one mole of He gas (molar mass 4) at a temperature $2T$ has a pressure of
 a. $\frac{p}{8}$ b. p c. $2p$ d. $8p$
21. The acceleration of a particle in m/s^2 is given by $a = (3t^2 - 2t + 1)$, where t is in second. If the particle starts with a velocity $v = 1\ \text{m/s}$ at $t = 1\ \text{s}$, then velocity of the particle at the end of $4\ \text{s}$ is
 a. $40\ \text{m/s}$ b. $52\ \text{m/s}$ c. $48\ \text{m/s}$ d. $84\ \text{m/s}$
22. The figure shows graphs of pressure (p) versus density (d) for an ideal gas at two temperatures T_1 and T_2 , then

- a. $T_1 > T_2$ b. $T_1 < T_2$
 c. $T_1 = T_2$ d. None of these
23. Two spheres of the same material and same radii r are touching each other. The gravitational force between the spheres is proportional to
 a. $\frac{1}{r^2}$ b. r^2 c. $\frac{1}{r^4}$ d. r^4
24. A spherical lens of power $-4\ \text{D}$ is placed at a distance of $15\ \text{cm}$ from another spherical lens of power $5\ \text{D}$. A beam of parallel light falls on the first spherical lens. The final image formed is
 a. real and at a distance of $40\ \text{cm}$ from the lens of power $5\ \text{D}$

- b. real and at a distance of $10\ \text{cm}$ from the lens of power $-4\ \text{D}$.
 c. virtual and at a distance of $40\ \text{cm}$ from the lens of power $-5\ \text{D}$
 d. None of the above

25. The wheel of a car, accelerated uniformly from rest, rotates through 5 radians during the first second. The angle (in radians) rotated during the next second is
 a. 15 b. 7.5 c. 12.5 d. 20

26. Lights of two different frequencies whose photons have energies $1.5\ \text{eV}$ and $2.5\ \text{eV}$ respectively illuminate a metallic surface whose work function is $0.5\ \text{eV}$ successively. Ratio of maximum speeds of emitted electrons will be
 a. $3 : 2$ b. $2 : 3$
 c. $\sqrt{3} : \sqrt{2}$ d. $\sqrt{2} : \sqrt{3}$

27. When a body is dropped from a height h , then it hits the ground with a momentum p . If the same body is dropped from a height which is three times more than previous height, the percentage change in momentum when it hits the ground is
 a. 25% b. 50% c. 75% d. 100%
28. The reading of the ammeter for a germanium diode in the given circuit is

- a. $0.94\ \text{A}$ b. 0 c. $2.8\ \text{A}$ d. $5\ \text{A}$
29. The decay constants of two radioactive substances X and Y are 4λ and λ respectively. At $t = 0$, a sample has the same number of two nuclei. The time taken for the ratio of number of nuclei to become $\frac{1}{e^3}$ will be
 a. $\frac{1}{3\lambda}$ b. $\frac{1}{2\lambda}$ c. $\frac{2}{3\lambda}$ d. $\frac{3}{2\lambda}$
30. The magnitude of the force vector acting on a unit length of a thin wire carrying a current $I = 10\ \text{A}$ at a point O, if the wire is bent in the form of a semi-circle (shown below) with radius $R = 20\pi\ \text{cm}$, is
 a. $30\ \mu\text{N/m}$ b. $40\ \mu\text{N/m}$
 c. $50\ \mu\text{N/m}$ d. $60\ \mu\text{N/m}$
31. A long cylindrical iron core of cross-sectional area $5\ \text{cm}^2$ is inserted into a long solenoid having 4000 turns/meter and carrying a current $5\ \text{A}$. The magnetic field inside the core is $\pi\ \text{T}$. Find the pole strength developed.
 a. $1000\ \text{A-m}$ b. $1240\ \text{A-m}$
 c. $882\ \text{A-m}$ d. $760\ \text{A-m}$

4 SELF STUDY GUIDE BITSAT

32. A plane requires for take off a speed of 72 kmh^{-1} , the run on the ground being 50 m. The mass of the plane is 10000 kg and the coefficient of friction between the plane and the ground is 0.2. Assume that the plane accelerates uniformly during take off. The minimum force required by the engine of the plane for take off is

a. $4.43 \times 10^4 \text{ N}$ b. $5.96 \times 10^4 \text{ N}$
c. $2.25 \times 10^4 \text{ N}$ d. $3.45 \times 10^4 \text{ N}$

33. In a fluorescent lamp choke, 120 V of reverse voltage is produced when the choke current changes uniformly 0.50 A to 0.20 A in a duration of 0.030 ms. The self inductance of the choke (in mH) is estimated to be

a. 12 H b. $12 \times 10^{-3} \text{ mH}$
c. $12 \times 10^{-3} \text{ H}$ d. 0

34. A man grows into a giant such that his linear dimensions increase by a factor of 8. Assuming that his density remains same, the stress in his leg will change by a factor of

a. $\frac{1}{8}$ b. 8 c. 36 d. 64

35. When 2 moles of a monoatomic gas are mixed with 3 moles of a diatomic gas, the value of adiabatic exponent for the mixture is

a. $\frac{15}{16}$ b. $\frac{7}{5}$
c. $\frac{31}{21}$ d. $\frac{38}{59}$

36. A simple pendulum is placed inside a lift, the lift is moving with a uniform acceleration. If the time periods of the pendulum while the lift is moving upwards and downwards are in the ratio of 1 : 3, then the acceleration of the lift is

[Take acceleration due to gravity, $g = 10 \text{ m/s}^2$]
a. 4 m/s^2 b. 6 m/s^2
c. 8 m/s^2 d. 10 m/s^2

37. A satellite is moving around the earth with speed v in a circular orbit of radius r . If the orbit radius is decreased by 2%, its speed will increase by

a. 1% b. 2% c. 1.5% d. 1.414%

38. In the circuit shown in figure, the AC source has angular frequency $\omega = 2000 \text{ rad s}^{-1}$. The amplitude of the current will be nearest to

a. 2.85 A b. 3 A
c. 0.5 A d. 3.625 A

39. The work done by a force acting on a body is as shown in the following graph. The total work done in covering an initial distance of 40 m is

a. 500 J b. 600 J c. 400 J d. 800 J

40. A potentiometer wire, 10 m long, has a resistance of 40Ω . It is connected in series with a resistance box and a 4 V storage cell. If the potential gradient along the wire is 0.4 mVcm^{-1} , the resistance unplugged in the box is

a. 220Ω b. 360Ω
c. 760Ω d. 848.3Ω

PART II

Chemistry

41. In a set of reactions, *m*-bromobenzoic acid gives a product *D*. Identify the product *D*:

42. A volume of 50.00 mL of a weak acid of unknown concentration is titrated with 0.10 M solution of NaOH. The equivalence point is reached after 39.30 mL of NaOH solution has been added. At the half equivalence point (19.65 mL) the pH is 4.85. Thus, initial concentration of the acid and its pK_a values are

[HA]	pK_a
a. 0.1 M	4.85
b. 0.079 M	4.85
c. 0.1 M	3.70
d. 0.097 M	2.93

43. 1-phenyl-1, 3-dibromopropane on treatment with alc. KOH gives diastereomeric mixture in which compound (A) is major product. (A) gives the following reaction

Compound (C) and (D) are

- a.  and 
- b.  and 
- c.  and 
- d.  and 

44. Which of the following statement is incorrect?
- α -D-fructose and β -D-fructose are enantiomers of each other.
 - D-glyceraldehyde and L-glyceraldehyde are enantiomers of each other.
 - The reserve carbohydrate of animals is glycogen.
 - Aldohexoses which react with phenyl hydrazine to give identical osazones are C-2 epimers.
45. Which of the following is not a mixed pair of oxides?
- Mn_3O_4 and Co_3O_4
 - Co_3O_4 and Pb_3O_4
 - Pb_3O_4 and Mn_3O_4
 - Fe_3O_4 and Fe_2O_3
46. A solution of copper sulphate is electrolysed between copper electrodes by a current of 10.0A passing for one hour. Which of the following statements is correct regarding the changes occur at the electrodes and in the solution?
- 11.84 g of copper will deposit on the cathode
 - 11.84 g of copper will deposit on the anode
 - 11.84 g of copper will deposit on the anode as well as on the cathode
 - copper will not deposit on any of the electrode

Identify structure of compound (D).

- a.  b.  c.  d. 

48. Which of the following statement is correct?

- ΔS for $\frac{1}{2} Cl_2(g) \rightarrow Cl(g)$ is positive.
- $\Delta E < 0$ for combustion of $CH_4(g)$ in a sealed container with rigid adiabatic system.
- ΔG is always zero for a reversible process in a closed system.
- ΔG° for an ideal gas reaction is a function of pressure.

49. Which of the following statements on critical constants of gases are correct?

- Larger the T_c/p_c value of a gas, larger would be the included volume.
- Critical temperature (T_c) of a gas is greater than its Boyle temperature (T_B).
- At the critical point in the van der Waals' gas isotherm, $\left(\frac{\partial p}{\partial V_m}\right)_{T_c} = 0$

Select the correct answer using the codes given below.

- Both I and II
- Both I and III
- Both II and III
- I, II and III

50. In the given reaction,

Product (D) is

- a positional isomer of X
- identical to X
- chain isomer of X
- an oxidation product of X

51. $Na_2B_4O_7 + \text{conc. } H_2SO_4 + H_2O$

6 SELF STUDY GUIDE BITSAT

(B) is identified by the characteristic colour of the flame. (A) and (B) are respectively:

- a. H_3BO_3 and $\text{Na}_2\text{B}_4\text{O}_7$ b. $\text{B}(\text{OC}_2\text{H}_5)_3$ and H_3BO_3
c. NaBO_2 and H_3BO_3 d. H_3BO_3 and $\text{B}(\text{OC}_2\text{H}_5)_3$

52. How many mL of perhydrol is required to produce sufficient oxygen which can be used to completely convert 2 L of SO_2 gas?
a. 10 mL b. 5 mL
c. 20 mL d. 30 mL
53. At the top of a mountain the thermometer reads 0°C and the barometer reads 710 mm Hg. At the bottom of the mountain the temperature is 30°C and the pressure is 760 mm Hg. The ratio of the density of air at the top to that of the bottom is
a. 1 : 1.04 b. 0.4 : 1
c. 1.04 : 1 d. 1 : 0.4

54. Match the following columns :

Column I (Compound)	Column II (Structure)
A. ClF_3	1. Square planar
B. PCl_5	2. Tetrahedral
C. IF_5	3. Trigonal bipyramidal
D. CCl_4	4. Square pyramidal
E. XeF_4	5. T-shaped

Codes

A	B	C	D	E
a. 5	4	3	2	1
b. 5	3	4	2	1
c. 5	3	4	1	2
d. 4	3	5	2	1

55. Most acidic hydrogen is present in

56. The process of 'eutrophication' is due to the
a. increase in concentration of insecticide in H_2O .
b. increase in concentration of fluoride ion in H_2O
c. reduction in concentration of the dissolved oxygen in water due to phosphate pollution in water.
d. attack of younger leaves of a plant by peroxyacetyl nitrate
57. Ionisation energy of H-atom is 13.6 eV. The wavelengths of the spectral line emitted when an electron in Be^{3+} comes from 5th energy level to 2nd energy level is
a. 43.5 nm b. 4350 nm
c. 4.35 nm d. 435 nm

58. The enthalpies of combustion of carbon and carbon monoxide in excess of oxygen at 298 K and constant pressure are -393.5 kJ/mol and -280.0 kJ/mol respectively. The heat of formation of carbon monoxide at constant volume is
a. $+111.7 \text{ kJ/mol}$ b. -1111.7 kJ/mol
c. -111.7 kJ/mol d. -11.7 kJ/mol

59. If the quantum number l could have the value ' n ' also then, $\text{Sc}(21)$ would have electronic configuration as (other rules strictly followed)
a. $1s^2 1p^6 2s^2 2p^6 2d^3 3s^2$
b. $1s^2 1p^6 2s^2 2p^6 3s^2 2d^3$
c. $1s^2 2s^2 2p^6 3s^2 3p^6 3d^1 4s^2$
d. $1s^2 2s^2 2p^6 3s^2 3p^6 3d^3$

60. 1.1 mole of A mixed with 2.2 moles of B and the mixture is kept in a 1 L flask and the equilibrium, $A + 2B \rightleftharpoons 2C + D$ is reached. If at equilibrium 0.2 mole of C is formed then the value of K_c will be
a. 0.1 b. 0.01 c. 0.001 d. 1

61. Choose the correct chemical reaction among the following:
a. $\text{CaCN}_2 + \text{H}_2\text{O} \longrightarrow \text{Ca}(\text{OH})_2 + \text{C}_2\text{H}_2 + \text{NH}_3$
b. $2\text{NH}_3 + \text{CaSO}_4 + \text{CO}_2 + \text{H}_2\text{O} \longrightarrow \text{CaCN}_2 + (\text{NH}_4)_2\text{SO}_4$
c. $\text{CaCl}_2 + \text{Na}_2\text{SO}_4 \longrightarrow \text{CaSO}_4 + 2\text{NaCl}$
d. $\text{CaC}_2 + \text{H}_2\text{O} \longrightarrow \text{Ca}(\text{OH})_2 + 2\text{NaCl}$

62. Which of the following reactions represents disproportionation?
a. $\text{CrO}_5 \longrightarrow \text{Cr}^{3+} + \text{O}_2$
b. $\text{IO}_3^- + \text{I}^- + \text{H}^+ \longrightarrow \text{I}_2$
c. $\text{CrO}_2\text{Cl}_2 + \text{NaOH} \longrightarrow \text{Na}_2\text{CrO}_4 + \text{NaCl} + \text{H}_2\text{O}$
d. $\text{Na}_2\text{S}_2\text{O}_3 + \text{H}_2\text{SO}_4 \longrightarrow \text{Na}_2\text{SO}_4 + \text{SO}_2 + \text{S}_8 + \text{H}_2\text{O}$

- 63.

Compound C is

64. On the basis of Ellingham diagram, which of the following is not correct?
a. Entropy change for all metal oxides is roughly same.
b. Below the boiling point, $T\Delta S$ factor is same irrespective of metal.
c. Above $\Delta G = 0$ line, oxide decomposes into metal and oxygen.
d. If randomness increases the slope increases.

65. Which of the following is not explained by adsorption?
- When acetic acid solution is shaken with charcoal the concentration of acid decreases.
 - The white ppt. of $\text{Mg}(\text{OH})_2$ attains blue colour when precipitated in the presence of magneson reagent.
 - An aqueous solution of NaOH attains pink colour with a drop of phenolphthalein.
 - When animal charcoal is shaken with coloured methylene blue solution, the solution turns colourless.

66. Identify 'A' and 'B' in the following reaction

- Both A and B are 
- Both A and B are 
- A is  and B is 
- A is  and B is 

67. An element occurs in two crystalline forms α and β . The α -form has an fcc with $a = 3.68 \text{ \AA}$ and β form has a bcc with $a = 2.92 \text{ \AA}$. Calculate the ratio of their densities.
- 1 : 1
 - 1 : 2
 - 2 : 1
 - 2 : 3

68. The molar heat of vaporisation of water at 100°C is 40.585 kJ/mol . The temperature at which a solution containing 5.60 g of $\text{Al}_2(\text{SO}_4)_3$ per 1000 g of water boil is _____. (Assuming the degree of ionisation of salt to be 1).
- 1000.042°C
 - 10.0042°C
 - 100.042°C
 - 105°C

69. An organic base $\text{C}_8\text{H}_7\text{N}(X)$ reacts with nitrous acid at 0°C to give a clear solution. Heating the solution with KCN and cuprous cyanide followed by continued heating with conc. HCl gives a crystalline solid. Heating this solid with alkaline potassium permanganate gives a compound which dehydrates on heating to an anhydride ($\text{C}_8\text{H}_4\text{O}_3$). Compound X is

- 
- 
- 
- 

70. The final product of the following reaction is/are

- 
-  + 
-  + 
- 

71. The correct order of pseudohalide, polyhalide and interhalogen is

- BrI_2^- , OCN^- , IF_5
- IF_5 , BrI_2^- , OCN^-
- OCN^- , IF_5 , BrI_2^-
- OCN^- , BrI_2^- , IF_5

72. An inorganic halide (A) reacts with water to form two acids (B) and (C). (A) also reacts with NaOH to form two salts (D) and (E) which remain in solution. The solution gives white precipitate with both AgNO_3 and BaCl_2 solutions respectively. (A) is a useful organic reagent. The compound (A) is

- SOCl_2
- SO_2Cl_2
- S_2Cl_2
- SF_4

73. Following statements regarding the periodic trends of chemical reactivity to the alkali metals and the halogens are given. Which of these statements gives the correct picture?

- The reactivity decreases in the alkali metals but increases in the halogens with increase in atomic number down the group.
- In both the alkali metals and the halogens the chemical reactivity decreases with increase in atomic number down the group.
- Chemical reactivity increases with increase in atomic number down the group in both the alkali metals and halogens.
- In alkali metals the reactivity increases but in the halogens it decreases with increase in atomic number down the group.

74. According to IUPAC nomenclature sodium nitroprusside is named as

- sodiumpentacyanonitrosylferrate (II)
- sodiumpentacyanonitrosylferrate (III)
- sodiumnitroferrocyanide
- sodiumnitroferrocyanide

8 SELF STUDY GUIDE BITSAT

Follow first order kinetics with a half-life of 69.3 s at 500°C. Starting from the gas 'A' in a container at 500°C and at a pressure of 0.4 atm, the total pressure of the system after 230 s will be
a. 1.15 atm b. 1.32 atm c. 1.22 atm d. 1.12 atm

76. Which of the following gives paracetamol on acetylation?

77. In qualitative analysis when H_2S is passed through an aqueous solution of salt acidified with dilute HCl , a black ppt. is obtained. On boiling the precipitate with dil. HNO_3 , it forms a solution of blue colour. Addition of excess of aqueous solution of NH_3 to this solution gives

- a. deep blue ppt. of $Cu(OH)_2$
b. deep blue solution of $[Cu(NH_3)_4]^{2+}$
c. deep blue solution of $Cu(NO_3)_2$
d. deep blue solution of $Cu(OH)_2 \cdot Cu(NO_3)_2$

78. Titration of 0.1467 g of primary standard $Na_2C_2O_4$ required 28.85 mL of $KMnO_4$ solution. Calculate the molar concentration of $KMnO_4$ solution.

- a. 0.01518 M b. 0.001518 M
c. 0.15180 M d. 1.5180 M

79. Which of the following facts about the complex $[Cr(NH_3)_6]Cl_3$ is wrong?

- a. The complex involves d^2sp^3 hybridisation and its octahedral in shape.
b. The complex is paramagnetic.
c. The complex is an outer orbital complex.
d. The complex gives white precipitate with silver nitrate solution.

80. Sulphuric acid is a dibasic acid. It ionises in two stages and hence has two dissociation constants K_{a1} and K_{a2} . Which of the following is the correct observation regarding K_{a1} and K_{a2} ?

- a. $K_{a1} > K_{a2}$ b. $K_{a1} < K_{a2}$
c. $K_{a1} = K_{a2}$ d. $K_{a1} = 1.2 \times 10^{-2}$, $K_{a2} > 10$

PART III

a. English Proficiency

Directions (Q. Nos. 81-83) *In the following questions, find out which part of a sentence has an error. If there is no error mark part (d) as your answer.*

81. The road a. / to famous monument b. / passes through a forest. c./ No error d.
82. The master did not know a./ who of the servants b./ broke the glass c./ No error d.
83. Had I come a./ to know about his difficulties b./ I would have certainly helped c./ No error d.

Directions (Q. Nos. 84 and 85) *Fill in the blanks with suitable preposition from the alternatives given under each sentence.*

84. Her trekking was met obstacles.
a. with b. from c. by d. of
85. She has not got the shock of losing her father.
a. over b. at c. from d. with

Directions (Q. Nos. 86-88) *Select the word or phrase which is closest to the opposite in meaning of the italicised word or phrase.*

86. Yuvraj Singh is suffering from a *BENIGN* cancer.
a. Unfriendly b. Friendly c. Fatal d. Malignant

87. He is a *NOTED* figure of film industry.

- a. Known b. Unknown
c. Famous d. Infamous

88. *SAGACIOUS* decisions taken at right time in one's career has long effects.

- a. Foolish b. Intelligent c. Thoughtful d. Intuitive

Directions (Q. Nos. 89 and 90) *Choose the word nearest in meaning to the underlined word.*

89. The actor got *PEEVISH* on asking personal questions.

- a. Irritated b. Happy c. Shy d. Satisfied

90. The engineer *ROUGHED OUT* his ideas on a piece of paper while he talked.

- a. Shaped roughly b. Rejected
c. Drew a quick plan d. Describe inaccurately

Directions (Q. Nos. 91-95) *Read the passage given below and answer the questions that follow.*

The Centre and the States must become partners in the planning process to determine national priorities together. The process of planning would undergo a change in view of the changes in domestic economic situation and momentous trends emerging in the world. The development of human resource and the building up of an institutional framework

would have to receive priority attention. The role of the government would also have to be examined so as to fully involve the people in the process of nation-building. The main task would be to ensure that the real initiative, is transferred to the people. The private sector which would register expansion hereafter should keep this objective firmly in view. The need for an effective population policy is an urgent necessity in the country's planning strategy. The family welfare programme should not be treated as the Centre's responsibility alone. The States should evolve a suitable mechanism for closer involvement of the Government agencies, Zilla Parishads and Panchayats for making the family welfare programme a success.

91. Which one of the following statements is correct?
- Effective family welfare programme is Centre's responsibility alone.
 - Population policy and planning process are interlinked.
 - Family welfare programme should be left to the State Governments alone.
 - The State Government should use punitive¹⁰ measures to control population.
92. What should be given priority attention?
- Role of the Government
 - Decentralisation of power
 - Involvement of people in labour welfare
 - Human resource and institutional framework
93. Which one of the following statements is not correct?
- Role of the government in nation-building should be examined.
 - Real initiatives should be transferred to the people.
 - There should be no role for the government as far as planning is concerned.
 - The Centre and the States must become equal partners in the planning process.
94. What would force the planning process to undergo a change?
- Free market forces
 - Domestic economic situation and world trends
 - Domestic compulsions
 - International pressures
95. Which one of the following is implied by the expression 'momentous trends'?
- GDP growth of the country
 - Memorable historical events
 - Important changes in the international scene
 - Improvement of foreign exchange reserves

b. Logical Reasoning

96. Find out the wrong number.
- 2, 6, 12, 72, 865, 62208
- 72
 - 12
 - 62208
 - 865
97. Each of P, Q, T, A and B has different heights. T is taller than P and B but shorter than A and Q. P is not the shortest, who is the tallest?
- A
 - Q
 - A or Q
 - P or B

98. Identify the missing part of the question figure and select it from given answer figures.

Question Figure

Answer Figures

99. Select the related word from the given alternatives.

Mechanic : Spanner :: Carpenter : ?

- Tree
- Wood
- Furniture
- Saw

100. How many rectangles are there in the following figure?

- 8
- 18
- 17
- 20

101. In the following question find the odd letters/group from the given alternatives.

- BADC
- JILK
- NMPO
- VUWX

102. Find out which of the answer figures (a), (b), (c) and (d) completes the figure matrix?

Question Figure

Answer Figures

103. Among the four answer figures, which one can be formed from the cut out pieces given below in the question figures?

Question Figure

Answer Figures

104. A piece of paper is folded and cut as shown below in the question figures. From the given answer figures, indicates how it will appear when opened.

Question Figures

Answer Figures

105. In the following question three dots are placed in the figure marked as (A). The figure is followed by four alternatives marked as (a), (c), (c) and (d). One out of these four options contains region(s) common to the circle, square, triangle, similar to that marked by the dot in figure (A).

Question Figure

PART IV

Mathematics

106. If $A = \{x : x^2 = 1\}$ and $B = \{x : x^4 = 1\}$, then $A \Delta B$ is equal to

a. $\{-i, i\}$ b. $\{-1, i\}$
c. $\{-1, 1, -i, i\}$ d. None of these

107. If $2f(xy) = (f(x))^x + (f(y))^x$ for all $x, y \in R$ and $f(1) = a$ ($a \neq 1$). Then $\sum_{k=1}^n f(k) =$

a. $(a^n - 1) / (a - 1)$
b. $a(a^{n-1} - 1) / (a - 1)$
c. $a(a^n - 1) / (a - 1)$
d. $(a^n - 1) / a + 1$

108. Let $f(x) = x - 3$, $g(x) = 4 - x$. Then the set of values of x for which $|f(x) + g(x)| < |f(x)| + |g(x)|$ is true, is given by :

a. R b. $R - (3, 4)$
c. $R - [3, 4]$ d. None of these

109. If $a_1, a_2, a_3, \dots, a_{20}$ are AM's between 13 and 67, then the maximum value of $a_1, a_2, a_3, \dots, a_{20}$ is equal to

a. $(20)^{20}$ b. $(40)^{20}$
c. $(60)^{20}$ d. $(80)^{20}$

110. If p, q, r are in AP and are positive, the roots of the quadratic equation $px^2 + qx + r = 0$ are all real for

a. $\left| \frac{r}{p} - 7 \right| \geq 4\sqrt{3}$ b. $\left| \frac{p}{r} - 7 \right| < 4\sqrt{3}$
c. All p and r d. No p and r

111. The value of ${}^{47}C_4 + \sum_{r=1}^5 {}^{52-r}C_3$ is equal to

a. ${}^{47}C_6$ b. ${}^{52}C_5$
c. ${}^{52}C_4$ d. None of these

112. The number of numbers divisible by 3 that can be formed by four different even digits is

a. 36 b. 18
c. 0 d. None of these

113. If $n(A) = 1000$, $n(B) = 500$, $n(A \cap B) \geq 1$ and $n(A \cup B) = P$, then

a. $500 \leq P \leq 1000$ b. $1001 \leq P \leq 1498$
c. $1000 \leq P \leq 1498$ d. $1000 \leq P \leq 1499$

114. $\left\{ x \in R : \frac{2x-1}{x^3+4x^2+3x} \in R \right\}$ is equal to

a. $R - \{0\}$ b. $R - \{0, 1, 3\}$
c. $R - \{0, -1, -3\}$ d. $R - \left\{ 0, -1, -3, \frac{1}{2} \right\}$

115. Let $f(x)$ be a polynomial function of second degree. If $f(1) = f(-1)$ and a, b, c are in AP, then $f'(a), f'(b)$ and $f'(c)$ are in.
- AP
 - GP
 - Arithmetic-Geometric progression
 - None of the above
116. The value of $\lim_{x \rightarrow \infty} \frac{1}{n} \left\{ \frac{1}{n+1} + \frac{2}{n+2} + \dots + \frac{3n}{4n} \right\}$ is
- $5 - 2 \log 2$
 - $4 - 2 \log 2$
 - $3 - 2 \log 2$
 - $2 - 2 \log 2$
117. The coefficient of x^8 in the polynomial $(x-1)(x-2)\dots(x-10)$
- 2640
 - 1320
 - 1370
 - 2740
118. If $z = \frac{7+i}{3+4i}$, then z^{14} is
- 2^7
 - $2^7 i$
 - $(-2)^7$
 - $(-2)^7 i$
119. The solution of the equation $\frac{dy}{dx} + \frac{1}{x} \tan y = \frac{1}{x^2} \tan y \sin y$ is
- $2y = \sin y(1 - 2cx^2)$
 - $2x = \cot y(1 + 2cx^2)$
 - $2x = \sin y(1 - 2cx^2)$
 - $2x \sin y = 1 - 2cx^2$
120. The value of the definite integral $\int_0^{\pi/2} \frac{dx}{\tan x + \cot x + \operatorname{cosec} x + \sec x}$
- $1 - \frac{\pi}{4}$
 - $1 + \frac{\pi}{4}$
 - $\pi + \frac{1}{4}$
 - None of these
121. If $\mathbf{a}$ and $\mathbf{b}$ are two vectors such that $|\mathbf{a}| = 1, |\mathbf{b}| = 4$ and $\mathbf{a} \cdot \mathbf{b} = 2$, If $\mathbf{c} = (2\mathbf{a} \times \mathbf{b}) - 3\mathbf{b}$, then angle between $\mathbf{b}$ and $\mathbf{c}$
- $\frac{\pi}{6}$
 - $\frac{\pi}{3}$
 - $\frac{2\pi}{3}$
 - $\frac{5\pi}{6}$
122. Let x_1 and x_2 be the real roots of the equation $x^2 - (k-2)x + (k^2 + 3k + 5) = 0$, then maximum value of $x_1^2 + x_2^2$ is
- 19
 - 22
 - 18
 - 17
123. Circle centered at origin and having radius π units is divided by the curve $y = \sin x$ in two parts. Then area of upper parts equals to
- $\frac{\pi^2}{2}$
 - $\frac{\pi^3}{4}$
 - $\frac{\pi^3}{2}$
 - $\frac{\pi^3}{8}$
124. The root of the equation $2(1+i)x^2 - 4(2-i)x - 5 - 3i = 0$, where $i = \sqrt{-1}$, which has greater modulus, is
- $\frac{3-5i}{2}$
 - $\frac{5-3i}{2}$
 - $\frac{3+i}{2}$
 - $\frac{3i+1}{2}$
125. The equation $(\cos \beta - 1)x^2 + (\cos \beta)x + \sin \beta = 0$ in the variable x has real roots, then β lies in the interval
- $(0, 2\pi)$
 - $(-\pi, 0)$
 - $\left(-\frac{\pi}{2}, \frac{\pi}{2}\right)$
 - $(0, \pi)$
126. An ordered pair (α, β) for which the system of linear $(1+\alpha)x + \beta y + z = 2, \alpha x + (1+\beta)y + z = 3, \alpha x + \beta y + 2z$ has a unique solution.
- $(1, -3)$
 - $(-3, 1)$
 - $(2, 4)$
 - $(-4, 2)$
127. A bird is sitting on the top of a vertical pole 20 m high and its elevation from a point O on the ground is 45° . If flies off horizontally straight way from the point O . After one second, the elevation of the bird from O is reduced to 30° , then the speed (in m/s) of the bird is
- $40(\sqrt{2} - 1)$
 - $40(\sqrt{3} - \sqrt{2})$
 - $20\sqrt{2}$
 - $20(\sqrt{3} - 1)$
128. If one GM, g and two AM's p and q are inserted between two numbers a and b , then $(2p - q)(p - 2q)$ is equal to
- g^2
 - $-g^2$
 - $2g$
 - $3g^2$
129. When x^{100} is divided by $x^2 - 3x + 2$, the remainder is $(2^{k+1} - 1)x - 2(2^k - 1)$, then k is
- 97
 - 99
 - 100
 - 101
130. The mean of five observation is 5 and their variance is 9.20. If three of the given five observation are 1, 3 and 8, then a ratio of other two observations is
- 4 : 9
 - 6 : 7
 - 5 : 8
 - 10 : 3
131. How many three digit number satisfy the property that the middle digit is arithmetic mean of the first and the last digit.
- 41
 - 45
 - 43
 - 44
132. If $z = re^{i\theta}$, then $\arg(e^{iz})$ is
- $-r \sin \theta$
 - $r \cos \theta$
 - $e^{-r \sin \theta}$
 - $-r \cos \theta$
133. If 4 dice are rolled, then the number of ways of getting the sum 10 is
- 56
 - 64
 - 72
 - 80
134. Distance of point $A(1, 2)$ measured parallel to the line $3x - y = 10$ from the line $x + y + 5 = 0$, is
- $2\sqrt{5}$
 - $2\sqrt{10}$
 - $4\sqrt{5}$
 - $4\sqrt{10}$
135. Let $f(x) = a_0 + a_1 x^2 + a_2 x^4 + a_3 x^6 + \dots + a_n x^{2n}$ be a polynomial in a real variable x with $0 < a_1 < a_2 < a_3 < \dots < a_n$, the function $f(x)$ has
- neither a maxima nor a minima

12 SELF STUDY GUIDE BITSAT

- b. only one maxima
c. both maxima and minima
d. only one minima

136. If $f(x) = 2x^3 + x^4 + \log x$ and g is the inverse of f , then $g'(3)$ is equal to
a. $\frac{1}{9}$ b. $\frac{1}{7}$ c. $\frac{1}{11}$ d. $\frac{1}{8}$

137. A line passing through $P(3, 7, 1)$ and $R(2, 5, 7)$ meet the plane $3x + 2y + 11z - 9 = 0$ at Q . Then PQ is equal to

- a. $\frac{5\sqrt{41}}{59}$ b. $\frac{\sqrt{41}}{59}$
c. $\frac{50\sqrt{41}}{59}$ d. $\frac{25\sqrt{41}}{59}$

138. $\int \frac{8x^{43} + 13x^{38}}{(x^{13} + x^5 + 1)^4} dx$ equals to

- a. $\frac{x^{39}}{3(x^{13} + x^5 + 1)^3} + C$ b. $\frac{x^{39}}{(x^{13} + x^5 + 1)^3} + C$
c. $\frac{x^{39}}{5(x^{13} + x^5 + 1)^5} + C$ d. None of these

139. If $\mathbf{a} = -\hat{i} + \hat{j} + \hat{k}$ and $\mathbf{b} = 2\hat{i} + \hat{k}$, then find z component of a vector $\mathbf{r}$, which is coplanar with $\mathbf{a}$ and $\mathbf{b}$, $\mathbf{r} \cdot \mathbf{b} = 0$ and $\mathbf{r} \cdot \mathbf{a} = 7$.

- a. 0 b. 3 c. 6 d. 5/2

140. If x, y, z are three consecutive positive integers, $x - z + 2 = 0$, then

$$\frac{1}{2} \log_e x + \frac{1}{2} \log_e z + \frac{1}{2xz+1} + \frac{1}{3} \left(\frac{1}{2xz+1} \right)^3 + \dots \text{ is}$$

equal to

- a. $\log_e x$ b. $\log_e y$
c. $\log_e z$ d. None of these

141. The solution of differential equation

$$(xy^5 + 2y) dx - xdy = 0, \text{ is}$$

- a. $9x^8 + 4x^9y^4 = 9y^4C$ b. $9x^8 - 4x^9y^4 - 9y^4C = 0$
c. $x^8(9 + 4y^4) = 10y^4C$ d. None of these

142. The solution set of $\frac{|x-2|-1}{|x-2|-2} \leq 0$ is

- a. $[0, 1] \cup (3, 4)$ b. $[0, 1] \cup [3, 4]$
c. $[-1, 1] \cup (3, 4]$ d. None of these

143. Let $f(x) = \frac{x}{\sqrt{1+x^2}}$, the $\underbrace{\text{fofofo} \dots \text{fofofo}}_{x \text{ times}}(x)$ is

- a. $\frac{x}{\sqrt{1 + \left(\sum_{r=1}^n r\right)x^2}}$ b. $\frac{x}{\sqrt{1 + \left(\sum_{r=1}^n 1\right)x^2}}$
c. $\left(\frac{x}{\sqrt{1+x^2}}\right)^x$ d. $\frac{nx}{\sqrt{1+nx^2}}$

144. If $\log_5 \frac{(a+b)}{3} = \frac{\log_5 a + \log_5 b}{2}$, then $\frac{a^4 + b^4}{a^2 b^2}$ is equal to
a. 50 b. 47 c. 44 d. 53

145. The number of distinct solutions of the equation $\frac{5}{4} \cos^2 2x + \cos^4 x + \sin^4 x + \cos^6 x = 2$ in the interval $[0, 2\pi]$ is
a. 8 b. 10 c. 6 d. 15

146. If the tangent at a point $\left(4 \cos \phi, \frac{16}{\sqrt{11}} \sin \phi\right)$ to the ellipse $16x^2 + 11y^2 = 256$ is also a tangent to $x^2 + y^2 - 2x = 15$, then ϕ equals

- a. $\frac{\pi}{3}$ b. $\frac{\pi}{6}$ c. $-\frac{\pi}{6}$ d. $\frac{\pi}{4}$

147. The distance of point of intersection of the tangents to the parabola $x = 4y - y^2$ drawn at the points where it is meet by Y -axis, from its focus is

- a. $\frac{11}{4}$ b. $\frac{17}{4}$ c. $\frac{13}{4}$ d. 3

148. The value of the sum $\sum_{k=1}^{\infty} \sum_{n=1}^{\infty} \frac{k}{2^{n+k}}$ is

- a. 5 b. 4
c. 3 d. 2

149. A curve passes through $(2, 0)$ and the slope of the tangent at $P(x, y)$ is equal to $\frac{(x+1)^2 + y - 3}{x+1}$ then the

equation of the curve is

- a. $y = x^2 - 2x$ b. $y = x^3 - 8$
c. $y^2 = x^2 + 2x$ d. $y^2 = 5x^2 - 6$

150. Consider matrix $A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$, if $A^{-1} = \alpha I + \beta A$, where

$\alpha, \beta \in R$, then $(\alpha + \beta)$ is equal to (where A^{-1} denotes the inverse of matrix A)

- a. 1 b. $\frac{4}{3}$ c. $\frac{5}{3}$ d. $\frac{1}{3}$

Solutions

Physics

1. (c) As coil 2 with inductance L_2 has been wound by a similar wire as coil 1 but the direction of windings is reversed in each layer, so flux through L_2 will be zero.

As, $L_2 \propto \phi \Rightarrow L_2 = 0$

Also, since the dimensions, number of turns and number of layers of windings are equal in coil 1 and coil 3.

So, $L_1 = L_3$

2. (a) Since capacitors C_1 and C_2 are parallel, so their equivalent capacitance will be $(C_1 + C_2)$. Now, $(C_1 + C_2)$ and C_3 are in series, so the net equivalent capacitance of circuit will be,

$$\frac{1}{C} = \frac{1}{C_3} + \frac{1}{C_1 + C_2} = \frac{C_1 + C_2 + C_3}{(C_1 + C_2)C_3}$$

or $C = \frac{(C_1 + C_2)C_3}{C_1 + C_2 + C_3}$

Since V is the voltage of the battery, so charge on this system,

$$q = CV \Rightarrow q = \frac{(C_1 + C_2)C_3V}{(C_1 + C_2 + C_3)}$$

If the capacitance C_3 breaks down, then total equivalent capacitance will become

$$C' = C_1 + C_2$$

$\therefore$ New charge stored,

$$q' = C'V$$

$$\Rightarrow q' = (C_1 + C_2)V$$

Now, change in total charge,

$$\begin{aligned} \Delta q &= q' - q \quad [\because q' > q] \\ &= (C_1 + C_2)V - \frac{(C_1 + C_2)C_3V}{C_1 + C_2 + C_3} \end{aligned}$$

or $\Delta q = (C_1 + C_2)V \left[1 - \left(\frac{C_3}{C_1 + C_2 + C_3} \right) \right]$

3. (a) Let E' be the new radiant energy.

According to Stefan's law,

$$E \propto T^4$$

$$\Rightarrow \frac{E_2}{E_1} = \left(\frac{T_2}{T_1} \right)^4$$

$$\Rightarrow \frac{E'}{E} = \left\{ \frac{(T/4)}{T} \right\}^4 = \left(\frac{1}{4} \right)^4$$

or $E' = \frac{E}{256}$

4. (c) Area of rectangle, $A = lb = 15.2 \times 2.9 = 44.08 \text{ cm}^2$

Minimum possible measurement of scale = 0.1 cm

As we know, the product should have significant figures that are present in the measurement with least number of significant figures which is 2 in this case. So, area measured by scale = 44 cm^2 .

5. (b) In adiabatic process,

$$pV^\gamma = K$$

where, K is a constant.

Given that, $\gamma = \frac{4}{3} \Rightarrow pV^{4/3} = K$

Taking logarithm on both sides, we get

$$\log p + \frac{4}{3} \log V = \log K$$

$$\Rightarrow \frac{\Delta p}{p} + \frac{4}{3} \frac{\Delta V}{V} = 0$$

$$\Rightarrow \frac{\Delta V}{V} = -\frac{3}{4} \frac{\Delta p}{p}$$

Now, % change in volume,

$$\frac{\Delta V}{V} \times 100 = -\frac{3}{4} \left(\frac{\Delta p}{p} \times 100 \right)$$

It is given that, pressure decreases by $\frac{3}{4}\%$,

i.e. $\frac{\Delta p}{p} \times 100 = -\frac{3}{4}$

$$\therefore \frac{\Delta V}{V} \times 100 = -\frac{3}{4} \times \left(-\frac{3}{4} \right) = \frac{9}{16} \%$$

Hence, the volume increases by $\frac{9}{16} \%$.

6. (b) The given equation is

$$y = 4 \sin \left(\frac{\pi x}{15} \right) \cos(96\pi t) \quad \dots(i)$$

This equation is similar to the displacement equation of a travelling wave, $y = A \sin(\omega t - kx)$

On comparing these two equations, we get

$$\omega = 2\pi\nu = 96\pi$$

or $\nu = \frac{96\pi}{2\pi} = 48 \text{ Hz}$

Now, the velocity of the string at a point x at time t is obtained by differentiating Eq. (i) w.r.t.

$$\therefore \nu = \frac{dy}{dt} = -(4 \times 96\pi) \times \sin \left(\frac{\pi x}{15} \right) \sin(96\pi t)$$

At $x = 7.5 \text{ cm} = 7.5 \times 10^{-2} \text{ m}$ and $t = 0.25 \text{ s}$,

$$\begin{aligned} v &= -384\pi \sin\left(\pi \times \frac{7.5 \times 10^{-2}}{15}\right) \sin\left(96\pi \times \frac{25}{100}\right) \\ &= -384\pi \sin\left(\frac{\pi}{200}\right) \sin(24\pi) \\ &= 0 \end{aligned} \quad (\because \sin 24\pi = 0)$$

Hence, the velocity of the particle is zero.

7. (a) Potential at point A,

$$V_A = \frac{1}{4\pi\epsilon_0} \cdot \frac{q}{a}$$

Potential at point B,

$$V_B = \frac{1}{4\pi\epsilon_0} \cdot \frac{q}{b}$$

Work done in taking a charge Q from A to B,

$$W = Q(V_B - V_A) = \frac{Qq}{4\pi\epsilon_0} \left[\frac{1}{b} - \frac{1}{a} \right] = \frac{Qq}{4\pi\epsilon_0} \left[\frac{a-b}{ab} \right]$$

8. (b) For hydrogen-like atom,

$$\frac{1}{\lambda'} = RZ^2 \left(\frac{1}{n_1^2} - \frac{1}{n_2^2} \right) \quad \dots(i)$$

Similarly, for hydrogen atom,

$$\frac{1}{\lambda} = R \left(\frac{1}{n_1^2} - \frac{1}{n_2^2} \right) \quad \dots(ii)$$

For the element to have hydrogen-like spectrum, the ratio of the wavelengths for transition of electron between any two levels n_1 and n_2 should be constant.

Dividing eq. (ii) by eq. (i), we get

$$\frac{\lambda'}{\lambda} = \frac{R \left(\frac{1}{n_1^2} - \frac{1}{n_2^2} \right)}{RZ^2 \left(\frac{1}{n_1^2} - \frac{1}{n_2^2} \right)} \quad \text{or} \quad \frac{\lambda'}{\lambda} = \frac{1}{Z^2}$$

It is given that wavelength of the hydrogen atom is four times the wavelength of the hydrogen-like atom, i.e.

$$\lambda = 4\lambda'$$

Hence,

$$Z = 2$$

Now, the element with atomic number 2 is helium.

9. (c) Given, two small conducting spheres of equal radius (R).

Charge on first sphere, $q_1 = +20\mu\text{C}$

Charge on second sphere, $q_2 = -40\mu\text{C}$

$$\therefore F_1 = \frac{k(+20)(-40)}{R^2} = \frac{-k(800)}{R^2} \quad \dots(i)$$

The spheres have equal radii, so their capacities will be same. Now, if they are brought in contact, then the net charge,

$$q_{\text{net}} = (+20 - 40)\mu\text{C} = -20\mu\text{C}$$

So, each sphere will have charge, $q = \frac{q_{\text{net}}}{2} = -10\mu\text{C}$

$$\text{Now, } F_2 = \frac{k(q)(q)}{R^2} = \frac{k(-10)(-10)}{R^2} = \frac{k(100)}{R^2} \quad \dots(ii)$$

$$\text{Ratio, } \frac{F_1}{F_2} = -\frac{800}{100} = -8:1$$

Thus, ratio of F_1 to $F_2 = -8:1$

10. (b) Efficiency of carnot engine is given by

$$\eta = 1 - \frac{T_2}{T_1}$$

Given, $T_1 = 600 \text{ K}$

$$T_2 = 300 \text{ K}$$

$$T'_1 = 1600 \text{ K and } T'_2 = x \text{ K}$$

Carnot engine has same efficiency between 600 K to 300 K and 1600 K to x K, so

$$\left(1 - \frac{T_2}{T_1} \right) = \left(1 - \frac{T'_2}{T'_1} \right)$$

Substituting all the given values in above equation, we get

$$1 - \frac{300}{600} = 1 - \frac{x}{1600}$$

$$1 - \frac{1}{2} = 1 - \frac{x}{1600}$$

$$\frac{x}{1600} = 1 - \frac{1}{2} = \frac{1}{2}$$

$$\Rightarrow x = \frac{1600}{2} = 800 \text{ K}$$

11. (b) Given, initial speed of ball, $v = 16 \text{ ms}^{-1}$

Maximum height, $h = 9 \text{ m}$

Mass of ball, $m = 0.5 \text{ kg}$

Energy supplied to ball while throwing up,

$$E_1 = \frac{1}{2}mv^2 = \frac{1}{2} \times 0.5 \times 16 \times 16 = 64 \text{ J}$$

Energy stored when ball reaches the maximum height,

$$E_2 = mgh = 0.5 \times 9.8 \times 9 = 44.1 \text{ J}$$

Energy dissipated by air drag acting on the ball during the ascent,

$$E = E_1 - E_2 = 64 - 44.1 = 19.9 \text{ J}$$

12. (b) From the following circuit diagram, $\frac{R_1}{R_3} = \frac{R_2}{R_4}$, so the

given Wheatstone bridge is balanced.

Hence, there is no current in the wire of 10Ω resistance.

As,

Now, if the $10\ \Omega$ wire is replaced with $15\ \Omega$ wire, the bridge still remains balanced. Hence, current drawn from battery will be 10A.

13. (b) Given, force, $F = (8t)\text{ N}$, Mass, $m = 2\text{ kg}$

From Newton's second law,

Force = Rate of change of momentum

$$F = \frac{dp}{dt}$$

i.e. $dp = F dt$

$$\therefore \text{Momentum, } p = \int dp = \int_0^1 F \cdot dt = \int_0^1 8t \cdot dt$$

$$= 8 \left[\frac{t^2}{2} \right]_0^1 = 8 \left(\frac{1}{2} - 0 \right)$$

$$\Rightarrow p = 4\text{ kg ms}^{-1}$$

$$\text{Change in kinetic energy, } \Delta K = \frac{p^2}{2m} = \frac{(4)^2}{2 \times 2} = 4\text{ J}$$

From work-energy theorem,

Work done = Change in kinetic energy

So, work done by the force during the first 1s,

$$W = \Delta K = 4\text{ J}$$

14. (b) As, RC is the time constant, so it has the dimension of time and V has the dimensions of $L \frac{dI}{dt}$.

$$\therefore \text{Dimensions of } \frac{L}{RCV} \cdot \left[\frac{L}{RCV} \right] = \frac{[L]}{[RC][V]}$$

$$\frac{[L]}{[T][L]} \left[\frac{A}{T} \right] = \frac{[L][T]}{[T][L][A]} = \frac{1}{[A]}$$

So, $\left(\frac{L}{RCV} \right)$ has the dimensions $[A^{-1}]$, i.e. same as the dimensions of $\frac{1}{\text{current}}$.

15. (b) Given, magnetic field,

$$B = 10 \times 10^{-8} \sin(1 \times 10^7 z - 3.6 \times 10^{15} t)\text{ T} \quad \dots(i)$$

Standard equation of magnetic field,

$$B = B_0 \sin(kz - \omega t) \quad \dots(ii)$$

On comparing Eqs. (i) and (ii), we get

$$B_0 = 10 \times 10^{-8}\text{ T}$$

The average intensity of the beam,

$$I_{av} = \frac{B_0^2 c}{2\mu_0} = \frac{1}{2} \times \frac{(10 \times 10^{-8})^2 \times 3 \times 10^8}{4\pi \times 10^{-7}} [\because c = 3 \times 10^8\text{ ms}^{-1}]$$

$$= 1.19\text{ W/m}^2$$

16. (c) Distance = area under speed~time graph which is shown in the figure below.

$\therefore$ Distance travelled in 20s = area of $\triangle OAB$ + area of $\triangle BCD$

$$= \frac{1}{2} \times 6 \times 10 + \frac{1}{2} \times 6 \times 10 = 60\text{ m}$$

Displacement in 20s = area of $\triangle OAB$ - area of $\triangle BCD$

$$= \frac{1}{2} \times 6 \times 10 - \frac{1}{2} \times 6 \times 10 = 30 - 30 = 0$$

$$\text{Hence, average velocity} = \frac{\text{displacement}}{\text{time}} = \frac{0}{t} = 0$$

17. (b) The focal length of a convex lens of refractive index μ_g in air,

$$\frac{1}{f_{air}} = (\mu_g - 1) \left(\frac{1}{R_1} - \frac{1}{R_2} \right) \quad \dots(i)$$

where, R_1, R_2 = radii of curvatures of its first and second surface.

When the lens is immersed in a liquid of refractive index μ_l , then refractive index of material of lens (glass) w.r.t. liquid is,

$${}_l\mu_g = \frac{\mu_g}{\mu_l} \quad \dots(ii)$$

Now, focal length of lens in liquid

$$\frac{1}{f'} = ({}_l\mu_g - 1) \left(\frac{1}{R_1} - \frac{1}{R_2} \right) \quad \dots(iii)$$

Dividing Eq. (i) by Eq (iii), we get

$$\frac{f'}{f_{air}} = \frac{\mu_g - 1}{({}_l\mu_g - 1)} = \frac{\mu_g - 1}{\left(\frac{\mu_g}{\mu_l} - 1 \right)}$$

Given, $f' = 0.5\text{ m}$, $f_{air} = 0.2\text{ m}$, $\mu_g = 1.5$

Substituting all these values in above equation, we get

$$-\frac{0.5}{0.2} = \frac{1.5 - 1}{\left(\frac{1.5}{\mu_l} - 1 \right)} = \frac{0.5}{\left(\frac{1.5}{\mu_l} - 1 \right)}$$

$$\Rightarrow \frac{1.5}{\mu_l} - 1 = -0.2 \Rightarrow \frac{1.5}{\mu_l} = 1 - 0.2 = 0.8$$

$$\Rightarrow \mu_l = \frac{15}{8}$$

$$\therefore \text{Refractive index of liquid} = \frac{15}{8}$$

18. (b) Given, resistance of galvanometer, $R_g = 60 \Omega$

$$\text{Current, } I_g = 4.5 \text{ mA} = 4.5 \times 10^{-3} \text{ A}$$

Resistance used in converting a galvanometer into voltmeter, $R = 4.5 \text{ k}\Omega = 4.5 \times 10^3 \Omega$

To make the voltmeter, the galvanometer and the high resistance (R) have to be connected in series combination as shown below.

$\therefore$ Maximum current in galvanometer is

$$I_g = \frac{E}{R + R_g}$$

$$\Rightarrow E = I_g(R + R_g) = 4.5 \times 10^{-3} \times (4.5 \times 10^3 + 60) = 20.5 \text{ V}$$

19. (b) The given combination of gates is shown below

The output of this combination can be determined by Boolean algebra.

$$\therefore \text{Output, } X = \overline{\overline{A} \cdot \overline{B}} = \overline{\overline{A}} + \overline{\overline{B}} \text{ [Using De Morgan's theorem]}$$

$$\Rightarrow X = A + B$$

This is the output of OR gate. Hence, the given combination of gates yield OR gate.

20. (c) From gas equation,

$$pV = nRT \Rightarrow p = \frac{nRT}{V}$$

Pressure of one mole of O_2 gas,

$$(p)_{\text{O}_2} = \frac{1 \times RT}{V} \quad \dots(i)$$

Pressure of one mole of He gas,

$$(p)_{\text{He}} = \frac{1 \times R(2T)}{V} \quad \dots(ii)$$

Dividing Eq. (ii) by Eq. (i), we get

$$\therefore \frac{(p)_{\text{He}}}{(p)_{\text{O}_2}} = 2 \Rightarrow (p)_{\text{He}} = 2(p)_{\text{O}_2} = 2p$$

$$21. (b) \text{ Acceleration, } a = \frac{dv}{dt} \Rightarrow dv = adt$$

$$\text{Integrating both sides, } \int dv = \int adt$$

$$\text{Given, } a = (3t^2 - 2t + 1) \text{ ms}^{-2}$$

Substituting this value in above equation, we get

$$v = \int (3t^2 - 2t + 1) dt$$

$$\Rightarrow v = t^3 - t^2 + t + C \quad \dots(i)$$

$$\text{At } t = 1 \text{ s, } v = 1 \text{ m/s}$$

Substituting these values in Eq. (i), we get

$$\therefore 1 = 1 - 1 + 1 + C \Rightarrow C = 0$$

Substituting this value of C in Eq. (i), we get

$$v = t^3 - t^2 + t$$

$$\text{When } t = 4 \text{ s, } v = (4)^3 - (4)^2 + 4 = 52 \text{ m/s}$$

22. (b) From Ideal gas equation,

$$pV = nRT = \frac{mRT}{M}$$

$$n = \frac{\text{Molar mass (m)}}{\text{Molecular weight (M)}}$$

Here, n = number of moles

R = Gas constant

V = Volume

$$\Rightarrow \frac{pV}{m} = \frac{RT}{M}$$

$$\Rightarrow \frac{p}{(m/V)} = \frac{RT}{M}$$

$$\frac{p}{d} = \frac{RT}{m} \quad \left[\because \frac{m}{V} = d \right]$$

$$\Rightarrow \frac{p}{d} \propto T$$

$\Rightarrow$ Slope of p versus d graph $\propto T$

Since, slope is less for the gas at temperature T_1 .

$$\text{Therefore, } T_1 < T_2$$

23. (d) The two spheres are touching each other as shown below.

Let m be the mass of each sphere.

Gravitational force between the spheres,

$$\begin{aligned}
 F &= G \frac{m \cdot m}{(2r)^2} = G \cdot \frac{m^2}{4r^2} \\
 &= G \cdot \left[\frac{4}{3} \pi r^3 \cdot \rho \right]^2 \quad [\text{Mass} = \text{volume} \times \text{density}] \\
 &= \frac{4G\pi^2 r^6 \rho^2}{3 \times 4r^2} \\
 \Rightarrow F &= \left(\frac{4G\pi^2 \rho^2}{3} \right) r^4 \Rightarrow F \propto r^4
 \end{aligned}$$

24. (a) Power of first spherical lens, $P_1 = -4$ D

The power of this lens is negative, hence it is diverging lens.

Focal length of first spherical lens,

$$f_1 = \frac{1}{P_1} = \frac{1}{(-4D)} = -0.25 \text{ m} = -25 \text{ cm}$$

Power of second spherical lens, $P_2 = 5$ D

The power of this lens is positive, hence it is converging lens.

Focal length of second spherical lens,

$$f_2 = \frac{1}{P_2} = \frac{1}{5D} = 0.2 \text{ m} = 20 \text{ cm}$$

The given situation is shown in the following figure.

Now, the image I_1 will be considered as object for converging lens.

For converging lens, distance of object,

$$u = -(25 + 15) = -40 \text{ cm}$$

and $f_2 = 20 \text{ cm}$

$\therefore$ Using lens formula,

$$\frac{1}{f_2} = \frac{1}{v} - \frac{1}{u} \Rightarrow \frac{1}{20} = \frac{1}{v} - \frac{1}{-40}$$

$$\Rightarrow v = 40 \text{ cm}$$

Since v is positive, so image formed will be real and will be formed at a distance of 40 cm from the lens of power 5D (converging lens).

25. (a) From 2nd equation of rotational motion,

$$\theta = \omega_0 t + \frac{1}{2} \alpha t^2$$

Given, $\theta = 5 \text{ rad}$, $t = 1 \text{ s}$, $\omega_0 = 0$

Substituting all these values in above equation, we get

$$5 = 0 + \frac{1}{2} \alpha (1)^2 \Rightarrow \alpha = 10 \text{ rad/s}^2$$

The angle rotated by wheel of car during first two seconds,

$$\theta_2 = 0 + \frac{1}{2} \alpha t^2 = \frac{1}{2} \times 10 \times 2^2 = 20 \text{ radians}$$

Hence, angle rotated during the 2nd second

$$\begin{aligned}
 &= \theta_2 - \theta \\
 &= 20 - 5 = 15 \text{ radians}
 \end{aligned}$$

26. (d) Kinetic energy in photoelectric effect can be given as

$$KE = W - W_0 \quad \begin{cases} W \rightarrow \text{incident energy} \\ W_0 \rightarrow \text{work function} \end{cases}$$

Given, $(KE)_1 = 1.5 - 0.5 = 1 \text{ eV}$

$$(KE)_2 = 2.5 - 0.5 = 2 \text{ eV}$$

$$\therefore \frac{(KE)_1}{(KE)_2} = \frac{1}{2} = \frac{2}{3}$$

$$\Rightarrow \frac{\frac{1}{2} m v_1^2}{\frac{1}{2} m v_2^2} = \frac{2}{3} \Rightarrow \frac{v_1}{v_2} = \sqrt{\frac{2}{3}}$$

$$\therefore v_1 : v_2 = \sqrt{2} : \sqrt{3}$$

So, the ratio of maximum speeds of emitted electrons is $\sqrt{2} : \sqrt{3}$.

27. (d) Initial momentum, $P_i = mv$

$$P_i = m\sqrt{2gh} \quad [\because v = \sqrt{2gh}]$$

New height of body, $h_1 = h + 3h = 4h$

Now, final momentum,

$$\begin{aligned}
 P_f &= m\sqrt{2g \cdot h_1} \\
 &= m\sqrt{2g(4h)} \\
 &= m \cdot 2\sqrt{2gh} = 2P_i
 \end{aligned}$$

$$\begin{aligned}
 \therefore \% \text{ change in momentum} &= \frac{P_f - P_i}{P_i} \times 100 \\
 &= \frac{2P_i - P_i}{P_i} \times 100 \\
 &= 100\%
 \end{aligned}$$

28. (a) In this case, the diode is forward biased. Potential drop in a germanium diode in forward bias is around 0.3V.

Hence, current through the given circuit,

$$\begin{aligned}
 I &= \frac{V_{\text{net}}}{R_{\text{eq}}} = \frac{5 - 0.3}{2 + 3} = \frac{4.7}{5} \\
 I &= 0.94 \text{ A}
 \end{aligned}$$

29. (d) Number of active nuclei after time t in a sample of radioactive substance is given by

$$N = N_0 e^{-\lambda t}$$

where, N_0 = initial number of nuclei at $t = 0$ and λ = decay constant.

Here, at $t = 0$, number of nuclei in sample X and Y are equal,

$$\text{i.e., } (N_0)_X = (N_0)_Y = N_0$$

$$\text{Also, } \lambda_X = 4\lambda \text{ and } \lambda_Y = \lambda$$

So, after time t , number of active nuclei in X and Y are

$$N_X = N_0 e^{-4\lambda t} \text{ and } N_Y = N_0 e^{-\lambda t}$$

$$\therefore \frac{N_X}{N_Y} = e^{-2\lambda t}$$

$$\frac{1}{e^3} = \frac{1}{e^{2\lambda t}} \quad \left[\text{Given, } \frac{N_X}{N_Y} = \frac{1}{e^3} \right]$$

$$\Rightarrow 2\lambda t = 3 \Rightarrow t = \frac{3}{2\lambda}$$

30. (c) Given, current in the wire, $I = 10\text{ A}$

$$\text{Radius of the wire, } R = 20\pi \text{ cm} = 20\pi \times 10^{-2} \text{ m}$$

Magnetic field produced by semi-circular current carrying thin wire at centre O ,

$$B = \frac{\mu_0 I}{4R}$$

Substituting all the given values in above equation, we get

$$B = \frac{4\pi \times 10^{-7} \times 10}{4 \times 20\pi \times 10^{-2}}$$

$$B = 5 \times 10^{-6} \text{ T}$$

Now, magnitude of force per unit length,

$$\begin{aligned} F &= IB = 10 \times 5 \times 10^{-6} \\ &= 50 \times 10^{-6} \text{ N/m} \\ &= 50 \mu\text{N/m} \end{aligned}$$

31. (b) Given, area, $A = 5 \text{ cm}^2 = 5 \times 10^{-4} \text{ m}^2$

Number of turns per unit length, $n = 4000 \text{ turns/m}$

Magnetic field, $B = \pi T$

Current, $i = 5 \text{ A}$

Now, magnetic intensity, $H = ni = 4000 \times 5 = 2 \times 10^4 \text{ Am}^{-1}$

$$\text{As, } B = \mu_0 (H + I) \quad [I = \text{intensity of magnetisation}]$$

Substituting all the values in above equation, we get

$$\pi = 4\pi \times 10^{-7} ((2 \times 10^4) + I)$$

$$\frac{1}{4} \times 10^7 = (2 \times 10^4) + I$$

$$250 \times 10^4 = 2 \times 10^4 + I$$

$$I = 250 \times 10^4 - 2 \times 10^4$$

$$\Rightarrow I = 248 \times 10^4 \text{ A/m}$$

Now, pole strength, $m = I \times A = 248 \times 10^4 \times 5 \times 10^{-4}$

$$= 1240 \text{ A-m}$$

32. (b) Given, mass of plane, $M = 10000 \text{ kg}$

Coefficient of friction, $\mu = 0.2$

Distance, $s = 50 \text{ m}$

Initial speed, $u = 0$

Final speed, $v = 72 \text{ kmh}^{-1} = 20 \text{ ms}^{-1}$

Let a be the acceleration of the plane.

From third equation of motion,

$$v^2 - u^2 = 2as$$

$$(20)^2 - (0)^2 = 2 \times a \times 50$$

$$\therefore a = \frac{20 \times 20}{100} = 4 \text{ ms}^{-2}$$

Force required to provide necessary acceleration to the plane,

$$F_1 = ma = 10000 \times 4 = 4 \times 10^4 \text{ N}$$

Force required to overcome friction by engine,

$$\begin{aligned} F_2 &= \mu R = \mu mg = 0.2 \times 10000 \times 9.8 \\ &= 1.96 \times 10^4 \text{ N} \end{aligned}$$

Therefore, the minimum force required by the engine,

$$F_1 + F_2 = 4 \times 10^4 + 1.96 \times 10^4 = 5.96 \times 10^4 \text{ N}$$

33. (c) Given, reverse voltage, $E = 120 \text{ V}$

Change in current, $\Delta I = 0.50 - 0.20 = 0.30 \text{ A}$

Time, $\Delta t = 0.030 \text{ ms} = 0.030 \times 10^{-3} \text{ s}$

In an inductor (choke),

$$\text{Emf induced, } E_{\text{induced}} = L \frac{dI}{dt}$$

$$\begin{aligned} \therefore \text{Self inductance of choke, } L &= \frac{E \times \Delta t}{\Delta I} \\ &= \frac{120 \times 0.030 \times 10^{-3}}{0.30} \\ &= 12 \times 10^{-3} \text{ H} \end{aligned}$$

34. (b) Given, linear dimensions increase by a factor of 8.

So, volume will become $(8)^3$ times and area of cross-section will become $(8)^2$ times.

$$\text{Now, stress} = \frac{\text{weight}}{\text{area}}$$

Weight = (volume $\times$ density $\times g$) will also become $(8)^3$ times.

$$\therefore \text{New stress} = \frac{(8)^3 \times w_0}{(8)^2 \times A_0} = 8 \left(\frac{w_0}{A_0} \right)$$

Hence, the stress increases by a factor of 8.

35. (c) Let, γ be the adiabatic exponent for the mixture.

For monoatomic gas,

$$n_1 = 2 \text{ and } \gamma_1 = \frac{5}{3}$$

For diatomic gas,

$$n_2 = 3 \text{ and } \gamma_2 = \frac{7}{5}$$

For the mixture,

$$\frac{n_1 + n_2}{\gamma - 1} = \frac{n_1}{\gamma_1 - 1} + \frac{n_2}{\gamma_2 - 1}$$

Substituting all the given values in above equation, we get

$$\begin{aligned} \frac{2+3}{\gamma-1} &= \frac{2}{\frac{5}{3}-1} + \frac{3}{\frac{7}{5}-1} \\ \Rightarrow \frac{5}{\gamma-1} &= \frac{21}{2} \Rightarrow \gamma = \frac{31}{21} \end{aligned}$$

36. (c) Let a be the acceleration of the lift.

Given, the ratio of time periods of pendulum while the lift is moving upwards and downwards,

$$T_1 : T_2 = 1 : 3$$

When lift is moving upwards, then total time period,

$$T_1 = 2\pi \sqrt{\frac{l}{g+a}} \quad \dots(i)$$

When lift is moving downwards, then total time period,

$$T_2 = 2\pi \sqrt{\frac{l}{g-a}} \quad \dots(ii)$$

Dividing Eq. (i) by Eq. (ii), we get

$$\frac{T_1}{T_2} = \sqrt{\frac{g-a}{g+a}} \Rightarrow \frac{1}{3} = \sqrt{\frac{g-a}{g+a}}$$

$$\text{or } \frac{g-a}{g+a} = \left(\frac{1}{3}\right)^2 \quad \text{or } \frac{g-a}{g+a} = \frac{1}{9}$$

$$\Rightarrow 9g - 9a = g + a$$

$$\Rightarrow 9g - g = 9a + a$$

$$\Rightarrow 10a = 8g$$

$$a = \frac{8g}{10} = \frac{8 \times 10}{10} = 8 \text{ m/s}^2$$

37. (a) As, orbital velocity of a satellite, $v = \sqrt{\frac{GM}{r}}$

$$\text{Hence, } v \propto \frac{1}{\sqrt{r}}$$

$$\% \text{ increase in speed} = \frac{1}{2} (\% \text{ decrease in radius})$$

$$= \frac{1}{2} (2\%) = 1\%$$

Thus, the speed of satellite will increase by 1%.

38. (a) Given, $\omega = 2000 \text{ rad s}^{-1}$

$$L = 5 \text{ mH} = 5 \times 10^{-3} \text{ H}$$

$$C = 50 \mu\text{F} = 50 \times 10^{-6} \text{ F}$$

$$V = 30 \text{ V}$$

Inductive reactance,

$$X_L = \omega L = 2000 \times 5 \times 10^{-3} = 10 \Omega$$

and capacitive reactance,

$$X_C = \frac{1}{\omega C} = \frac{1}{50 \times 10^{-6} \times 2000} = \frac{100}{10} = 10 \Omega$$

$$\Rightarrow X_L = X_C$$

The given circuit is resonant circuit.

Hence, impedance of circuit, $Z = R = 4 + 6 + 0.5 = 10.5 \Omega$

$$\text{Amplitude of current, } I_0 = \frac{V}{Z} = \frac{30}{10.5} = 2.85 \text{ A}$$

39. (d) Work done, $W = \text{area under } F\text{-}s \text{ graph}$

$\therefore$ Total work done is covering an initial distance of 40 m,

$W = \text{area of trapezium } ABCD + \text{area of trapezium } CEFD$

$$= \frac{1}{2} \times 20(20 + 30) + \frac{1}{2} \times 10 \times (20 + 40) = 800 \text{ J}$$

$$[\because \text{Area of trapezium} = \frac{1}{2} \times \text{height} \times \text{sum of parallel sides}]$$

$$\Rightarrow W = 800 \text{ J}$$

40. (b) Given, potential gradient = 0.4 mV cm^{-1}

$$= 0.4 \times 10^{-3} \text{ V cm}^{-1}$$

Length of wire, $l = 10 \text{ m} = 1000 \text{ cm}$

Electromagnetic force of cell, $E = 4 \text{ V}$

Potential gradient along wire

$$= \frac{\text{potential difference along wire}}{\text{length of wire}}$$

$$\Rightarrow 0.4 \times 10^{-3} = \frac{l \times 40}{1000} \text{ Vcm}^{-1}$$

Let R be the required resistance unplugged in the box.

$$\therefore \text{Current in wire, } I = \frac{4}{400} \text{ A} \quad \dots(i)$$

$$\text{Also, } I = \frac{E}{R + R'} = \frac{4}{40 + R} \quad \dots(ii)$$

Equating Eqs. (i) and (ii), we get

$$\frac{4}{40 + R} = \frac{4}{400} \Rightarrow R = 400 - 40 = 360 \Omega$$

Chemistry

42. (b) From molarity equation,

$$M_1 V_1 = M_2 V_2$$

Acid Base

$$M_1 \times 50.0 = 0.10 \times 39.30$$

$$\therefore M_1 = \frac{0.10 \times 39.30}{50} = 0.0786 \text{ M}$$

When half equivalence point is reached,

$$[\text{HA}] = [\text{A}^-]$$

$$\text{pH} = \text{p}K_a + \log \frac{[\text{A}^-]}{[\text{HA}]}$$

$$\text{pH} = \text{p}K_a = 4.85$$

43. (d) The complete equation is given as follows:

44. (a) Statement (a) is incorrect. Because α -D-fructose and β -D-fructose are anomers, diastereomers and geometrical isomers and not enantiomers.

Rest of the given statements are correct.

45. (d) Option (d) does not contain a pair of mixed oxides. Fe_2O_3 is not mixed oxide.

While, Mn_3O_4 ($2\text{MnO} + \text{MnO}_2$); Co_3O_4 ($\text{CoO} + \text{Co}_2\text{O}_3$); Fe_3O_4 ($\text{Fe}_2\text{O}_3 + \text{FeO}$) and Pb_3O_4 ($2\text{PbO} + \text{PbO}_2$), all are mixed salts.

46. (a) According to Faraday's first law of electrolysis:

The quantity of charge passed

$$= I \times t = (10 \text{ amp}) \times (60 \times 60 \text{ s}) = 36000 \text{ C.}$$

$2 \times 96500 \text{ C}$ of charge deposit copper– 63.5 g

36000 C of charge deposit copper

$$= \frac{(63.5 \text{ g})}{(2 \times 96500 \text{ C})} \times (36000 \text{ C}) = 11.84 \text{ g}$$

Thus, 11.84 g of copper will dissolve from the anode and the same amount from the solution will get deposited on the cathode. The concentration of the solution will remain unchanged.

47. (b) The complete reaction is given as follows:

48. (a) Statement (a) is correct. Rest of the all statements are incorrect. These are explained as follows:

(a) $\text{Cl}_2(g) \longrightarrow 2\text{Cl}(g)$

As randomness is increasing. Therefore, ΔS is positive for this reaction.

$\therefore$ Statement is correct.

(b) In closed container, $\Delta V = 0$, hence work done is zero. There is no heat exchange. Hence, $\Delta E = q + W = 0$.

$\therefore$ Statement is incorrect.

(c) ΔG will be zero only when equilibrium is reached.

$\therefore$ Statement is incorrect.

(d) $\Delta G^\circ = -RT \ln K_{eq}$, not a function of pressure. Thus, this statement is also incorrect.

49. (b) Statement I and III are correct and statement II incorrect.

$$(I) \frac{T_c}{p_c} = \frac{8a}{27Rb} \cdot \frac{27b^2}{a} = \frac{8b}{R} \therefore \frac{T_c}{p_c} \propto b$$

$$(II) T_c = \frac{8a}{27Rb} \text{ and } T_b = \frac{a}{Rb}$$

$$\text{Thus, } T_b > T_c$$

(III) When, T_c is attained.

$$\therefore \left(\frac{\partial p}{\partial V} \right) = 0$$

22 SELF STUDY GUIDE BITSAT

50. (a) The reaction can be completed as follows:

52. (a) Perhydrol means 30% solution of H_2O_2 .

H_2O_2 decomposes as :

Volume strength of 30% H_2O_2 solution is 100 that means 1 mL of this solution on decomposition given 100 mL oxygen.

Since, 100 mL of oxygen is obtained by = 1 mL of H_2O_2

$\therefore$ 1000 mL of oxygen will be obtained by

$$= \frac{1}{100} \times 1000 \text{ mL of H}_2\text{O}_2$$

$$= 10 \text{ mL of H}_2\text{O}_2$$

53. (c) At top of a mountain,

$$T_1 = 0 + 273\text{K}, p_1 = \frac{710}{760} \text{ atm and density} = \rho_1$$

At bottom of mountain,

$$T_2 = 303 \text{ K}, p_2 = 1 \text{ atm and density} = \rho_2$$

$$\therefore pV = \frac{w}{M} RT \text{ or } p = \rho \frac{RT}{M}$$

$$\therefore \frac{\rho_1}{\rho_2} = \frac{p_1}{p_2} \times \frac{T_2}{T_1}$$

$$\text{or } \frac{\rho_1}{\rho_2} = \frac{710/760 \times 303}{273 \times 1} = \frac{104}{1}$$

54. (b) The correct option is (b).

The shapes of molecules are given below.

55. (c) In option (c), the hydrogen of $-\text{CH}$ group is surrounded by three $\text{C}-\text{CH}_3$ groups as:

Here, O of CO attracts, the electron density towards itself. Thus, (c) has most acidic hydrogen among given compounds.

56. (c) The process by which the aquatic life gets deprived oxygen results in subsequent loss of biodiversity is known as eutrophication. It is due to the reduction in concentration of the dissolved oxygen in water due to phosphate pollution in water.

57. (d) As we know,

$$v = \frac{1}{\lambda} = \frac{(\text{IE})_H Z^2}{hc} \times \left[\frac{1}{n_1^2} - \frac{1}{n_2^2} \right]$$

Given, $n_1 = 2, n_2 = 5$

$$(\text{IE})_H = 13.6 \text{ eV} = 13.6 \times 1.6 \times 10^{-19} \text{ J}$$

$$v = \frac{1}{\lambda} = \frac{13.6 \times 1.6 \times 10^{-19} \text{ J}}{6.6 \times 10^{-34} \text{ Js} \times 3 \times 10^8 \text{ ms}^{-1}} \left[\frac{1}{2^2} - \frac{1}{5^2} \right]$$

$$= 2.2988 \times 10^6 \text{ m}^{-1}$$

$$\therefore \lambda = \frac{1}{v} \Rightarrow \lambda = 4.35 \times 10^{-7} \text{ m} = 435 \times 10^{-9} \text{ m}$$

$$= 435 \text{ nm}$$

58. (c) Heat change at constant pressure means enthalpy change ($\Delta_r H = q_p$).

Heat of formation of CO is written as :

Now we have,

Subtracting appropriately (i.e., I-II), we get,

From Hess's law, $\Delta_f H^\ominus = \Delta_c H_1^\ominus - \Delta_c H_2^\ominus$

$$\Rightarrow \Delta_f H^\ominus = -393.5 - (-283) = 110.5 \text{ kJ/mol}$$

Now, calculation of the heat of formation at constant volume means that we have to calculate change in internal energy (i.e. $\Delta_r U$)

$$\begin{aligned} \text{Using, } \Delta_r H &= \Delta_r U + p\Delta V & [\text{For a chemical reaction}] \\ &= \Delta_r U + \Delta n_g RT & [\text{As } pV = nRT] \end{aligned}$$

$$[\Delta n_g = \text{gaseous moles of products} - \text{gaseous moles of reactant}]$$

$$\Rightarrow \Delta_r U = \Delta_r H - \Delta n_g RT$$

$$\text{Now putting the values : } \Delta n_g = 1 - \frac{1}{2} = \frac{1}{2}, \quad T = 298 \text{ K,}$$

$$R = 8.314 \text{ J/K/mol and } \Delta_f H^\ominus = -110.5 \text{ kJ/mol}$$

$$\begin{aligned} \Rightarrow \Delta_r U^\ominus &= -110.5 - \frac{1}{2} \times 8.314 \times 2.98 \times 10^{-3} \\ &= -111.7 \text{ kJ/mol} \end{aligned}$$

59. (b) If $n = n$, then $l = 0, 1, 2 \dots n$

n	l	Sub-orbit	$(n + l)$
1	0	1s	1
	1	1p	2
2	0	2s	2
	1	2p	3
	2	2d	4
3	0	3s	3
	1	3p	4
	2	3d	5
	3	3f	6

Thus, energy order is,

$$1s < 1p < 2s < 2p < 3s < 2d < 3p$$

Sc (21) will have electronic configuration as :

$$1s^2 1p^6 2s^2 2p^6 3s^2 2d^3$$

60. (c)	A	+	2B	$\rightleftharpoons$	2C	+	D	
Initial	1.1		2.2		0		0	
At equili.	1.1-x		2.2-2x		2x		x	[2x = 0.2]
	1.1-0.1		2.2-0.2		0.2		0.1	[x = 0.1]
	1		2		0.2		0.1	

$$K_C = \frac{[C]^2 [D]}{[A] [B]^2} = \frac{(0.2)^2 (0.1)}{(1)(2)^2} = 0.001$$

61. (c) Chemical reaction given in option 'c' is correct. Rest of the given chemical reactions are incorrect. These can be corrected as:

62. (d) $Na_2S_2O_3 + H_2SO_4 \longrightarrow Na_2SO_4 + SO_2 + S_8 + H_2O$

Oxidation number of S in $Na_2S_2O_3 = +2$

Oxidation number of S in $H_2SO_4 = +6$

Oxidation number of S in $SO_2 = +4$

Oxidation number of S in $Na_2SO_4 = +6$

Oxidation number of S in $S_8 = 0$

So, sulphur can oxidise from +2 to +4 as well as reduce to 0 (S_8).

63. (c)

64. (a) $-\Delta S = \frac{\Delta G}{T}$, also $\frac{\Delta G}{T}$ is slope in Ellingham diagram. ΔS is different for different reactions as they have different slopes.

Rest of the statements (b), (c) and (d) are correct about Ellingham diagram.

65. (c) Phenolphthalein indicator changes into pink colour due to change in pH and not due to adsorption.

66. (c) $HBr \longrightarrow H^+ + Br^-$

67. (a) Z_{eff} for fcc = 4

Z_{eff} for bcc = 2

$$\text{Atomic volume of } \alpha\text{-form} = \frac{(3.68 \times 10^{-8})^3}{4} \times N_A$$

$$\text{Atomic volume of } \beta\text{-form} = \frac{(2.92 \times 10^{-8})^3}{2} \times N_A$$

As atomic weight is same, element is same, so the density ratio is

$$\rho_\alpha : \rho_\beta = V_\beta : V_\alpha = \frac{(292)^3}{2} : \frac{(3.68)^2}{4}$$

$$= 12.448 : 12.459 = 1 : 1$$

68. (c) $\therefore K_b = \frac{RT_b^2 M_1}{\Delta H_{vap}} = \frac{8.314 \times (373)^2 \times 0.0180}{40585}$

$$= 0.513 \text{ K kg/mol}$$

Now, molecular weight of $\text{Al}_2(\text{SO}_4)_3 = 342$

$$i = 1 - \alpha + 2\alpha + 3\alpha = 1 + 4\alpha \Rightarrow i = 5 \quad (\because \alpha = 1)$$

$$\Delta T_b = i \times K_b \cdot m$$

$$= 5 \times 0.513 \times \frac{5.6}{342 \times 1} = 0.042$$

$$\text{Boiling point of solution} = 100 + 0.042 = 100.042^\circ\text{C}$$

69. (d)

70. (b) Phenol on reaction with chloroform and KOH gives salicylaldehyde, which with 50% KOH solution undergoes Cannizzaro's reaction.

71. (d) Some complex ions of nitrogen show similarities with halide ions. These are called pseudohalide ions e.g., OCN^- , NCO^- , CN^- etc.

Halogens, among themselves, form complex ions which are called polyhalide ions. e.g., I_3^- , BrI_2^- etc.

Similarly, interhalogens are the compounds of halogens in which one halogen is cation and other halogen is anion. e.g., IF_7 , ICl_5 , BrF_5 , IF_5 etc.

72. (b) The inorganic halide (A) is SO_2Cl_2 .

73. (d) In alkali metals, reactivity increases down the group as electropositivity increases but for halogens reactivity decreases down the group as molecular stability of halogens increases.

74. (b) IUPAC name of sodiumnitroprusside $\text{Na}_2[\text{Fe}(\text{CN})_5\text{NO}]$ is sodiumpentacyanonitrosyl ferrate (III) because in it NO is neutral ligand and the oxidation number of Fe is III.

75. (d) $\text{A(g)} \longrightarrow \text{P(g)} + \text{Q(g)} + \text{R(g)}$

$$\text{At } t = 0, \quad 0.4 \text{ atm} \quad 0 \quad 0 \quad 0$$

$$\text{At time } = t, \quad 0.4 - x \quad x \quad x \quad x$$

$$P_t = 0.4 - x + x + x + x = 0.4 + 2x \text{ or } x = \frac{P_t - 0.4}{2}$$

$$P_A = P_0 - x = P_0 - \frac{P_t - 0.4}{2} = \frac{2 \times 0.4 - P_t + 0.4}{2} = \frac{1.2 - P_t}{2}$$

$$\text{From,} \quad k = \frac{2.303}{t} \log \frac{P_0}{P_A}$$

$$\frac{0.693}{t_{1/2}} = \frac{2.303}{230} \log \left(\frac{0.4 \times 2}{1.2 - P_t} \right)$$

$$\frac{0.693}{t_{1/2}} = \frac{2.303}{230} \log \left(\frac{0.8}{1.2 - P_t} \right)$$

$$\log \frac{0.8}{1.2 - P_t} = \frac{0.693 \times 230}{69.3 \times 2.303} = 0.9987$$

$$\frac{0.8}{1.2 - P_t} = 10^{0.9987}$$

$$0.8 = (10)(1.2 - P_t)$$

$$0.8 = 12 - 10P_t$$

$$10P_t = 12 - 0.8$$

$$10P_t = 11.2$$

$$P_t = \frac{11.2}{10} = 1.12 \text{ atm}$$

76. (d) The structure of an important antipyretic paracetamol is

So *p*-amino phenol gives paracetamol an acylation.

77. (b) On passing H_2S gas in the aqueous solution of salt in the presence of dilute HCl, black ppt of CuS is formed.

Note In a reaction (redox/neutralisation) number of equivalents of different reactants are same.

Equivalents of $\text{C}_2\text{O}_4^{2-}$ = Equivalents of MnO_4^-

$$\text{Equivalent weight of } \text{C}_2\text{O}_4^{2-} = \frac{\text{Molecular weight}}{2}$$

$$\therefore \text{Molarity} = 2 \times \text{Normality}$$

$$\text{Equivalent weight of } \text{MnO}_4^- = \frac{\text{Molecular weight}}{5}$$

$$\text{Molarity} = 5 \times \text{Normality}$$

$$\text{Number of equivalents of } \text{MnO}_4^- = \frac{28.85 \times 5 M_1}{1000}$$

$$\text{Number of equivalents of } \text{Na}_2\text{C}_2\text{O}_4 = \frac{0.1467}{67}$$

$$\therefore \frac{28.85 \times 5 M_1}{1000} = \frac{0.1467}{67}$$

$$M_1 = 0.01518 \text{ M}$$

Config. of Cr (24) = $3d^5 4s^1$

Config. $\text{Cr}^{3+} = 3d^3 4s^0$

Thus option (d) is correct.

(a) d^2sp^3 hybridisation, octahedral. Thus, option (a) is correct.

(b) here are three unpaired electrons, hence it is paramagnetic. Thus, option (b) is correct.

So the incorrect/... statement is (c)

(c) d^2sp^3 inner orbital complex. Thus option (c) is as incorrect.

(d) Due to ionisable Cl^- ions, white ppt with AgNO_3 . Thus, option (d) is correct

So, the incorrect statement is (c).

Here, $K_{a_2} < K_{a_1}$ because the negatively charged HSO_4^- ion has much less tendency to donate a proton to H_2O as compared to neutral H_2SO_4 .

English Proficiency

81. (b) The article 'the' should be used before 'famous' as the sentence refers to a particular thing i.e. a famous monument.

82. (b) As the sentence refers to a choice among more than two persons (servants), 'which' will be used in place of 'who'.

83. (c) The sentence is incomplete as it does not answer the question 'helped whom?' So, we add 'him' at the end of the sentence.

84. (a) Use of preposition 'with' is suitable to fill the given blank.

85. (b) Use of preposition 'at' is suitable to fill the given blank.

86. (c) 'Benign' means not likely to cause death. 'Fatal' would be its opposite.

87. (b) 'Noted' is known by many people because of particular qualities. Its opposite would be unknown.

88. (a) 'Sagacious' means having or showing understanding and the ability to make good judgements. So, 'Foolish' would be its correct antonym.

89. (a) Getting peevish means to get irritated.

90. (c) 'Roughed out' is a phrasal verb means to draw a 'rough draft'. So, 'drew a quick plan' is its correct synonym.

91. (b) The need for an effective population policy is an urgent necessity in the country's planning strategy. Hence, option (b) is the correct answer.

92. (d) The development of human resource and the building up of an institutional framework would have to receive priority attention.

93. (c) The Centre and the States government must become partners in the planning process to determine national priorities together. Hence, the statement given in option (c) is not correct.

94. (b) Domestic economic situation and world trends would force the planning process to undergo a change.

95. (c) Important changes in the international scene is implied by the expression 'momentous trends.'

Logical Reasoning

96. (d) The pattern is as follows

$$2 \times 6 = 12$$

$$6 \times 12 = 72$$

$$12 \times 72 = 864 \neq 865$$

$$72 \times 864 = 62208$$

Hence, number 865 is wrong and should be replaced by 864

97. (c) According to the question,

$$A/Q > T > P/B$$

But P is not the shortest

$$A/Q > T > P > B$$

So, tallest is either A or Q.

98. (c) Option figure (c) will complete the given pattern as

99. (d) 'Spanner' is used by mechanic as a tool to loose or tight nut and bolt. In the same way, 'saw' is used by carpenter as a tool to cut wood. Hence, option (d) is correct.

Total 18 rectangles are as follow

ABQP, PQNO, BCDN,
NDEM, MEFL, LFJK,
FGHR, RHIJ, ABNO,
BCEM, NDFL, MEJK,
FGIJ, ACDO, BCFL,
NDJK, LGIK and BCJK

101. (d) As, $B \xrightarrow{-1} A \xrightarrow{+3} D \xrightarrow{-1} C$
 $J \xrightarrow{-1} I \xrightarrow{+3} L \xrightarrow{-1} K$
 $N \xrightarrow{-1} M \xrightarrow{+3} P \xrightarrow{-1} O$

But, $V \xrightarrow{-1} U \xrightarrow{+2} W \xrightarrow{+1} X$

Except option (d), all others follow same pattern
 $(-1, +3, -1)$.

102. (d) Clearly, there are three types of shadings of circles, one is unshaded another has its right half shaded and yet another has its upper half shaded. Also, two of the figures in each row have one triangle shaded.

103. (c) Option figure (c) can be formed from the cut out pieces given in question figure.

104. (b) After unfolding the folded and cut piece of paper it will look like as answer figure (b).

So, Option (c) is correct

105. (b)

Mathematics

106. (a) Given that, $A = \{x : x^2 = 1\} = \{-1, 1\}$ and $B = \{x : x^4 = 1\}$
 $= \{-1, 1, -i, i\}$

Now, $A - B = \emptyset$ and $B - A = \{-i, i\}$

$$\therefore A \Delta B = (A - B) \cup (B - A) = \{-i, i\}$$

107. (c) We have, $2f(xy) = (f(x))^y + (f(y))^x$, $x, y \in R$ and $f(1) = a$.

Putting $x = 1, y = 2$, we get

$$2f(2) = (f(1))^2 + f(2) \Rightarrow f(2) = a^2$$

Putting $x = 1, y = 3$, we get

$$2f(3) = (f(1))^3 + f(3) \Rightarrow f(3) = a^3, \text{ and so on.}$$

$$\therefore f(n) = a^n$$

$$\sum_{i=1}^n f(i) = a + a^2 + \dots + a^n = \frac{a(a^n - 1)}{a - 1}.$$

108. (c) The given inequality is equivalent to

$$1 < |x - 3| + |4 - x|$$

$$\text{i.e., } 1 < |x - 3| + |x - 4| \quad \dots(i)$$

For $x < 3$, we have

$$3 - x + 4 - x = 7 - 2x > 1$$

i.e., $x < 3$, which is true in the domain.

For $3 \leq x < 4$, Eq. (i) gives

$$x - 3 + 4 - x = 1 \not> 1 \quad \dots(ii)$$

For $4 \leq x$, we have

$$2x - 7 > 1 \Rightarrow x > 4 \quad \dots(iii)$$

From Eqs. (i) and (iii), we have the solution of the inequality as $x < 3$ or $x > 4$.

i.e., $x \in]-\infty, 3) \cup (4, \infty[$ which is equal to $R - [3, 4]$.

109. (b) $\because 13, a_1, a_2, \dots, a_{20}, 67$ are in AP.

$$\therefore a_1 + a_2 + a_3 + \dots + a_{20} = 20 \left(\frac{13 + 67}{2} \right) = 800$$

Also, $AM > GM$

$$\Rightarrow \frac{a_1 + a_2 + \dots + a_{20}}{20} \geq (a_1 \cdot a_2 \cdot a_3 \cdot \dots \cdot a_{20})^{\frac{1}{20}}$$

$$\Rightarrow 40 \geq (a_1 \cdot a_2 \cdot a_3 \cdot \dots \cdot a_{20})^{\frac{1}{20}}$$

Hence, maximum value of $a_1 \cdot a_2 \cdot a_3 \cdot \dots \cdot a_{20}$ is $(40)^{20}$.

110. (a) Since, p, q and r are positive and are in AP.

$$\therefore q = \frac{p+r}{2} \quad \dots(i)$$

$\therefore$ The roots of the equation, $px^2 + qx + r = 0$ are real.

$$\Rightarrow q^2 \geq 4pr \Rightarrow \left[\frac{p+r}{2} \right]^2 \geq 4pr \quad [\text{from Eq. (i)}]$$

$$\Rightarrow p^2 + r^2 - 14pr \geq 0$$

$$\Rightarrow \left(\frac{r}{p} \right)^2 - 14 \left(\frac{r}{p} \right) + 1 \geq 0 \quad (\because p > 0)$$

$$\Rightarrow \left(\frac{r}{p} - 7 \right)^2 - 48 \geq 0$$

$$\Rightarrow \left(\frac{r}{p} - 7 \right)^2 - (4\sqrt{3})^2 \geq 0 \Rightarrow \left| \frac{r}{p} - 7 \right| \geq 4\sqrt{3}$$

$$\begin{aligned} 111. (c) \quad {}^{47}C_4 + \sum_{r=1}^5 {}^{52-r}C_3 &= {}^{47}C_4 + {}^{51}C_3 \\ &\quad + {}^{50}C_3 + {}^{49}C_3 + {}^{48}C_3 + {}^{47}C_3 \\ &= {}^{51}C_3 + {}^{50}C_3 + {}^{49}C_3 + {}^{48}C_3 + ({}^{47}C_3 + {}^{47}C_4) = {}^{52}C_4 \end{aligned}$$

112. (a) Possible even digits are 2, 4, 6, 8, 0.

Case I Number has digits 4, 6, 8, 0.

(Here, sum of digits is 18, divisible by 3)

$$\square \square \square \square$$

Number of arrangements = $3 \times 3!$

[1st place can be filled using 4, 6, 8]

$$= 3 \times 6 = 18$$

Case II Number has digits 2, 4, 6, 0

(Here, sum of digits is 12, divisible by 3)

$$\square \square \square \square$$

1st place cannot be filled by 0.

Number of arrangements = $3 \times 3! = 18$

$\therefore$ Number of numbers = $18 + 18 = 36$

113. (d) We know that,

$$n(A \cup B) = n(A) + n(B) - n(A \cap B)$$

$$\therefore P = 1500 - n(A \cap B)$$

$$\Rightarrow n(A \cap B) = 1500 - P$$

Clearly, $1 \leq n(A \cap B) \leq 500$

$$\Rightarrow 1 \leq 1500 - P \leq 500$$

$$\Rightarrow -1499 \leq -P \leq -1000$$

$$\Rightarrow 1000 \leq P \leq 1499$$

114. (c) Here, $\frac{2x-1}{x^3+4x^2+3x} \in R$ only when $x^3 + 4x^2 + 3x \neq 0$

$$\Rightarrow x(x^2 + 4x + 3) = 0$$

$$\Rightarrow x(x+1)(x+3) = 0$$

$$\Rightarrow x = 0, -1, -3$$

$$\therefore \left\{ x \in R : \frac{2x-1}{x^3+4x^2+3x} \in R \right\} \\ = R - \{0, -1, -3\}$$

115. (a) Let $f(x) = Ax^2 + Bx + C$

$$\therefore f(1) = A + B + C$$

$$\text{and } f(-1) = A - B + C$$

$$\therefore f(1) = f(-1)$$

$$\Rightarrow A + B + C = A - B + C$$

$$\Rightarrow 2B = 0 \Rightarrow B = 0$$

$$\therefore f(x) = Ax^2 + C$$

$$\Rightarrow f'(x) = 2Ax$$

$$\Rightarrow f'(a) = 2Aa$$

$$f'(b) = 2Ab \text{ and } f'(c) = 2Ac$$

Also, a, b, c are in APSo, $2Aa, 2Ab$ and $2Ac$ are in AP. $\Rightarrow f'(a), f'(b)$ and $f'(c)$ are also in AP.

$$116. (c) \lim_{n \rightarrow \infty} \frac{1}{n} \left\{ \frac{1}{n+1} + \frac{2}{n+2} + \dots + \frac{3n}{n+3n} \right\}$$

$$= \lim_{n \rightarrow \infty} \sum_{r=1}^{3n} \frac{1}{n} \left(\frac{r}{n+r} \right) = \int_0^3 \frac{x}{1+x} dx$$

$$= \int_0^3 \left(1 - \frac{1}{1+x} \right) dx$$

$$= [x - \log(1+x)]_0^3$$

$$= 3 - \log 4 = 3 - 2 \log 2$$

117. (b) We have,

$$(x-1)(x-2)(x-3) \dots (x-10)$$

Coefficient of x^8 = Sum of the terms taken two at a time i.e.,

$$\sum_{1 \leq i < j \leq 10} x_i \cdot x_j = \frac{1}{2} \left[\left(\sum_{i=1}^{10} x_i \right)^2 - \left(\sum_{i=1}^{10} x_i^2 \right) \right]$$

$$= \frac{1}{2} [(1+2+3+\dots+10)^2 - (1^2+2^2+3^2+\dots+10^2)]$$

$$= \frac{1}{2} \left[\left(\frac{10 \times 11}{2} \right)^2 - \left(\frac{10 \times 11 \times 21}{6} \right) \right]$$

$$= \frac{1}{2} ((55)^2 - 385) = \frac{1}{2} (3025 - 385) = \frac{2640}{2} = 1320$$

118. (b) We have, $Z = \frac{7+i}{3+4i}$

$$\Rightarrow Z = \left(\frac{7+i}{3+4i} \right) \left(\frac{3-4i}{3-4i} \right) = \frac{21+4-28i+3i}{9+16} = 1-i$$

$$\therefore Z^{14} = (1-i)^{14} = [(1-i)^2]^7 = (1-1-2i)^7$$

$$= (-2)^7 (i)^7 = 2^7 i$$

119. (c) We have, $\frac{dy}{dx} + \frac{\tan y}{x} = \frac{\tan y \sin y}{x^2}$ Now, divide by $\tan y \sin y$ both sides, we get

$$\cot y \operatorname{cosec} y \frac{dy}{dx} + \frac{\operatorname{cosec} y}{x} = \frac{1}{x^2} \quad \dots(i)$$

Put $\operatorname{cosec} y = z$

$$\therefore -\operatorname{cosec} y \cot y \frac{dy}{dx} = \frac{dz}{dx}$$

 $\therefore$ Eq. (i) reduces to

$$\frac{dz}{dx} - \frac{z}{x} = -\frac{1}{x^2}$$

$$\text{IF} = e^{\int -\frac{1}{x} dx} = e^{-\log x} = \frac{1}{x}$$

Hence solution is

$$\frac{z}{x} = \int -\frac{1}{x^3} dx = \frac{1}{2x^2} + c$$

$$\Rightarrow \frac{1}{x \sin y} = \frac{1-2cx^2}{2x^2}$$

$$\Rightarrow 2x = \sin y(1-2cx^2)^2$$

$$\Rightarrow 2x = \sin y(1-2cx^2)$$

120. (a) We have,

$$I = \int_0^{\frac{\pi}{2}} \frac{dx}{\tan x + \cot x + \operatorname{cosec} x + \sec x}$$

$$\Rightarrow I = \int_0^{\frac{\pi}{2}} \frac{dx}{\frac{\sin x}{\cos x} + \frac{\cos x}{\sin x} + \frac{1}{\sin x} + \frac{1}{\cos x}}$$

$$\Rightarrow I = \int_0^{\frac{\pi}{2}} \frac{\sin x \cos x dx}{1 + \sin x + \cos x}$$

$$\Rightarrow I = \int_0^{\frac{\pi}{2}} \frac{2 \sin \frac{x}{2} \cos \frac{x}{2} \left(\cos^2 \frac{x}{2} - \sin^2 \frac{x}{2} \right)}{2 \cos^2 \frac{x}{2} + 2 \sin \frac{x}{2} \cos \frac{x}{2}} dx$$

$$\Rightarrow I = \int_0^{\frac{\pi}{2}} \sin \frac{x}{2} \left(\cos \frac{x}{2} - \sin \frac{x}{2} \right) dx$$

$$\Rightarrow I = \frac{1}{2} \int_0^{\frac{\pi}{2}} (\sin x + \cos x - 1) dx$$

$$\Rightarrow I = \frac{1}{2} [-\cos x + \sin x - x]_0^{\pi/2}$$

$$\Rightarrow I = \frac{1}{2} \left[\left(-\cos \frac{\pi}{2} + \sin \frac{\pi}{2} - \frac{\pi}{2} \right) - (-\cos 0 + \sin 0 - 0) \right]$$

$$\Rightarrow I = \frac{1}{2} \left[0 + 1 - \frac{\pi}{2} + 1 \right] = 1 - \frac{\pi}{4}$$

121. (d) We have given,

$$|a| = 1, |b| = 4, a \cdot b = 2$$

Now, $c = (2a \times b) - 3b$ Multiplying by b both sides, we get

$$\begin{aligned}
 b \cdot c &= (2a \times b) \cdot b - 3|b|^2 \\
 \Rightarrow b \cdot c &= 0 - 3(4)^2 = -48 \\
 \text{and } |c|^2 &= |(2a \times b) \cdot 3b|^2 \\
 |c|^2 &= (2a \times b)^2 + 9|b|^2 = 4(a \times b)^2 + 9(4)^2 \\
 \Rightarrow |c|^2 &= 4(|a|^2 \cdot |b|^2 - (a \cdot b)^2) + 144 \\
 &= 4(16 - 4) + 144 = 48 + 144 = 192 \\
 \therefore b \cdot c &= |b||c|\cos\theta \\
 \Rightarrow \cos\theta &= \frac{b \cdot c}{|b||c|} = \frac{-48}{4 \times \sqrt{192}} = -\frac{\sqrt{3}}{2} \\
 \theta &= \pi - \frac{\pi}{6} = \frac{5\pi}{6}
 \end{aligned}$$

122. (a) We have,

$$x^2 - (k-2)x + (k^2 + 3k + 5) = 0$$

x_1, x_2 are roots of equations

$$\therefore x_1 + x_2 = k - 2, x_1 x_2 = k^2 + 3k + 5$$

$$\begin{aligned}
 x_1^2 + x_2^2 &= (x_1 + x_2)^2 - 2x_1 x_2 \\
 &= (k-2)^2 - 2(k^2 + 3k + 5) \\
 &= k^2 - 4k + 4 - 2k^2 - 6k - 10 \\
 &= -(k^2 + 10k + 6) \\
 &= -[(k+5)^2 - 19] \\
 &= 19 - (k+5)^2 \leq 19
 \end{aligned}$$

$\therefore$ Maximum value of $x_1^2 + x_2^2 = 19$

123. (c) Graph of circle whose centre is origin and radius is π units and $y = \sin x$ is

$$\begin{aligned}
 \text{Area of shaded region} &= \frac{1}{2} \text{ Area of circle} \\
 &= \frac{1}{2} (\pi r^2) = \frac{1}{2} \pi (\pi^2) \quad [\because r = \pi] \\
 &= \frac{\pi^3}{2}
 \end{aligned}$$

124. (a) The given equation is

$$\begin{aligned}
 2(1+i)x^2 - 4(2-i)x - 5 - 3i &= 0 \\
 \Rightarrow x &= \frac{4(2-i) \pm \sqrt{16(2-i)^2 + 8(1+i)(5+3i)}}{4(1+i)}
 \end{aligned}$$

$$= -\frac{i}{1+i} \text{ or } \frac{4-i}{1+i} = \frac{-1-i}{2} \text{ or } \frac{3-5i}{2}$$

$$\text{Now, } \left| \frac{-1-i}{2} \right| = \sqrt{\frac{1}{4} + \frac{1}{4}} = \sqrt{\frac{1}{2}}$$

$$\text{and } \left| \frac{3-5i}{2} \right| = \sqrt{\frac{9}{4} + \frac{25}{4}} = \sqrt{\frac{17}{2}}$$

$$\text{Also, } \sqrt{\frac{17}{2}} > \sqrt{\frac{1}{2}}$$

Hence, required root is $\frac{3-5i}{2}$.

125. (d) For real roots, discriminant,

$$D = b^2 - 4ac \geq 0$$

$$= \cos^2 \beta - 4(\cos \beta - 1) \sin \beta \geq 0$$

$$= \cos^2 \beta + 4(1 - \cos \beta) \sin \beta \geq 0$$

So, $\sin \beta$ should be > 0 . [$\because \cos^2 \beta \geq 0, 1 - \cos \beta \geq 0$]

$$\Rightarrow \beta \in (0, \pi)$$

126. (c) We have,

$$(1+\alpha)x + \beta y + z = 2$$

$$\alpha x + (1+\beta)y + z = 3$$

$$\alpha x + \beta y + 2z = 2$$

$$\text{For unique solution } \begin{vmatrix} 1+\alpha & \beta & 1 \\ \alpha & 1+\beta & 1 \\ \alpha & \beta & 2 \end{vmatrix} \neq 0$$

Apply $R_1 \rightarrow R_1 - R_2$ and $R_2 \rightarrow R_2 - R_3$, we get

$$\begin{vmatrix} 1 & -1 & 0 \\ 0 & 1 & -1 \\ \alpha & \beta & 2 \end{vmatrix} \neq 0$$

Expanding along R_1 , we get

$$\begin{aligned}
 1(2+\beta) + 1(0+\alpha) &\neq 0 \\
 &= \alpha + \beta + 2 \neq 0
 \end{aligned}$$

Only option (c) satisfied above equation.

127. (d) Let $AB = h =$ height of vertical pole

$OA = x =$ Horizontal distance from O to pole

In $\triangle OAB$

$$\tan 45^\circ = \frac{AB}{OA} = 1 = \frac{20}{x} \Rightarrow x = 20 \text{ m}$$

In $\triangle OPQ$

$$\tan 30^\circ = \frac{PQ}{OP} \Rightarrow \frac{1}{\sqrt{3}} = \frac{20}{x+y}$$

$$\Rightarrow x + y = 20\sqrt{3}$$

$$\Rightarrow y = 20\sqrt{3} - x = 20\sqrt{3} - 20 = 20(\sqrt{3} - 1)$$

$\therefore$ Speed of bird is $20(\sqrt{3} - 1)$ m/s.

128. (b) Since, $g = \sqrt{ab}$. Also, a, p, q and b are in AP.

So, common difference d is $\frac{b-a}{3}$.

$$\therefore p = a + d = a + \frac{b-a}{3} = \frac{2a+b}{3}$$

$$q = b - d = b - \frac{b-a}{3} = \frac{a+2b}{3}$$

Now, $(2p - q)(p - 2q)$

$$= \frac{(4a + 2b - a - 2b)}{3} \cdot \frac{(2a + b - 2a - 4b)}{3}$$

$$= -ab = -g^2$$

129. (b) Let $f(x) = x^{100}$

$$g(x) = x^2 - 3x + 2$$

$q(x)$ = quotient

$r(x)$ = remainder $= (ax + b)$

$$\therefore f(x) = g(x)q(x) + r(x)$$

$$x^{100} = (x^2 - 3x + 2)q(x) + ax + b$$

$$\text{Put } x = 1 \Rightarrow 1 = a + b$$

$$\text{Put } x = 2 \Rightarrow 2^{100} = 2a + b$$

From Eqs. (i) and (ii), we get

$$a = 2^{100} - 1, b = 2 - 2^{100}$$

$$\text{Remainder} = (2^{100} - 1)x + (2 - 2^{100})$$

$$= (2^{99+1} - 1)x - (2^{99} - 1)$$

$$\therefore k = 99$$

130. (a) Let two observations be x and y .

$$\therefore \text{Mean} = \frac{1 + 3 + 8 + x + y}{5} = \frac{12 + x + y}{5}$$

$$\Rightarrow 5 = \frac{x + y + 12}{5} \Rightarrow x + y = 13$$

$$\text{Now, variance} = \frac{\sum x_i^2}{n} - (\bar{x})^2$$

$$\Rightarrow 9.20 = \frac{1^2 + 3^2 + 8^2 + x^2 + y^2}{5} - 25$$

$$\Rightarrow 46 = 74 + x^2 + y^2 - 125$$

$$\Rightarrow x^2 + y^2 = 97$$

From Eqs. (i) and (ii), we get

$$(x + y)^2 - 2xy = 97$$

$$\Rightarrow (13)^2 - 2xy = 97$$

$$\Rightarrow 2xy = 169 - 97 = 72$$

$$\Rightarrow xy = 36$$

$$\therefore x : y = 4 : 9$$

131. (b) Let the three digit number be abc

Given middle digit is A.M of first and last

$$\therefore b = \frac{a+c}{2} \Rightarrow 2b = a + c$$

$2b$ is an even

$\therefore a$ and c should be both even or both odd

$$\therefore \text{Total number of ways} = {}^5C_1 \times {}^5C_1 + {}^4C_1 \times {}^5C_1 \\ = 5 \times 5 + 4 \times 5 = 25 + 20 = 45$$

132. (b) We have,

$$Z = re^{i\theta}$$

$$Z = r(\cos \theta + i \sin \theta)$$

$$e^{iz} = e^{ir(\cos \theta + i \sin \theta)}$$

$$\Rightarrow e^{iz} = e^{ir \cos \theta + i^2 r \sin \theta}$$

$$\Rightarrow e^{iz} = e^{ir \cos \theta - r \sin \theta}$$

$$\Rightarrow e^{iz} = e^{-r \sin \theta} \cdot e^{ir \cos \theta}$$

$$\therefore \arg(e^{iz}) = r \cos \theta$$

133. (d) Coefficient of x^{10} in $(x + x^2 + \dots + x^6)^4$

$$= \text{Coefficient of } x^6 \text{ in } (1 + x + \dots + x^5)^4$$

...(i)

...(ii)

$$= (1 - x^6)^4 (1 - x)^{-4} \text{ in } (1 - 4x^6 + \dots) \left[1 + \binom{4}{1}x + \dots \right]$$

$$\text{Hence, coefficient of } x^6 \text{ is } \binom{9}{6} - 4 = 80.$$

134. (b) A line passing through $(1, 2)$ and parallel to the line $3x - y = 10$ is

$$3(x - 1) - (y - 2) = 0$$

...(i)

...(ii)

$$\Rightarrow 3x - 3 - y + 2 = 0 \Rightarrow 3x - y - 1 = 0$$

The intersection point of line

$$x + y + 5 = 0$$

...(i)

and

$$3x - y - 1 = 0$$

...(ii)

are $(-1, -4)$

$\therefore$ Distance from the line $x + y + 5$ to the point $(1, 2)$ measured parallel to the line $3x - y = 10$ is

$$\sqrt{(-1-1)^2 + (-4-2)^2}$$

$$\sqrt{4+36} = \sqrt{40} = 2\sqrt{10}$$

135. (d) We have,

$$f(x) = a_0 + a_1x^2 + a_2x^4 + a_3x^6 + \dots + a_nx^{2n}$$

$$f'(x) = 2a_1x + 4a_2x^3 + 6a_3x^5 + \dots + 2na_nx^{2n-1}$$

$$f'(x) = 2x(a_1 + 2a_2x^2 + 3a_3x^4 + \dots + na_nx^{2n-2})$$

For maxima or minima

$$\text{Put } f'(x) = 0 \Rightarrow x = 0$$

$$f''(x) = 2(a_1 + 6a_2x^2 + 15a_3x^4 + \dots + n(2n-1)a_nx^{2n-2})$$

$$(f''(x))_{x=0} = 2a_1 > 0$$

$\therefore f(x)$ has only one minima at $x = 0$.

136. (c) We have,

$$f(x) = 2x^3 + x^4 + \log x$$

Put $f(x) = 3$, we get

$$x = 1$$

$$\therefore f(1) = 3 \Rightarrow 1 = f^{-1}(3)$$

Now, given g is the inverse of f

$$\therefore g(x) = f^{-1}(x) \Rightarrow f(g(x)) = x$$

Differentiating with respect to x , we get

$$f'(g(x)) \cdot g'(x) = 1$$

$$g'(x) = \frac{1}{f'(g(x))}$$

$$g'(x) = \frac{1}{(g(x))^2 + 4(g(x))^3 + \frac{1}{g(x)}} \left[\because f'(x) = 6x^2 + 4x^3 + \frac{1}{x} \right]$$

$$g'(3) = \frac{1}{6(g(3))^2 + 4(g(3))^3 + \frac{1}{g(3)}}$$

$$g'(3) = \frac{1}{6+4+1} \quad [\because g(3) = f^{-1}(3) = 1]$$

$$g'(3) = \frac{1}{11}$$

137. (d) We have $P(3, 7, 1)$ and $R(2, 5, 7)$

DR's of $PR = (-1, -2, 6)$

Angle between line PQ and plane is

$$\sin \theta = \frac{(-1)(3) + (-2) \times 2 + 6 \times 11}{\sqrt{1+4+36} \sqrt{9+4+121}}$$

$$PM = \left| \frac{3(3) + 2(7) + 11(\times 1) - 9}{\sqrt{9+4+121}} \right|$$

$$= \left| \frac{9+14+11-9}{\sqrt{134}} \right| = \frac{25}{\sqrt{134}}$$

$$\sin \theta = \frac{PM}{PQ}$$

$$\Rightarrow PQ = \frac{PM}{\sin \theta} = \frac{25}{\sqrt{134}} \times \frac{\sqrt{41} \times \sqrt{134}}{59} = \frac{25\sqrt{41}}{59}$$

138. (a) We have,

$$I = \int \frac{8x^{43} + 13x^{38}}{(x^{13} + x^5 + 1)^4} dx$$

$$= \int \frac{8x^{43} + 13x^{38}}{x^{52} \left(1 + \frac{1}{x^8} + \frac{1}{x^{13}} \right)^4} dx$$

$$= \int \frac{8 \left(\frac{1}{x^9} \right) + 13 \left(\frac{1}{x^{14}} \right)}{\left(1 + \frac{1}{x^8} + \frac{1}{x^{13}} \right)^4} dx$$

$$\text{Put, } 1 + \frac{1}{x^8} + \frac{1}{x^{13}} = t$$

$$\Rightarrow \left(-\frac{8}{x^9} - \frac{13}{x^{14}} \right) dx = dt$$

$$\therefore I = - \int \frac{dt}{t^4} = \frac{1}{3t^3} + C$$

$$\Rightarrow I = \frac{1}{3 \left(1 + \frac{1}{x^8} + \frac{1}{x^{13}} \right)^3} + C = \frac{x^{39}}{3(x^{13} + x^5 + 1)^3} + C$$

139. (b) We have,

Vector r is coplanar with vector a and b

$$\therefore r = \lambda(b \times (a \times b))$$

$$\Rightarrow r = \lambda((b \cdot b)a - (b \cdot a)b)$$

$$\Rightarrow r = \lambda(|b|^2 a - (a \cdot b)b)$$

$$\Rightarrow r = \lambda[5a + b] \quad [\because |b| = \sqrt{2^2 + 1^2} = \sqrt{5}]$$

$$\text{and } a \cdot b = (-\hat{i} + \hat{j} + \hat{k}) \cdot (2\hat{i} + \hat{k}) = -1$$

$$\text{Given, } r \cdot a = 7$$

$$\therefore \lambda(5a + b) \cdot a = 7$$

$$\Rightarrow \lambda[5|a|^2 + a \cdot b] = 7$$

$$\Rightarrow \lambda[15 - 1] = 7 \quad [\because |a|^2 = 1 + 1 + 1 = 3]$$

$$\Rightarrow \lambda = \frac{1}{2}$$

$$\therefore r = \frac{1}{2}(5a + b)$$

$$r = \frac{1}{2}(-5\hat{i} + 5\hat{j} + 5\hat{k} + 2\hat{i} + \hat{k})$$

$$\mathbf{r} = \frac{-3}{2} \hat{\mathbf{i}} + \frac{5}{2} \hat{\mathbf{j}} + \frac{6}{2} \hat{\mathbf{k}}$$

$$z \text{ component of } \mathbf{r} = \frac{6}{2} = 3$$

140. (b) Since x, y, z are three consecutive integers

$$\therefore 2y = x + z$$

$$\Rightarrow (4y^2) = (x + z)^2$$

$$= (x - z)^2 + 4xz$$

$$= (-2)^2 + 4xz \quad [\because x - z = -2]$$

$$\Rightarrow 4y^2 = 4 + 4xz$$

$$\Rightarrow y^2 = 1 + xz$$

Now,

$$\frac{1}{2} \log_e x + \frac{1}{2} \log_e z + \frac{1}{2zx+1} + \frac{1}{3(2xz+1)^3} + \dots$$

$$= \frac{1}{2} \left[\log_e (xz) + 2 \left(\frac{1}{2zx+1} + \frac{1}{3} \cdot \frac{1}{(2zx+1)^3} + \dots \right) \right]$$

$$= \frac{1}{2} \left[\log_e (xz) + \log_e \left(\frac{1 + \frac{1}{2zx+1}}{1 - \frac{1}{2zx+1}} \right) \right]$$

$$= \frac{1}{2} \left[\log_e (xz) + \log_e \left(\frac{1+xz}{xz} \right) \right]$$

$$= \frac{1}{2} [\log_e (1+xz)] = \frac{1}{2} [\log_e (y)^2] = \log_e (y)$$

141. (a) We have, $(xy^5 + 2y) dx = x dy$

$$\Rightarrow x \frac{dy}{dx} - 2y = xy^5$$

$$\Rightarrow \frac{dy}{dx} - \frac{2y}{x} = y^5$$

$$\Rightarrow y^{-5} \frac{dy}{dx} - \frac{2y^{-4}}{x} = 1$$

$$\text{Put, } y^{-4} = t$$

$$\Rightarrow -4y^{-5} \frac{dy}{dx} = \frac{dt}{dx}$$

$$\Rightarrow y^{-5} \frac{dy}{dx} = \frac{-1}{4} \frac{dt}{dx}$$

From Eqs. (i) and (ii), we get

$$-\frac{1}{4} \frac{dt}{dx} - \frac{2t}{x} = 1$$

$$\Rightarrow \frac{dt}{dx} + \frac{8t}{x} = -4$$

$$\text{Now, IF} = e^{\int \frac{8}{x} dx} = e^{8 \log x} = x^8$$

and the solution is

$$t \cdot x^8 = \int (-4)x^8 dx + C$$

$$\Rightarrow \frac{x^8}{y^4} = -\frac{4 \cdot x^9}{9} + C$$

$$\Rightarrow 9x^8 + 4x^9 \cdot y^4 = 9y^4 C$$

$$142. (b) \text{ Given, } \frac{|x-2|-1}{|x-2|-2} \leq 0$$

$$\text{Let } |x-2| = k$$

Then, given equation,

$$\frac{k-1}{k-2} \leq 0 \Rightarrow \frac{(k-1)(k-2)}{(k-2)^2} \leq 0$$

$$\Rightarrow (k-1)(k-2) \leq 0 \Rightarrow 1 \leq k \leq 2$$

$$\Rightarrow 1 \leq |x-2| \leq 2$$

Case I When $1 \leq |x-2|$

$$\Rightarrow |x-2| \geq 1$$

$$\Rightarrow x-2 \geq 1 \text{ or } x-2 \leq -1$$

$$\Rightarrow x \geq 3 \text{ and } x \leq 1$$

...(i)

Case II When $|x-2| \leq 2$

$$\Rightarrow -2 \leq x-2 \leq 2$$

$$\Rightarrow -2+2 \leq x \leq 2+2$$

$$\Rightarrow 0 \leq x \leq 4$$

...(ii)

From Eqs. (i) and (ii), $x \in [0, 1] \cup [3, 4]$

$$143. (b) \text{ We have, } f(x) = \frac{x}{\sqrt{1+x^2}}$$

$$\Rightarrow f(f(x)) = \frac{f(x)}{\sqrt{1+(f(x))^2}} = \frac{\frac{x}{\sqrt{1+x^2}}}{\sqrt{1+\frac{x^2}{1+x^2}}} = \frac{x}{\sqrt{1+2x^2}}$$

$$\text{Similarly, } f(f(f(x))) = \frac{x}{\sqrt{1+3x^2}}$$

$$\underbrace{f \circ f \circ \dots \circ f}_{n \text{ times}}(x) = \frac{x}{\sqrt{1+nx^2}} = \frac{x}{\sqrt{1+\left(\sum_{r=1}^n 1\right)x^2}}$$

144. (b) We have,

$$\log_5 \left(\frac{a+b}{3} \right) = \frac{\log_5 a + \log_5 b}{2}$$

$$\Rightarrow 2 \log_5 \left(\frac{a+b}{3} \right) = \log_5 ab$$

$$\Rightarrow \log_5 \left(\frac{a+b}{3} \right)^2 = \log_5 ab$$

$$\Rightarrow \frac{(a+b)^2}{9} = ab$$

$$\Rightarrow (a+b)^2 = 9ab$$

$$\Rightarrow a^2 + b^2 = 7ab$$

$$\Rightarrow \frac{a}{b} + \frac{b}{a} = 7$$

$$\Rightarrow \left(\frac{a}{b} + \frac{b}{a} \right)^2 = 49$$

$$\Rightarrow \frac{a^2}{b^2} + \frac{b^2}{a^2} + 2 = 49$$

$$\Rightarrow \frac{a^4 + b^4}{a^2 b^2} = 49 - 2 = 47$$

145. (a) We have,

$$\frac{5}{4} \cos^2 2x + \cos^4 x + \sin^4 x + \cos^6 x + \sin^6 x = 2$$

$$\Rightarrow \frac{5}{4} \cos^2 2x + (\cos^2 x + \sin^2 x)^2 - 2 \sin^2 x \cos^2 x + (\cos^2 x + \sin^2 x)^3 - 3 \sin^2 x \cos^2 x (\sin^2 x + \cos^2 x) = 2$$

$$\Rightarrow \frac{5}{4} \cos^2 2x + 1 - 2 \sin^2 x \cos^2 x + 1 - 3 \sin^2 x \cos^2 x = 2$$

$$\Rightarrow \frac{5}{4} \cos^2 2x - \frac{1}{2} \sin^2 2x - \frac{3}{4} \sin^2 2x = 0$$

$$\Rightarrow \frac{5}{4} (\cos^2 2x - \sin^2 2x) = 0$$

$$\Rightarrow \cos 4x = 0$$

$$\Rightarrow 4x = 2n\pi \pm \frac{\pi}{2}, n \in \mathbb{Z}$$

$$\Rightarrow x = (4n \pm 1) \frac{\pi}{8}, n \in \mathbb{Z}$$

$$\Rightarrow x = \frac{\pi}{8}, \frac{3\pi}{8}, \frac{5\pi}{8}, \frac{7\pi}{8}, \frac{9\pi}{8}, \frac{11\pi}{8}, \frac{13\pi}{8}, \frac{15\pi}{8}$$

So, number of solution = 8

146. (a) Given equation of ellipse

$$16x^2 + 11y^2 = 256 \Rightarrow \frac{x^2}{16} + \frac{11y^2}{256} = 1$$

Equation of tangent of ellipse at $\left(4 \cos \phi, \frac{16}{\sqrt{11}} \sin \phi \right)$ is

$$\frac{4x \cos \phi}{16} + \frac{11 \times 16y}{256 \sqrt{11}} \sin \phi = 1$$

$$\Rightarrow \frac{x \cos \phi}{4} + \frac{\sqrt{11}}{16} \sin \phi y = 1$$

is also a tangent of circle $x^2 + y^2 - 2x = 15$

$$\Rightarrow (x-1)^2 + y^2 = 16$$

radius of circle = 4 and centre = (1, 0)

Now, $\frac{x \cos \phi}{4} + \frac{\sqrt{11}}{16} \sin \phi y = 1$ is tangent of circle

$$\therefore 4 = \left| \frac{\frac{\cos \phi}{4} - 1}{\sqrt{\frac{\cos^2 \phi}{16} + \frac{11}{256} \sin^2 \phi}} \right| \Rightarrow \phi = \pm \frac{\pi}{3}$$

$$\therefore \phi = \frac{\pi}{3}$$

147. (b) Given equation of parabola is

$$x = 4y - y^2$$

$$\Rightarrow y^2 - 4y + 4 = -x + 4$$

$$\Rightarrow (y-2)^2 = -(x-4)$$

$$a = \frac{1}{4}$$

$$\text{Focus} = \left(\frac{15}{4}, 2 \right)$$

Parabola cuts Y-axis of (0, 0) and (0, 4)

Now, equation of tangent at (0, 0) is

$$x = 4y \quad \dots(i)$$

and equation of tangent at (0, 4) is

$$x + 4y = 16 \quad \dots(ii)$$

Solving Eqs. (i) and (ii), we get

$$x = 8, y = 2$$

$\therefore$ Intersection point of tangent is $P(8, 2)$.

Distance from point P to focus S

$$\begin{aligned} \text{Distance} &= \sqrt{\left(8 - \frac{15}{4} \right)^2 + (2 - 2)^2} \\ &= 8 - \frac{15}{4} = \frac{17}{4} \end{aligned}$$

148. (d) We have, $S_{\infty} = \sum_{k=1}^{\infty} \sum_{n=1}^{\infty} \frac{k}{2^{n+k}}$

$$S_{\infty} = \sum_{k=1}^{\infty} \frac{k}{2^k} \cdot \sum_{n=1}^{\infty} \frac{1}{2^n}$$

$$S_{\infty} = \sum_{k=1}^{\infty} \frac{k}{2^k} \left(\frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \dots \right)$$

$$S_{\infty} = \sum_{k=1}^{\infty} \frac{k}{2^k} \left[\frac{1}{2} \left(1 + \frac{1}{2} + \frac{1}{2^2} + \dots \right) \right]$$

$$S_{\infty} = \sum_{k=1}^{\infty} \frac{k}{2^k} \left(\frac{1}{2} \times \frac{1}{1 - \frac{1}{2}} \right) = \sum_{k=1}^{\infty} \frac{k}{2^k}$$

$$S_{\infty} = \frac{1}{2} + \frac{2}{2^2} + \frac{3}{2^3} + \frac{4}{2^4} + \dots \quad \dots(i)$$

$$\frac{1}{2} S_{\infty} = \frac{1}{2^2} + \frac{2}{2^3} + \frac{3}{2^4} + \dots$$

From Eqs. (i) and (ii), we get

$$\frac{1}{2} S_{\infty} = \frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \dots$$

$$\frac{1}{2} S_{\infty} = \frac{1}{2} \left(\frac{1}{1 - \frac{1}{2}} \right)$$

$$\frac{1}{2} S_{\infty} = 1$$

$$S_{\infty} = 2$$

149. (a) We have,

Slope of tangent of the curve is $\frac{(x+1)^2 + y - 3}{x+1}$

$$\therefore \frac{dy}{dx} = \frac{(x+1)^2 + y - 3}{x+1}$$

$$\Rightarrow \frac{dy}{dx} = \frac{(x+1)^2 - 3}{x+1} + \frac{y}{x+1}$$

$$\Rightarrow \frac{dy}{dx} - \frac{y}{x+1} = \frac{(x+1)^2 - 3}{x+1}$$

This is a form of linear differential equations

$$\therefore \text{IF} = e^{\int \frac{-1}{x+1} dx} = e^{\log \frac{1}{1+x}} = \frac{1}{1+x}$$

Solution of given differential equation is

$$\frac{y}{x+1} = \int \frac{(x+1)^2 - 3}{(x+1)^2} dx$$

$$\frac{y}{x+1} = \int \left(1 - \frac{3}{(x+1)^2} \right) dx$$

$$\frac{y}{x+1} = x + \frac{3}{x+1} + c$$

...(ii)

$\therefore$ Curve passes through (2, 0)

$$\therefore 0 = 2 + \frac{3}{3} + c$$

$$\Rightarrow c = -3$$

Hence, equation of curve is

$$\frac{y}{x+1} = x + \frac{3}{x+1} - 3$$

$$y = x^2 + x + 3 - 3x - 3$$

$$y = x^2 - 2x$$

150. (a) We have,

$$A = \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix}$$

We know that, $|A - \lambda I| = 0$

$$\left| \begin{bmatrix} 2 & 1 \\ 1 & 2 \end{bmatrix} - \begin{bmatrix} \lambda & 0 \\ 0 & \lambda \end{bmatrix} \right| = 0$$

$$= \begin{vmatrix} 2-\lambda & 1 \\ 1 & 2-\lambda \end{vmatrix} = 0$$

$$\Rightarrow (2-\lambda)^2 - 1 = 0$$

$$\Rightarrow 4 - 4\lambda + \lambda^2 - 1 = 0$$

$$\Rightarrow \lambda^2 - 4\lambda + 3 = 0$$

$$\therefore A^2 - 4A + 3I = 0$$

Multiply by A^{-1} , we get

$$A - 4I + 3A^{-1} = 0$$

$$\Rightarrow A^{-1} = \frac{-1}{3}A + \frac{4}{3}I$$

$$\therefore \alpha = -\frac{1}{3} \text{ and } \beta = \frac{4}{3}$$

$$\alpha + \beta = -\frac{1}{3} + \frac{4}{3} = \frac{3}{3} = 1$$

Solved Paper 2021 BITSAT

Instructions

- There are 150 questions in all. The number of questions in each part is as given below.

Part I Physics	1-40
Part II Chemistry	41-80
Part III a. English Proficiency	81-95
b. Logical Reasoning	96-105
Part IV Mathematics	106-150
- All questions are multiple choice questions with four options, only one is correct.
- Each correct answer fetches 3 marks while incorrect answer has a penalty of 1 mark.

No. of Questions

PART I

Physics

- An ideal monoatomic gas is taken round the cycle $ABCD$ as shown in the p - V diagram.

The work done during the cycle is

- pV
 - $2pV$
 - $\frac{pV}{2}$
 - zero
- The initial speed of a body of mass 2.0 kg is 5 m/s. A force acts for 4 s in the direction of motion of the body, as shown in force-time graph. The impulse of force is

- 8.50 Ns
- 8 Ns
- 5.5 Ns
- 6 Ns

- For a constant hydraulic stress on an object, the fractional change in the object's volume $\left(\frac{\Delta V}{V}\right)$ and its

bulk modulus B are related as

- $\frac{\Delta V}{V} \propto B$
 - $\frac{\Delta V}{V} \propto B^2$
 - $\frac{\Delta V}{V} \propto \frac{1}{B}$
 - $\frac{\Delta V}{V} \propto \frac{1}{B^2}$
- A shunt is connected in parallel with a galvanometer. Why?
 - To prevent galvanometer from strong current
 - To convert galvanometer into ammeter
 - To increase the range of ammeter
 - All of the above
 - The phase difference between the V_{out} and V_{in} of CE amplifier circuit is
 - 90°
 - 180°
 - 0°
 - 270°
 - If n th division of main scale coincides with $(n+1)$ th division of vernier scale. The least count of the vernier is (Given, one main scale division is equal to a units)
 - $\frac{a+1}{n+1}$
 - $\frac{a}{n}$
 - $\frac{a}{n+1}$
 - $\frac{a+1}{n}$

2 SELF STUDY GUIDE BITSAT

7. A uniform rod AB of length $L = 1\text{ m}$ is sliding along two mutually perpendicular surfaces OP and OQ as shown in figure.

When the rod subtends an angle $\theta = 30^\circ$ with OQ , the end B has a velocity $\sqrt{3}\text{ m/s}$. The velocity of end A at that time is

- a. 1 m/s
b. 0.5 m/s
c. $\sqrt{3}\text{ m/s}$
d. $\frac{1}{\sqrt{3}}\text{ m/s}$
8. A tray of mass (M) 12 kg is supported by a spring as shown in figure.

When the tray is pressed down and released, it executes SHM with a period of 1.5 s . When a block of mass m placed on the tray, the period of SHM changes to 3.0 s . The mass of block is

- a. 36 kg
b. 48 kg
c. 12 kg
d. 24 kg
9. The phasor diagram of a load represents which circuit?

- a. Purely capacitive
b. Purely inductive
c. R - L - C circuit with X_L more than X_C
d. R - L - C circuit with X_L less than X_C
10. The equation of progressive wave is given by $Y = \sin\left[x\left(\frac{t}{5} - \frac{x}{9}\right) + \frac{\pi}{6}\right]\text{ cm}$. Which one of the following is correct?
- a. $v = 5\text{ cm/s}$
b. $\lambda = 18\text{ cm}$
c. $A = 0.04\text{ cm}$
d. $f = 50\text{ Hz}$

11. The property of light used in optical fibre cables is
a. total internal reflection
b. refraction
c. interference
d. polarisation

12. A man walks in a straight line for 5 min with a velocity of 45 m/s . What is the speed with which he has to move in order to comeback to its original position in 1.5 min ?

- a. 90 m/s
b. 150 m/s
c. 135 m/s
d. 115 m/s

13. From a solid sphere of mass M and radius R , a spherical portion of radius $\frac{R}{2}$ is removed as shown in the figure.

Taking gravitational potential $V = 0$ at $r = \infty$, the potential at the centre of the cavity thus formed is

- a. $-\frac{GM}{2R}$
b. $-\frac{GM}{R}$
c. $-\frac{2GM}{3R}$
d. $-\frac{2GM}{R}$

14. Four charges equal to $+Q$ are placed at the four corners of a square and a charge $(-q)$ is at its centre. If the system is in equilibrium, then the value of $-q$ is

- a. $-\frac{Q}{4}(1 + 2\sqrt{2})$
b. $\frac{Q}{2}(2\sqrt{2} + 1)$
c. $\frac{Q}{4}(1 + 2\sqrt{2})$
d. $\frac{Q}{4}(1 + \sqrt{2})$

15. A force $F = a + bx$ acts on a particle in the x -direction, where a and b are constants. The work done by this force during a displacement from $x = 0$ to $x = d$ is

- a. $\left(a + \frac{bd}{2}\right)d$
b. $\left(ad + \frac{bd}{2}\right)$
c. $\left(\frac{ad + bd}{2}\right)$
d. $(ad + b)\frac{d}{2}$

16. A proton has kinetic energy $E = 100\text{ eV}$ which is equal to that of a photon. The wavelength of photon is λ_2 and that of proton is λ_1 . The ratio $\frac{\lambda_2}{\lambda_1}$ is proportional to

- a. E^2
b. $E^{\frac{1}{2}}$
c. E^{-1}
d. $E^{-\frac{1}{2}}$

17. A block of mass 10 kg rests on a rough inclined plane making an angle of 30° with the horizontal. The coefficient of static friction between the block and the plane is 0.1 . The friction force on the block is
a. 4.9 N
b. $49\sqrt{3}\text{ N}$
c. 49 N
d. $0.1 \times 49\sqrt{3}\text{ N}$

18. Which of the following graphs show the correct relation between conductivity and temperature for a metallic conductor?

19. The radius of a muonic hydrogen atom is 2.5×10^{-13} m. The total atomic volume (in m^3) of a mole of such hydrogen atoms is (Take, $\pi = 3.14$)
- a. 3.94×10^{-14} b. 3.09×10^{-14}
 c. 4×10^{-14} d. 3.9×10^{-14}
20. The angular momentum of a body placed at origin of mass 1 kg and having position vector $\mathbf{r} = 3t\hat{i} + 4\hat{j}$ is
- a. time dependent b. $3\hat{k}$ J-s
 c. $-12\hat{k}$ J-s d. 0
21. If the earth stops rotating about its axis, then what will be the change in the value of g at a place in the equatorial plane? (Radius of earth = 6400 km)
- a. 3.7 cm/s^2 b. 9.8 m/s^2
 c. 0 d. 3.4 cm/s^2
22. Two cars approach a stationary observer from opposite sides as shown in the figure.

The observer hears no beats. If the frequency of the horn of the car B is 504 Hz, then the frequency of the horn of the car A will be

- a. 529.2 Hz b. 440.5 Hz
 c. 295.2 Hz d. None of these

23.

In the following circuit, assuming point A to be at zero potential, then what is the potential at point B?

- a. 1 V b. 2 V
 c. 4 V d. 3 V

24. Two plane mirrors A and B are aligned parallel to each other as shown in the figure.

A ray of light is incident at an angle 30° at a point just inside one end of A. The plane of incidence coincides with the plane of the figure. The maximum number of times, the ray undergoes reflection (excluding the first one) before it emerges out is

- a. 28 b. 34
 c. 30 d. 29

25. A projectile is given an initial velocity of $(\hat{i} + \hat{j})$ m/s, where $\hat{i}$ is along the ground and $\hat{j}$ is along the vertical. If $g = 10 \text{ m/s}^2$, then the equation of its trajectory is

- a. $y = x + 5x^2$ b. $y = x - 5x^2$
 c. $y = x^2 + 5x$ d. $y = x^2 - 5x$

26. Two drops of equal radius (R) coalesce to form a bigger drop. What is the ratio of surface energy of bigger drop to smaller one?

- a. $2^{-1/3} : 1$ b. $2^{2/3} : 1$
 c. 1 : 1 d. $2^{1/2} : 1$

27. Two particles A and B of masses m_A and m_B respectively, are having same charge and moving on same plane. A uniform magnetic field exists perpendicular to this plane. The speeds of the particles are v_A and v_B respectively and the trajectories are as shown in figure. Then,

- a. $m_A = m_B$ and $v_A = v_B$ b. $m_A v_A > m_B v_B$
 c. $m_A < m_B$ and $v_A < v_B$ d. $m_A v_A < m_B v_B$

28. The potential difference applied to an X-ray tube is decreased. As a result, in the emitted radiation,

- a. the intensity increases
 b. the intensity decreases
 c. the minimum wavelength increases
 d. the minimum wavelength decreases

4 SELF STUDY GUIDE BITSAT

29. The ratio of the specific heats $\frac{C_V}{C_P} = \frac{1}{\gamma}$ in terms of degrees of freedom (n) is given by

a. $\left(1 + \frac{n}{3}\right)$ b. $\left(1 + \frac{2}{n}\right)$
c. $\left(1 + \frac{n}{2}\right)$ d. $\left(1 + \frac{1}{n}\right)$

30. A cyclist speeding at 6 m/s in a circle of 18 m radius makes an angle θ with the vertical. The minimum possible value of coefficient of friction between the tyres and the ground is
a. 12.041
b. 0.2041
c. 11.32
d. 10.020

31. Three particles each of mass m are kept at the vertices of an equilateral triangle of side b . Moment of inertia of the system about an axis passing through the centroid and perpendicular to its plane is
a. $3mb^2$ b. mb^2
c. $\frac{mb^2}{3}$ d. $\frac{2}{3}mb^2$

32. An electric dipole is placed at an angle of 30° in a non-uniform electric field. The dipole will experience
a. torque only
b. translational force only in the direction of the field
c. translational force only in a direction normal to the direction of the field
d. torque as well as a translational force

33. Two coils A and B have a mutual inductance 0.001 H. The current changes in the first coil according to the equation $i = i_0 \sin \omega t$, where $i_0 = 10\text{A}$ and $\omega = 10\pi \text{ rads}^{-1}$. The maximum value of emf in the second coil is
a. $0.01\pi \text{ V}$ b. $1\pi \text{ V}$
c. $0.1\pi \text{ V}$ d. $0.05\pi \text{ V}$

34. The current in the circuit will be

- a. 0.125 A b. 0.1 A
c. 0.5 A d. 0.25 A
35. The bob of a pendulum of length 2m lies at P , when it reaches Q , it loses 10% of its total energy due to air resistance.

The velocity of bob at Q is

- a. 6 m/s b. 1 m/s
c. 2 m/s d. 8 m/s

36. A particle executes SHM with a frequency f . The frequency with which its kinetic energy oscillates is
a. $\frac{f}{2}$ b. f
c. $2f$ d. $4f$

37. A radioactive sample at any instant has its disintegration rate 5000 disintegrations per min. After 5 min, the rate is 1250 disintegrations per min. Then, the disintegration constant (per min) is
a. $0.4 \log_e 2$
b. $0.2 \log_e 2$
c. $0.1 \log_e 2$
d. $0.8 \log_e 2$

38. The separation between two parallel plates of capacitor is 1 mm. What is the electric potential generated between the plates of capacitor, when electric field of 2000 N/C is applied on it?
a. 2 V b. 2000 V
c. 0.2 V d. 200 V

39. Choose the correct statement.

- a. The speed of light in the meta-material is $v = c |n|$.
b. The speed of light in the meta-material is $v = \frac{c}{|n|}$.
c. The speed of light in the meta-material is $v = c$.
d. The wavelength of the light in the meta-material (λ_m) is given by $\lambda_m = \lambda_{\text{air}} |n|$.

40. A T-shaped object with dimensions shown in figure, is lying on a smooth floor. A force F is applied at the point P parallel to AB , such that the object has only the translational motion without rotation. Find the location of P with respect to C .

- a. $\frac{2}{3}l$ b. $\frac{3}{4}l$
c. $\frac{3}{2}l$ d. $\frac{4}{3}l$

PART II

Chemistry

41. The most volatile compound among the given option is
 a. *o*-nitrophenol b. *p*-nitrophenol
 c. *m*-nitrophenol d. can't say
42. What is the magnetic moment of Ti^{2+} ?
 (Given : Atomic number = 22)
 a. $\sqrt{8}$ b. $\sqrt{10}$ c. $\sqrt{6}$ d. $\sqrt{9}$
43. Why only Xe can form compounds with fluorine among noble gases?
 a. Large size
 b. Low electronegativity
 c. High ionisation energy
 d. Low electron gain enthalpy
44. Which of the following inert gas is used as cryogenic agent?
 a. He b. Ne c. Ar d. Kr
45. For the following reaction,

$$2A + 3B \longrightarrow 3C + 4D$$
 expression for rate of reaction is
 a. $\frac{d[A]}{dt}$ b. $\frac{1}{2} \frac{d[B]}{dt}$ c. $\frac{1}{3} \frac{d[C]}{dt}$ d. $\frac{1}{4} \frac{d[D]}{dt}$
46. Cyclohexanol on reacting with H_2SO_4 and then heating gives
 a. cyclohexene b. cyclohexanone
 c. cyclohexanol d. None of these
47. The major product obtained on reaction of 3-methylbutene with HCl is
 a. 2-chloro-2-methylbutane
 b. 3-chloro-2-methylbutane
 c. 1-chloro-2-methylbutane
 d. 3-chloro - 3-methylbutane
48. If Rydberg constant is same for all elements, the angular momentum and energy of Li^{2+} of which orbital is equal to angular momentum and energy of 1s-orbital of hydrogen atom?
 a. 3s b. 4s c. 2p d. 3d
49. Sodium iodide reacts with ammonia to gives
 a. $[\text{Na}(\text{NH}_3)_4]\text{I}$ b. $[\text{Na}(\text{NH}_3)_4]\text{I}_3$
 c. $[\text{Na}(\text{NH}_3)_3]\text{I}$ d. $[\text{Na}(\text{NH}_3)_3]\text{I}$
50. In photography, which compound is used as a fixing agent
 a. sodium thiosulphate
 b. ammonium thiosulphate
 c. sodium chloride
 d. Both (a) and (b)
51. The compound formed on reaction of epoxy ethane with NH_3 and H_2O is
 a. mono-ethanol amines b. di-ethanol amines
 c. tri-ethanol amines d. All of these
52. The process of removal of excess electrolyte from colloidal solution is
 a. coagulation b. dialysis
 c. ultra-filtration d. peptisation
53. Maltase converts maltose into
 a. glucose b. sucrose
 c. fructose d. starch
54. Starch is a polymer of
 a. glucose b. fructose
 c. Both a. and (b) d. None of these
55. Methyl alcohol can be distinguished from ethyl alcohol using
 a. Fehling solution
 b. Schiff's reagent
 c. Sodium hydroxide and iodine
 d. Phthalein fusion test
56. Sodium stearate ($\text{C}_{17}\text{H}_{35}\text{COO}^-\text{Na}^+$) is
 a. anionic soap b. cationic detergent
 c. anionic detergent d. Non-ionic soap
57. Which is not an anti-fluorite structure
 a. Rb_2S b. BaF_2 c. K_2O d. Li_2O
58. The structure of ClF_3 is
 a. T-shape b. bent shape
 c. linear d. trigonal planar
59. Which of the following is diamagnetic in nature?
 a. O_2 b. O_2^{2-} c. N_2^{2+} d. B_2
60. The correct order of bond order in SO_2 , SO_3 , SO_4^{2-} , SO_3^{2-} is
 a. $\text{SO}_3^{2-} > \text{SO}_4^{2-} > \text{SO}_3 = \text{SO}_2$
 b. $\text{SO}_4^{2-} > \text{SO}_3 > \text{SO}_2 > \text{SO}_3^{2-}$
 c. $\text{SO}_2 = \text{SO}_3 > \text{SO}_4^{2-} > \text{SO}_3^{2-}$
 d. Can't say
61. Ionisation energy for H^+ ion is proportional to r^n , then value of n is
 a. 1 b. -1 c. 2 d. -2
62. Role of BHA in food industries
 a. prevent oxidation b. prevent reduction
 c. add sweeteners d. None of these

6 SELF STUDY GUIDE BITSAT

63. Permanganate ion (MnO_4^-) is dark purple coloured though Mn is in + 7 oxidation state with d^0 configuration. This is due to
- $d-d$ transition
 - charge transfer from metal to ligand
 - charge transfer from ligand to metal
 - All of the above
64. Rutherford model could not explain
- electronic structure of an atom
 - stability of an atom
 - Both (a) and (b)
 - None of the above
65. Which is true in case of $[\text{Ni}(\text{CO})_4]$?
- Hybridisation of Ni is sp^3
 - Hybridisation of Ni is dsp^2
 - Paramagnetic
 - Square planar
66. SI unit of Boltzmann's constant is
- JK^{-1}
 - eVK^{-1}
 - erg K^{-1}
 - JK
67. Acetone does not undergo which type of reaction?
- Substitution reaction
 - Polymerisation reaction
 - Condensation reaction
 - Addition reaction
68. Magnetic moment of in $[\text{Co}(\text{F}_6)]^{2-}$ of unpaired electron
- $\sqrt{35}$
 - $\sqrt{45}$
 - $\sqrt{40}$
 - $\sqrt{30}$
69. Some statements about heavy water are given below
- Heavy water is used as a moderator in nuclear reactors.
 - Heavy water is more associated than ordinary water.
 - Heavy water is more effective solvent than ordinary water.
- Which of the above statements are correct?
- 1 and 2
 - 1, 2 and 3
 - 2 and 3
 - 1 and 3
70. $\text{CH}_3-\text{CHCl}-\text{CH}_2-\text{CH}_3$ has a chiral centre, which of the following represents its R configurations?
- (a) $\begin{array}{c} \text{C}_2\text{H}_5 \\ | \\ \text{H}_3\text{C}-\text{C}-\text{Cl} \\ | \\ \text{H} \end{array}$

(b) $\begin{array}{c} \text{C}_2\text{H}_5 \\ | \\ \text{H}-\text{C}-\text{CH}_3 \\ | \\ \text{Cl} \end{array}$
- (c) $\begin{array}{c} \text{C}_2\text{H}_5 \\ | \\ \text{Cl}-\text{C}-\text{CH}_3 \\ | \\ \text{H} \end{array}$

(d) $\begin{array}{c} \text{CH}_3 \\ | \\ \text{H}-\text{C}-\text{Cl} \\ | \\ \text{C}_2\text{H}_5 \end{array}$
71. In Victor Meyer's method 0.2 g of an organic substance displaced 56 mL of air at STP the molecular weight of the compound
- 56
 - 112
 - 80
 - 28
72. For the complete combustion of ethanol, $\text{C}_2\text{H}_5\text{OH}(l) + 3\text{O}_2(g) \longrightarrow 2\text{CO}_2(g) + 3\text{H}_2\text{O}(l)$, the amount of heat produced as measured in bomb calorimeter is $1364.47 \text{ kJ mol}^{-1}$ at 25°C . Assuming ideality the enthalpy of combustion, ΔH_c , for the reaction will be ($R = 8.314 \text{ JK}^{-1} \text{ mol}^{-1}$)
- $-1366.95 \text{ kJ mol}^{-1}$
 - $-136195 \text{ kJ mol}^{-1}$
 - $-1460.50 \text{ kJ mol}^{-1}$
 - $-1350.50 \text{ kJ mol}^{-1}$
73. The incorrect expression among the following is
- $\frac{\Delta G_{\text{system}}}{\Delta S_{\text{total}}} = -T$
 - In isothermal process, $W_{\text{reversible}} = -nRT \ln \frac{V_f}{V_i}$
 - $\ln K = \frac{\Delta H^\circ - T\Delta S^\circ}{RT}$
 - $K = e^{-\Delta G^\circ/RT}$
74. The solubility of $\text{Pb}(\text{OH})_2$ in water is $6.7 \times 10^{-6} \text{ M}$. Its solubility in a buffer solution of $\text{pH} = 8$ would be
- 1.2×10^{-2}
 - 1.6×10^{-3}
 - 1.6×10^{-2}
 - 1.2×10^{-3}
75. The density (in g mL^{-1}) of a 3.60 M sulphuric acid solution that is 29% H_2SO_4 (molar mass = 98 g mol^{-1}) by mass will be
- 1.64
 - 1.88
 - 1.22
 - 1.45
76. The relative lowering of vapour pressure of a dilute aqueous solution containing non-volatile solute is 0.0125. The molality of the solution is about
- 0.70
 - 0.50
 - 0.90
 - 0.80
77. Equal masses of methane and oxygen are mixed in an empty container at 25°C . The fraction of the total pressure exerted by oxygen is
- $\frac{2}{3}$
 - $\frac{1}{3} \times \frac{273}{298}$
 - $\frac{1}{3}$
 - $\frac{1}{2}$
78. The molar conductivities of KCl , NaCl and KNO_3 are 152, 128 and $111 \text{ S cm}^2 \text{ mol}^{-1}$ respectively. What is the molar conductivity of NaNO_3 ?
- $101 \text{ S cm}^2 \text{ mol}^{-1}$
 - $87 \text{ S cm}^2 \text{ mol}^{-1}$
 - $-101 \text{ S cm}^2 \text{ mol}^{-1}$
 - $-391 \text{ S cm}^2 \text{ mol}^{-1}$
79. The approximate time duration in hours to electroplate 30 g of calcium from molten calcium chloride using a current of 5 A is (Atomic mass of $\text{Ca} = 40$)
- 80
 - 10
 - 16
 - 8
80. Given, the reduction potential of Na^+ , Mg^{2+} , Al^{3+} and Ag^+ as $E^\circ_{\text{Na}^+/\text{Na}} = -2.17 \text{ V}$; $E^\circ_{\text{Mg}^{2+}/\text{Mg}} = -2.37 \text{ V}$; $E^\circ_{\text{Ag}^+/\text{Ag}} = -0.08 \text{ V}$. The least stable oxide is
- Ag_2O
 - Al_2O_3
 - MgO
 - Na_2O

PART III

a. English Proficiency

Directions (Q. Nos. 81-83) *Choose the word which best expresses the meaning of the underlined word in the sentence.*

81. Decay is an immutable factor of human life.
a. important b. unique
c. unchangeable d. awful
82. It was an ignominious defect for the team.
a. shameful b. admirable
c. unaccountable d. worthy
83. His conjecture was the better than mine.
a. guess b. fact c. surprise d. doubt

Directions (Q. Nos. 84-86) *Fill in the blank.*

84. Freedom and equality are the rights of every human.
a. inalienable b. inscrutable
c. incalculable d. institutional
85. Pradeep's face spoke of the happiness he was feeling.
a. elegantly b. tons
c. volumes d. much
86. His speech was disappointing : it all the major issues.
a. projected b. revealed
c. skirted d. analysed

Directions (Q. Nos. 87-89) *Choose the word which is closest to the opposite in meaning of the given italicised word.*

87. Hydra is biologically believed to be *immortal*.
a. undying b. perishable
c. ancient d. eternal
88. The Gupta rulers *patronised* all cultural activities and thus Gupta period was called the golden era in Indian History.
a. criticised b. rejected
c. opposed d. spurned
89. This is a *barbarous* act.
a. bad b. good
c. civilised d. exemplary

Directions (Q. Nos. 90-92) *In each of the following questions, out of the four alternatives, choose the one which can be substituted for the given words/sentence.*

90. A person who does not believe in any religion
a. Philatelist b. Rationalist
c. Atheist d. Pagan

91. A person who believes that pleasure is the chief good
a. Stoic b. Hedonist c. Epicure d. Sensual

92. One who loves mankind
a. Anthropologist b. Philanthropist
c. Seismologist d. Optometrist

Directions (Q. Nos. 93-95) *Choose the order of the sentences marked A, B, C, D and E to form a logical paragraph.*

93. A. Tasty and healthy food can help you bring out their best.
B. One minute they are toddlers and next you see them in their next adventure.
C. Your young ones seem to be growing so fast.
D. Being their loving custodians, you always want to see them doing well.
E. Their eyes sparkle with curiosity and endless questions on their tongues.

Codes

- a. DBCEA b. CADEB c. CBEDA d. ECABD

94. A. It is hoping that overseas friends will bring in big money and lift the morale of the people.
B. But a lot needs to be done to kick start industrial revival.
C. People had big hopes from the new government.
D. So far government has only given an incremental push to existing policies and programmes.
E. Government is to go for big time reforms, which it promised.

Codes

- a. BCDAE b. EADCB c. DABEC d. CDEAB

95. A. However, women hiring is catching up at a slow and steady rate in the recent times.
B. Gender ratio has been inclined more towards male employees.
C. As a result, recent reports have highlighted the rise in demand for women employees.
D. Women constitute a little over half of world's total population.
E. But, their contribution to measured economic activity is far below the potential.

Codes

- a. DEBAC b. CDAEB c. BCDEA d. AEDBC

b. Logical Reasoning

96. Choose the correct answer figure which will make a complete square on joining with the problem figure.

Problem figure

Answer figures

97. In the following question, five figures are given. Out of them, find the three figures that can be joined to form a square.

- a. ABD b. BCD
c. ACE d. CDE

98. Choose the answer figure which completes the problem figure matrix.

Problem Figure

Answer Figures

99. From the given four positions of a single dice, find the colour at the face opposite to the face having red colour.

- a. Yellow b. Pink
c. Green d. Black

100. In the following questions, one or more dots are placed in the figure marked as (A). The figure is followed by four alternatives marked as (a), (b), (c) and (d). One out of these four options contains region(s) common to the circle, square, triangle, similar to that marked by the dot in figure (A).

Problem Figure

Answer Figures

101. Complete the series by replacing '?' mark.

G4T, J9R, M20P, P43N, S90L, ?

- a. S90L b. V185J
c. M20P d. P43N

102. Neeraj starts walking towards South. After walking 15 m, he turns towards North. After walking 20 m, he turns towards East and walks 10 m. He then turns towards South and walks 5 m. How far is he from his original position and in which direction?

- a. 10 m, East
b. 10 m, South-East
c. 10 m, West
d. 10 m, North-East

103. The average age of 8 men is increased by 2 yrs. when one of them whose age is 20 yr is replaced by a new man. What is the age of the new man?

- a. 28 yr b. 36 yr c. 34 yr d. 35 yr

104. Shikha is mother-in-law of Ekta who is sister-in-law of Ankit. Pankaj is father of Sanjay, the only brother of Ankit. How is Shikha related to Ankit?

- a. Mother-in-law b. Aunt
c. Wife d. Mother

105. In a row of forty children, P is thirteenth from the left end and Q is ninth from the right end. How many children are there between P and R, if R is fourth to the left of Q?

- a. 12 b. 13
c. 14 d. 15

PART IV

Mathematics

- 106.** If $\operatorname{Re}(z + 2) = |z - 2|$, then the locus of z is
 a. parabola
 b. circle
 c. ellipse
 d. hyperbola
- 107.** If $a \in R, b \in R$, then the equation $x^2 - abx - a^2 = 0$ has
 a. one positive root and one negative root
 b. Both positive roots
 c. Both negative roots
 d. Non-real roots
- 108.** If $a + 2b + 3c = 12, (a, b, c \in R^+)$, then the maximum value of ab^2c^3 is
 a. 2^3
 b. 2^4
 c. 2^6
 d. 2^5

- 109.** Sum of n terms of the infinite series

$1.3^2 + 2.5^2 + 3.7^2 + \dots \infty$ is

- a. $\frac{n}{6}(n+1)(6n^2+14n+7)$
b. $\frac{n}{6}(n+1)(6n^2+14n+5)$
c. $\frac{n}{6}(n+1)(2n+1)(3n+1)$
d. $4n^3+4n^2+n$

- 110.** If $\log_7 5 = a$, $\log_5 3 = b$ and $\log_3 2 = c$, then the logarithm of the number 70 to the base 225 is

- a. $\frac{1-a+abc}{2a(1+b)}$ b. $\frac{1-a-abc}{2a(1+b)}$
- c. $\frac{1+a-abc}{2a(1+b)}$ d. $\frac{1+a+abc}{2a(1+b)}$

- 111.** The maximum number of points of intersection of 10 circles is

- a. 80 b. 90 c. 85 d. 95

- 112.** $\frac{C_1}{C_0} + 2\frac{C_2}{C_1} + 3\frac{C_3}{C_2} + 4\frac{C_4}{C_3} + \dots 20\frac{C_{20}}{C_{19}} =$

- a. 120 b. 260 c. 210 d. 180

- 113.** If $p \neq q \neq r$ and $\begin{vmatrix} 0 & x-p & x-q \\ x+p & 0 & x-r \\ x+q & x-r & 0 \end{vmatrix} = 0$, then the

value of x which satisfy the equation is

- a. $x = p$ b. $x = q$ c. $x = r$ d. $x = 0$

- 114.** Matrix $A = \begin{bmatrix} x & 3 & 2 \\ 1 & y & 4 \\ 2 & 2 & z \end{bmatrix}$, if $xyz = 60$ and

$8x + 4y + 3z = 20$, then $A(\text{adj } A)$ is equal to

a. $\begin{bmatrix} 64 & 0 & 0 \\ 0 & 64 & 0 \\ 0 & 0 & 64 \end{bmatrix}$

c. $\begin{bmatrix} 68 & 0 & 0 \\ 0 & 68 & 0 \\ 0 & 0 & 68 \end{bmatrix}$

$$b. \begin{bmatrix} 88 & 0 & 0 \\ 0 & 88 & 0 \\ 0 & 0 & 88 \end{bmatrix}$$

$$d. \begin{bmatrix} 34 & 0 & 0 \\ 0 & 34 & 0 \\ 0 & 0 & 34 \end{bmatrix}$$

- 115.** If $f(x) = 4x - x^2$, $x \in R$, and $f(a + 1) - f(a - 1) = 0$, then a is equal to

- a. 0 b. 2
c. 1 d. 3

- 116.** Which of the following is not an equivalence relation in $\mathbb{Z}$?

- a. $aRb \Leftrightarrow a + b$ is an even integer
 b. $aRb \Leftrightarrow a - b$ is an even integer
 c. $aRb \Leftrightarrow a < b$
 d. $aRb \Leftrightarrow a = b$

- 117.** Which of the following is always true?

- a. $(\sim p \vee \sim q) \equiv (p \wedge q)$
 b. $(p \rightarrow q) \equiv (\sim q \rightarrow \sim p)$
 c. $\sim(p \rightarrow \sim q) \equiv (p \wedge \sim q)$
 d. $\sim(p \leftrightarrow q) \equiv (p \rightarrow q) \rightarrow (q \rightarrow p)$

- 118.** The solution of the inequation $4^{-x+0.5} - 7 \cdot 2^{-x} < 4$, $x \in R$ is

- a. $(-2, \infty)$
b. $(2, \infty)$
c. $\left(2, \frac{7}{2}\right)$
d. None of these

- 119.** If $\cos^3 x \cdot \sin 2x = \sum_{m=1}^n a_m \sin mx$ is identity in x , then

- a. $a_3 = \frac{3}{8}, a_2 = 0$ b. $n = 6, a_1 = \frac{1}{2}$
c. $n = 5, a_1 = \frac{3}{4}$ d. $\sum a_m = \frac{1}{4}$

- 120.** Total number of solutions of

$$|\cot x| = \cot x + \frac{1}{\sin x}, x \in [0, 3\pi] \text{ is equal to}$$

- a. 1 b. 2
c. 3 d. 0

- 121.** The minimum value of $(\sin^{-1} x)^3 + (\cos^{-1} x)^3$ is equal to

- a. $\frac{\pi^3}{32}$ b. $\frac{5\pi^3}{32}$ c. $\frac{9\pi^3}{32}$ d. $\frac{11\pi^3}{32}$

- 122.** The origin is shifted to $(1, 2)$. The equation $y^2 - 8x - 4y + 12 = 0$ changes to $y^2 = 4ax$, then a is equal to
 a. 1 b. 2 c. -2 d. -1
- 123.** The equations of the bisector of the angles between the straight lines $3x + 4y + 7 = 0$ and $12x + 5y - 8 = 0$ are
 a. $7x + 9y + 17 = 0, 99x + 77y + 51 = 0$
 b. $7x - 9y - 17 = 0, 99x + 77y - 51 = 0$
 c. $7x - 9y + 17 = 0, 99x + 77y + 51 = 0$
 d. None of the above
- 124.** Equation of circle which passes through the points $(1, -2)$ and $(3, -4)$ and touch the X -axis is
 a. $x^2 + y^2 + 6x + 2y + 9 = 0$
 b. $x^2 + y^2 + 10x + 20y + 25 = 0$
 c. $x^2 + y^2 + 6x + 4y + 9 = 0$
 d. None of the above
- 125.** If $x = 9$ is the chord of contact of the hyperbola $x^2 - y^2 = 9$, then the equation of the corresponding pair of tangent is
 a. $9x^2 - 8y^2 + 18x - 9 = 0$ b. $9x^2 - 8y^2 - 18x + 9 = 0$
 c. $9x^2 - 8y^2 - 18x - 9 = 0$ d. $9x^2 - 8y^2 + 18x + 9 = 0$
- 126.** The points with position vectors $10\hat{i} + 3\hat{j}$, $12\hat{i} - 15\hat{j}$ and $a\hat{i} + 11\hat{j}$ are collinear, if a is
 a. -8 b. 4 c. 2 d. $\frac{82}{9}$
- 127.** Let a, b, c be vectors of lengths 3, 4, 5 respectively and a be perpendicular to $(b + c)$, b to $(c + a)$ and c to $(a + b)$, then the value of $(a + b + c)$ is
 a. $2\sqrt{5}$ b. $2\sqrt{2}$ c. $10\sqrt{5}$ d. $5\sqrt{2}$
- 128.** For non-zero vectors a, b, c ; $|(a \times b) \cdot c| = |a||b||c|$ holds if and only if
 a. $a \cdot b = 0, b \cdot c = 0$ b. $b \cdot c = 0, c \cdot a = 0$
 c. $c \cdot a = 0, a \cdot b = 0$ d. $a \cdot b = b \cdot c = c \cdot a = 0$
- 129.** Angle between the diagonals of a cube is
 a. $\pi/3$ b. $\pi/2$ c. $\cos^{-1}(1/3)$ d. $\cos^{-1}(1/\sqrt{3})$
- 130.** Consider the two lines
 $L_1: \frac{x+1}{3} = \frac{y+2}{1} = \frac{z+1}{2}$ and $L_2: \frac{x-2}{1} = \frac{y+2}{2} = \frac{z-3}{3}$
 The unit vector perpendicular to both the lines L_1 and L_2 is
 a. $\frac{-\hat{i} + 7\hat{j} + 7\hat{k}}{\sqrt{99}}$ b. $\frac{-\hat{i} - 7\hat{j} + 5\hat{k}}{5\sqrt{3}}$
 c. $\frac{-\hat{i} + 7\hat{j} + 5\hat{k}}{5\sqrt{3}}$ d. $\frac{7\hat{i} - 7\hat{j} + \hat{k}}{\sqrt{99}}$
- 131.** The distance between the line $r = 2\hat{i} - 2\hat{j} + 3\hat{k} + \lambda(\hat{i} - \hat{j} + 4\hat{k})$ and the plane $a \cdot (\hat{i} + 5\hat{j} + \hat{k}) = 5$ is
 a. $\frac{10}{9}$ b. $\frac{10}{3\sqrt{3}}$
 c. $\frac{10}{3}$ d. None of these
- 132.** Two cards are drawn from a pack of 52 cards. What is the probability that either both are red or both are kings?
 a. $\frac{7}{13}$ b. $\frac{63}{221}$ c. $\frac{55}{221}$ d. $\frac{3}{26}$
- 133.** If A and B are two independent events such that $P(A) = \frac{1}{2}$ and $P(B) = \frac{1}{5}$, then which of the following is correct?
 a. $P\left(\frac{A}{B}\right) = \frac{1}{2}$ b. $P\left(\frac{A}{A \cup B}\right) = \frac{5}{6}$
 c. $P\left(\frac{A \cap B}{A' \cup B'}\right) = 0$ d. All of these
- 134.** Box I contains 5 red and 2 blue balls, while box II contains 2 red and 6 blue balls. A fair coin is tossed. If it turns up head, a ball is drawn from box I, else a ball is drawn from box II. The probability ball drawn is from box I, if it is blue, is
 a. $\frac{27}{56}$ b. $\frac{8}{29}$ c. $\frac{21}{29}$ d. $\frac{29}{56}$
- 135.** For a random variable X , $E(X) = 3$ and $E(X^2) = 11$. The variable of X is
 a. 8 b. 5 c. 2 d. 1
- 136.** The sum of 10 items is 12 and the sum of their squares is 18, then the standard deviation will be
 a. $-3/5$ b. $6/5$ c. $4/5$ d. $3/5$
- 137.** The height of the chimney when it is found that on walking towards it 50 m in the horizontal line through its base, the angle of elevation of its top changes from 30° to 60° is
 a. 25 m b. $25\sqrt{2}$ m
 c. $25\sqrt{3}$ m d. None of these
- 138.** The value of $\lim_{x \rightarrow 0} \frac{\sqrt{1 - \cos x^2}}{1 - \cos x}$ is
 a. $\frac{1}{2}$ b. 2
 c. $\sqrt{2}$ d. None of these
- 139.** If $f(x) = \begin{cases} ax^2 + 1, & x \leq 1 \\ x^2 + ax + b, & x > 1 \end{cases}$ is differentiable at $x = 1$, then
 a. $a = 1, b = 0$ b. $a = 1, b = 0$
 c. $a = 2, b = 0$ d. $a = 2, b = 1$

140. The slope of the tangent to the curve $x = t^2 + 3t - 8$, $y = 2t^2 - 2t - 5$ at the point $t = 2$ is

a. $\frac{7}{6}$ b. $\frac{5}{6}$ c. $\frac{6}{7}$ d. 1

141. $\int \frac{1}{1 - 2 \sin x} dx$ is equal to

a. $\frac{1}{2\sqrt{3}} \log \left| \frac{\tan \frac{x}{2} - 2 - \sqrt{3}}{\tan \frac{x}{2} - 2 + \sqrt{3}} \right| + c$

b. $\frac{\sqrt{3}}{2} \log \left| \frac{\tan \frac{x}{2} - 2 - \sqrt{3}}{\tan \frac{x}{2} - 2 + \sqrt{3}} \right| + c$

c. $\frac{1}{\sqrt{3}} \log \left| \frac{\tan \frac{x}{2} - 2 - \sqrt{3}}{\tan \frac{x}{2} - 2 + \sqrt{3}} \right| + c$

d. None of the above

142. $\int_0^1 \frac{\log(1+x)}{1+x^2} dx$ is equal to

a. $\frac{\pi}{8} \log 2$

b. $\frac{\pi}{8} \log \frac{1}{2}$

c. $\frac{\pi}{4} \log 2$

d. None of these

143. The area of one curvilinear triangle formed by curves $y = \sin x$, $y = \cos x$ and X-axis, is

a. 2 sq units

b. $(2 + \sqrt{2})$ sq units

c. $(2 - \sqrt{2})$ sq units

d. None of these

144. Solution of $\left(\frac{x+y-1}{x+y-2} \right) \frac{dy}{dx} = \left(\frac{x+y+1}{x+y+2} \right)$, given that

$y = 1$ when $x = 1$ is

a. $\ln \left| \frac{(x-y)^2 - 2}{2} \right| = 2(x+y)$

b. $\ln \left| \frac{(x+y)^2 - 2}{2} \right| = 2(x-y)$

c. $\ln \left| \frac{(x-y)^2 + 2}{2} \right| = 2(x+y)$

d. $\ln \left| \frac{(x+y)^2 + 2}{2} \right| = 2(x-y)$

145. If $y = \sin \left(2 \tan^{-1} \sqrt{\frac{1-x}{1+x}} \right)$, then $\frac{dy}{dx}$ is

a. 1

b. -1

c. $\frac{x}{\sqrt{x^2 - 1}}$

d. $\frac{-x}{\sqrt{1-x^2}}$

146. The maximum value of the function $y = x(x-1)^2$, is

a. 0

b. $\frac{4}{27}$

c. -4

d. None of these

147. The solution of $x^3 \frac{dy}{dx} + 4x^2 \tan y = e^x \sec y$ satisfying

$y(1) = 0$, is

a. $\tan y = (x-2)e^x \log x$

b. $\sin y = e^x (x-1)x^{-4}$

c. $\tan y = (x-1)e^x x^{-3}$

d. $\sin y = e^x (x-1)x^{-3}$

148. The runs of two players for 10 innings each are as follows

A	58	59	60	54	65	66	52	75	69	52
B	94	26	92	65	96	78	14	34	98	13

The more consistent player is

a. player A

b. player B

c. both player A and B

d. None of these

149. The linear programming problem minimise $z = 3x + 2y$ subject to constraints $x + y \geq 8$, $3x + 5y \leq 15$, $x \geq 0$ and $y \geq 0$, has

a. one solution

b. no feasible solution

c. two solutions

d. infinitely many solutions

150. Find the area enclosed by the loop in the curve

$4y^2 = 4x^2 - x^3$.

a. $\frac{128}{15}$

b. $\frac{15}{128}$

c. $\frac{130}{17}$

d. $\frac{17}{130}$

Solutions

Physics

1. (a) Work done in the cyclic process

$$= \text{Area of the loop } ABCD$$

$$= (2p - p) \times (2V - V) = pV$$

2. (a) Impulse of a force = Area between the force-time graph

Hence, impulse of force = area of $\triangle OAA'$ + area of rectangle $A'BBA'$ + area of trapezium $BB'C'C$ + area of rectangle $CC'ED$

$$= \frac{1}{2} \times 1.5 \times 3 + 1 \times 3 + \frac{1}{2} (3 + 2) (3 - 2.5) + 2 \times 1$$

$$= 2.25 + 3 + 1.25 + 2$$

$$= 8.50 \text{ Ns}$$

3. (c) Bulk modulus = $\frac{\text{Hydraulic stress}}{\text{Volumetric strain}}$

$$\Rightarrow B = \frac{\text{Hydraulic stress}}{\frac{\Delta V}{V}}$$

$$\text{or } \frac{\Delta V}{V} = \text{Hydraulic stress} \times \frac{1}{B}$$

$$\therefore \text{For constant hydraulic stress, } \frac{\Delta V}{V} \propto \frac{1}{B}$$

4. (d) A shunt is a low resistance which is connected in parallel with a galvanometer (or ammeter) to protect it from large current and to increase the range of ammeter.
5. (b) There is a phase difference of 180° between the signal voltage and output voltage in a common emitter amplifier. It is also known as phase reversal.
6. (c) $(n + 1)$ divisions of vernier scale = n division of main scale

$$\therefore 1 \text{ VSD} = \frac{n}{n + 1} \text{ MSD}$$

$$\text{Least count} = 1 \text{ MSD} - 1 \text{ VSD}$$

$$= 1 \text{ MSD} - \frac{n}{n + 1} \text{ MSD} = \frac{1}{n + 1} \text{ MSD}$$

$$= \frac{1}{n + 1} \times a \text{ units} = \frac{a}{n + 1} \text{ units}$$

[$\because$ given, $1 \text{ MSD} = a \text{ units}$]

7. (a) According to the question,

Let $OB = x$, $OA = y$ and $x = L \cos \theta$

So, by Pythagoras theorem,

$$\Rightarrow x^2 + y^2 = L^2$$

Differentiating w.r.t. 't', we get

$$2x \frac{dx}{dt} + 2y \frac{dy}{dt} = 0$$

$$2x v_B + 2y v_A = 0 \quad \left[\because \frac{dx}{dt} = v_B \text{ and } \frac{dy}{dt} = v_A \right]$$

$$\Rightarrow v_A = -\frac{x}{y} v_B$$

$$\Rightarrow |v_A| = \frac{x}{y} v_B = v_B \cot \theta \quad \left[\because \frac{x}{y} = \cot \theta \right]$$

$$= \sqrt{3} \times \cot 30^\circ$$

$$= \sqrt{3} \times \frac{1}{\sqrt{3}} = 1 \text{ m/s}$$

8. (a) Let k be the force constant of spring.

$$\text{Time period, } T = 2\pi \sqrt{\frac{M}{k}} \quad \dots(i)$$

When block of mass m is placed in the tray, the time period of oscillations becomes

$$T' = 2\pi \sqrt{\frac{M + m}{k}} \quad \dots(ii)$$

On dividing Eq. (ii) by Eq. (i), we get

$$\Rightarrow \frac{T'}{T} = \frac{\sqrt{M + m}}{\sqrt{M}}$$

$$\Rightarrow \frac{3}{1.5} = \sqrt{\frac{12 + m}{12}} \quad \left[\text{given, } M = 12 \text{ kg, } T = 1.5 \text{ s, } T' = 3 \text{ s} \right]$$

$$\Rightarrow \sqrt{\frac{12 + m}{12}} = 2$$

$$\Rightarrow 12 + m = 48$$

$$\Rightarrow m = 36 \text{ kg}$$

14 SELF STUDY GUIDE BITSAT

9. (c) As shown in phasor diagram, voltage leads the current.

As in purely inductive circuit, current lags behind the voltage by an angle of 90° , here angle is not 90° but it is lesser than that.

So, this type of case arise in $R-L-C$ circuit when $R-L-C$ load with inductive reactance is more than the capacitive reactance as shown below.

10. (b) Given,

$$Y = \sin \left[\pi \left(\frac{t}{5} - \frac{x}{9} \right) + \frac{\pi}{6} \right] \quad \dots(i)$$

The general equation of progressive wave is

$$Y = A \sin \left[2\pi \left(\frac{t}{T} - \frac{x}{\lambda} \right) + \phi \right] \quad \dots(ii)$$

On comparing Eq. (i) with Eq. (ii), we get

$$A = 1 \text{ cm}, \quad f = 0.1 \text{ Hz}, \quad v = 1.8 \text{ cm/s}$$

$$\text{and} \quad \frac{2\pi}{\lambda} = \frac{\pi}{9}$$

$$\Rightarrow \quad \lambda = 18 \text{ cm}$$

11. (a) In fibre optic communication, signals are transmitted through an optical fibre. The property of light used in transmission through optical fibre cables is total internal reflection.

12. (b) Distance moved by man in 5 min with velocity of 45 m/s is

$$\text{Distance} = \text{Speed} \times \text{Time}$$

$$= 45 \text{ m/s} \times (5 \times 60) \text{ s} = 13500 \text{ m}$$

When he move back, it covers the same distance to come back to its original position.

Now, time taken = 15 min

$$= 15 \times 60 \text{ s} = 90 \text{ s}$$

Distance travelled = 13500 m

$$\therefore \text{Speed} = \frac{\text{Distance}}{\text{Time}} = \frac{13500}{90} = 150 \text{ m/s}$$

13. (b) Potential at point P due to the solid sphere,

$$\begin{aligned} V_1 &= -\frac{GM}{2R^3} \left[3R^2 - \left(\frac{R}{2} \right)^2 \right] \\ &= -\frac{11GM}{8R} \end{aligned}$$

Potential at point P due to the cavity part,

$$V_2 = -\frac{3}{2} \frac{G \left(\frac{M}{8} \right)}{\frac{R}{2}} = -\frac{3GM}{8R}$$

Potential due to the remaining part at point P ,

$$V = V_1 - V_2 = -\frac{11GM}{8R} + \frac{3GM}{8R}$$

$$\Rightarrow \quad V = -\frac{GM}{R}$$

14. (c) Consider the equilibrium of charge Q at corner A

$$F_B = F_D = \frac{1}{4\pi\epsilon_0} \frac{Q^2}{a^2} = \frac{kQ^2}{a^2} \quad \left[\because \frac{1}{4\pi\epsilon_0} = k \right]$$

$$F_C = \frac{kQ^2}{(\sqrt{2}a)^2} \quad [\because AC = \sqrt{2}a]$$

$$= \frac{kQ^2}{2a^2}$$

$$F_O = \frac{k Q q}{\left(\frac{a}{\sqrt{2}} \right)^2} = \frac{k 2Qq}{a^2} \quad \left[\because OC = \frac{a}{\sqrt{2}} \right]$$

For equilibrium of charge Q at corner A , the net force on this charge along AC must be zero.

$$\begin{aligned} \therefore \quad F_O &= F_C + F_B \cos 45^\circ + F_D \cos 45^\circ \\ &= F_C + 2F_B \cos 45^\circ \quad [\because F_B = F_D] \\ &= F_C + 2F_B \times \frac{1}{\sqrt{2}} \quad \left[\because \cos 45^\circ = \frac{1}{\sqrt{2}} \right] \end{aligned}$$

$$\Rightarrow \quad \frac{k 2Qq}{a^2} = \frac{k Q^2}{2a^2} + \frac{2 \times k Q^2}{a^2} \times \frac{1}{\sqrt{2}}$$

$$\Rightarrow \quad 2Qq = \frac{Q^2}{2} + \frac{Q^2}{\sqrt{2}} \times 2$$

$$\Rightarrow \quad 2q = \frac{Q}{2} + Q\sqrt{2}$$

$$\Rightarrow \quad q = \frac{Q}{4} (1 + 2\sqrt{2})$$

15. (a) Work done by the particle in X -direction is given by $dW = F dx = (a + bx) dx$

Total work done in displacement from

$x = 0$ to $x = d$ will be

$$W = \int dW = \int_0^d (a + bx) dx$$

$$= \left[ax + \frac{bx^2}{2} \right]_0^d$$

$$\Rightarrow W = \left(a + \frac{bd}{2} \right) d$$

16. (d) Kinetic energy of a proton is given by

$$E = \frac{1}{2} m_p v_p^2$$

$$\Rightarrow E = \frac{p^2}{2m_p} \quad [\because p = mv]$$

$\therefore$ Wavelength of proton is, $\lambda_1 = \frac{h}{p}$

$$\Rightarrow \lambda_1 = \frac{h}{\sqrt{2m_p E}} \quad \dots(i)$$

Now, energy of photon is given by

$$E = h\nu_2 \Rightarrow E = \frac{hc}{\lambda_2}$$

$$\Rightarrow \lambda_2 = \frac{hc}{E} \quad \dots(ii)$$

where, λ_2 is wavelength of photon.

On dividing Eq. (ii) by Eq. (i), we get

$$\frac{\lambda_2}{\lambda_1} = \frac{hc}{E} \times \frac{\sqrt{2m_p E}}{h}$$

$$\Rightarrow \frac{\lambda_2}{\lambda_1} = \frac{c}{\sqrt{E}} \sqrt{2m_p}$$

$$\Rightarrow \frac{\lambda_2}{\lambda_1} \propto E^{-1/2}$$

17. (c) The FBD of block of mass 10 kg is

For the equilibrium of block, the frictional force must be balanced the sine component of mg .

$$\therefore f = mg \sin 30^\circ$$

$$= 10 \times 9.8 \times \frac{1}{2} = 49 \text{ N}$$

18. (b) Conductivity (σ) of a metallic conductor is given by

$$\sigma = \frac{1}{\rho} = \frac{ne^2\tau}{m}$$

where, ρ = resistivity of conductor,

τ = relaxation time,

n = number of free electrons

and m = mass.

For metals, as the temperature increases, the relaxation time τ decreases because collisions become more frequent. Hence, the conductivity of a metallic conductor decreases with the increases of temperature.

19. (a) Given, radius of hydrogen atom, $r = 2.5 \times 10^{-13} \text{ m}$

$$\text{Volume of one atom, } V = \frac{4}{3} \pi r^3$$

$$\text{Number of atoms in 1 mole} = 6.023 \times 10^{23}$$

$$\begin{aligned} \text{Volume of 1 mole of H-atoms} &= N \times \frac{4}{3} \pi r^3 \\ &= 6.023 \times 10^{23} \times \frac{4}{3} \times 3.14 \times (2.5 \times 10^{-13})^3 \\ &= 3.94 \times 10^{-14} \text{ m}^3 \end{aligned}$$

20. (c) Given, $m = 1 \text{ kg}$, $\mathbf{r} = 3t \hat{\mathbf{i}} + 4\hat{\mathbf{j}}$

$$\begin{aligned} \text{Velocity of body, } \mathbf{v} &= \frac{d\mathbf{r}}{dt} \\ &= \frac{d}{dt} (3t\hat{\mathbf{i}} + 4\hat{\mathbf{j}}) \Rightarrow \mathbf{v} = 3\hat{\mathbf{i}} \end{aligned}$$

Angular momentum, $\mathbf{L} = m(\mathbf{r} \times \mathbf{v})$

$$= 1 \times [(3t\hat{\mathbf{i}} + 4\hat{\mathbf{j}}) \times 3\hat{\mathbf{i}}]$$

$$= \begin{vmatrix} \hat{\mathbf{i}} & \hat{\mathbf{j}} & \hat{\mathbf{k}} \\ 3t & 4 & 0 \\ 3 & 0 & 0 \end{vmatrix}$$

$$= [3t \times 0 - 4 \times 3] \hat{\mathbf{k}}$$

$$\Rightarrow \mathbf{L} = -12\hat{\mathbf{k}} \text{ J-s}$$

21. (d) The value of g at equator is expressed as

$$g_e = g - R\omega^2 \cos \phi = g - R\omega^2 \quad [\because \cos \phi = 1]$$

$\Rightarrow$ Change in value of g is $g - g_e$

$$= R\omega^2 = R \left(\frac{2\pi}{T} \right)^2$$

$$= 6.4 \times 10^6 \times \left[\frac{2\pi}{24 \times 60 \times 60} \right]^2$$

$$= 3.37 \times 10^{-2} \text{ m/s}^2$$

$$\approx 3.4 \text{ cm/s}^2$$

22. (a) Apparent frequency of car A = Apparent frequency of car B

$$\Rightarrow \frac{v}{v - v_s} \times v = \frac{v}{v - v_s'} \times v'$$

$$\Rightarrow \frac{v}{v - 15} = \frac{504}{v - 30}$$

$$\Rightarrow v = \frac{340 - 15}{340 - 30} \times 504 \quad \left[\because \text{velocity of sound in air is } 340 \text{ m/s} \right]$$

$$\Rightarrow v = 529.2 \text{ Hz}$$

23. (b) Using Kirchhoff's loop law, in loop $BDCR_1 B$, we get

$$2 \times 2 + 3R_1 = 4 \quad \text{or} \quad R_1 = 0$$

$\therefore$ Potential drop at B = Potential drop at C

$$\Rightarrow V_B = V_C = 2 + V_A$$

$$= 2 + 0$$

[$\because V_A = 0$, given]

$$\Rightarrow V_B = 2 \text{ V}$$

24. (d) Let N be the maximum number of reflection that ray undergoes.

Suppose it covers x distance in one reflection, then

$$Nx = 2\sqrt{3}$$

$$\Rightarrow N = \frac{2\sqrt{3}}{x} = \frac{2\sqrt{3}}{0.2 \tan 30^\circ} \quad [\because x = 0.2 \tan 30^\circ]$$

$$N = \frac{6}{0.2} = 30$$

Number of reflections ray undergoes before it emerges excluding the first one are $N - 1$

$$= 30 - 1 = 29$$

25. (b) According to equation of motion, in vector form,

$$\mathbf{v} = \mathbf{u} - gt \cdot \hat{\mathbf{j}}$$

$$\Rightarrow \mathbf{v} = \hat{\mathbf{i}} + \hat{\mathbf{j}} - 10t \hat{\mathbf{j}}$$

Integrating w.r.t. ' t ' both sides, we get

$$\mathbf{r} = \int \mathbf{v} dt = \int (\hat{\mathbf{i}} + \hat{\mathbf{j}} - 10t \hat{\mathbf{j}}) dt$$

$$\text{or} \quad x\hat{\mathbf{i}} + y\hat{\mathbf{j}} = t\hat{\mathbf{i}} + t\hat{\mathbf{j}} - 5t^2 \hat{\mathbf{j}}$$

$\therefore$ On comparing, we get

$$x = t$$

$$\text{and} \quad y = t - 5t^2$$

$$\Rightarrow y = x - 5x^2$$

This is the required equation of trajectory of particle.

26. (a) Volume of bigger drop = Volume of two smaller drops

$$\Rightarrow \frac{4}{3} \pi R^3 = 2 \times \frac{4}{3} \pi r^3$$

where, R is the radius of bigger drop.

$$\Rightarrow R^3 = 2r^3$$

$$\Rightarrow R = 2^{1/3} r$$

Initial surface energy of two small drops, $U_1 = 8\pi r^2 \sigma$... (i)

Final surface energy of big drop, $U_2 = 4\pi R^2 \sigma$

$$= 4\pi \times 2^{2/3} r^2 \sigma \quad \dots (ii)$$

On dividing Eq. (ii) by Eq. (i), we get

$$\frac{U_2}{U_1} = \frac{4\pi \times 2^{2/3} r^2 \sigma}{8\pi r^2 \sigma} = \frac{2^{2/3}}{2} = \frac{2^{-1/3}}{1}$$

Ratio of surface energy of bigger drop to smaller one is $2^{-1/3} : 1$.

27. (b) Force on charge particle in magnetic field is balanced by

centripetal force, so $\frac{mv^2}{r} = qvB \sin 90^\circ$

[$\theta = 90^\circ$, therefore magnetic field is perpendicular]

$$\frac{mv^2}{r} = qvB \quad [\sin 90^\circ = 1]$$

$$\Rightarrow r = \frac{mv}{qB}$$

For both particles, q and B are same.

Therefore, $r \propto mv$

$$\text{or} \quad \frac{r_A}{r_B} = \frac{m_A v_A}{m_B v_B}$$

As, $r_A > r_B$ [given]

$$\Rightarrow m_A v_A > m_B v_B$$

28. (c) Minimum wavelength for X-ray is given by

$$\lambda_{\min} = \frac{12375}{V} \text{ \AA}$$

As the accelerating voltage V is decreased, $\lambda_{\min}$ increases.

The intensity of emitted radiation is determined by the number of electrons bombarding the target.

$\therefore$ Accelerating voltage does not change the intensity of X-rays emitted.

29. (b) As we know, $C_V = \frac{n}{2} R$... (i)

$$C_p = \left(\frac{n}{2} + 1 \right) R \quad \dots (ii)$$

On dividing Eq. (ii) by Eq. (i), we get

$$\frac{C_p}{C_V} = \gamma = \frac{\left(\frac{n}{2} + 1 \right)}{\frac{n}{2}} = 1 + \frac{2}{n}$$

$$\Rightarrow \frac{C_p}{C_V} = 1 + \frac{2}{n}$$

30. (b) Given, $v = 6 \text{ m/s}$, $r = 18 \text{ m}$, $g = 9.8 \text{ m/s}^2$

Now, the velocity of cyclist is given by

$$v^2 = rg \tan \theta \quad \text{or} \quad \tan \theta = \frac{v^2}{rg} = \frac{6 \times 6}{18 \times 9.8}$$

$$\Rightarrow \tan \theta = 0.2041$$

The minimum value of coefficient of friction, $\mu = \tan \theta$

$$\Rightarrow \mu = 0.2041$$

31. (b) Let us consider an equilateral $\triangle ABC$ of side b .

From figure,

In $\triangle AOD$,

$$\begin{aligned} \cos 30^\circ &= \frac{AD}{AO} \\ \Rightarrow \frac{\sqrt{3}}{2} &= \frac{\frac{b}{2}}{r} \quad \left[\because \cos 30^\circ = \frac{\sqrt{3}}{2} \right] \\ \Rightarrow r &= \frac{b}{2} \times \frac{2}{\sqrt{3}} = \frac{b}{\sqrt{3}} \end{aligned}$$

Moment of inertia about line passing through centroid,

$$\begin{aligned} I &= 3 \times mr^2 \quad [\text{due to 3 masses present in system}] \\ \Rightarrow &= 3 \times m \times \left(\frac{b}{\sqrt{3}} \right)^2 \\ \Rightarrow I &= mb^2 \end{aligned}$$

32. (d) When a dipole is placed in a non-uniform electric field, opposite charges of the dipole experiences a force due to $\mathbf{E}$. It is as shown in the figure below

These forces will act in opposite direction. Now, since the electric field is not uniform, so the force experienced by the charges will be unequal.

Hence, there will be a net force acting on the dipole, as they do not cancel each other.

Also, forces on the charges are not linear as shown above. So, they will experience a non-zero torque. Hence, the dipole will experience both translational force and torque in a non-uniform electric field.

33. (c) Induced emf, $\varepsilon = -M \frac{di}{dt}$

where, i is given as, $i = i_0 \sin \omega t$

$$\begin{aligned} \Rightarrow \varepsilon &= -M \frac{d}{dt} [i_0 \sin \omega t] \\ &= M i_0 \omega \cos \omega t \end{aligned}$$

For maximum value of emf in second coil, $\cos \omega t$ is maximum, i.e. 1.

$$\begin{aligned} E_{\max} &= M i_0 \omega \quad [\because \cos \omega t = 1] \\ \Rightarrow &= 0.001 \times 10 \times 10\pi \\ \Rightarrow E_{\max} &= 0.1 \pi \text{ V} \end{aligned}$$

Hence, maximum emf value induced in second coil is $0.1 \pi \text{ V}$.

34. (b) Diode D_1 does not conduct because it is connected in reversed biased position.

Hence, only D_2 conducts as it is forward biased.

$\therefore$ Current in circuit is given by

$$\begin{aligned} i &= \frac{V}{R} \\ &= \frac{5}{30 + 20} = \frac{5}{50} \text{ A} \Rightarrow i = 0.1 \text{ A} \end{aligned}$$

35. (a) Kinetic energy at $Q = 90\%$ of potential energy at P

$$\begin{aligned} \Rightarrow \frac{1}{2} mv^2 &= \frac{90}{100} \times mgh \\ \Rightarrow v &= \sqrt{1.8gh} \Rightarrow v = \sqrt{1.8 \times 10 \times 2} \\ \Rightarrow v &= 6 \text{ m/s} \end{aligned}$$

36. (c) Let displacement, $x = A \sin \omega t$

$$\text{Velocity, } v = \frac{dx}{dt} = A \omega \cos \omega t$$

Kinetic energy of particle in SHM,

$$\begin{aligned} K &= \frac{1}{2} mv^2 \Rightarrow K = \frac{1}{2} m \omega^2 A^2 \cos^2 \omega t \\ &= \frac{1}{2} m \omega^2 A^2 \left(\frac{1 + \cos 2\omega t}{2} \right) \quad \left[\because \cos^2 \theta = \frac{1 + \cos 2\theta}{2} \right] \\ &= \frac{1}{4} m \omega^2 A^2 (1 + \cos 2\omega t) \end{aligned}$$

$\therefore$ New angular frequency, $\omega_K = 2\omega$

$\therefore$ Frequency of oscillation of kinetic energy = $2f$ $\left[\because f = \frac{\omega}{2\pi} \right]$

37. (a) According to law of radioactivity, the rate of disintegration is given as

$$R = \lambda N = \lambda N_0 e^{-\lambda t}$$

Given, $R = 5000$

$$\Rightarrow 5000 = \lambda N_0 e^{-\lambda t} \quad \dots (i)$$

After 5 min, $R = 1250$

$$\therefore 1250 = \lambda N_0 e^{-\lambda(t+5)} \quad \dots (ii)$$

On dividing Eq. (i) by Eq. (ii), we get

$$\begin{aligned} \frac{5000}{1250} &= \frac{e^{-\lambda t}}{e^{-\lambda(t+5)}} \\ \Rightarrow 4 &= e^{5\lambda} \end{aligned}$$

18 SELF STUDY GUIDE BITSAT

Taking log both sides, we get

$$\log_e 4 = \log_e (e^{5\lambda})$$

$$\Rightarrow \log_e 4 = 5\lambda \Rightarrow \lambda = \frac{1}{5} \log_e 2^2$$

$$\Rightarrow \lambda = 0.4 \log_e 2$$

38. (a) In a uniform electric field, potential difference across two parallel plates of capacitor,

$$V = Ed$$

where, E is electric field and d is separation between plates.

$$\Rightarrow V = 2000 \times (1 \times 10^{-3}) = 2 \text{ V}$$

39. (b) When light travel in meta-material, physical characteristics remain unchanged.

$$\therefore v = \frac{c}{|n|}$$

where, $|n|$ is the relative refractive index of meta-material.

$$\text{As, } n = \frac{c}{v} \Rightarrow |n| = \frac{n_{\text{med}}}{n_{\text{air}}}$$

$$\Rightarrow |n| = \frac{\lambda_{\text{air}}}{\lambda_{\text{med}}} \Rightarrow \lambda_{\text{med}} = \frac{\lambda_{\text{air}}}{|n|}$$

40. (d) Let O be the centre of mass of part AB and Q that of CD . Let M be the mass per unit length of the parts AB and CD .

As, no rotation is set up about point P , so

moment of part AB about P = moment of part CD about P

$$\text{or } (ml)x = (2ml)(l-x) \quad \left[\because m = \frac{M}{l} \right]$$

$$\text{or } x = 2l - 2x$$

$$\text{or } x = 2l/3$$

Distance of P from the end $C = 2l - 2l/3 = 4l/3$

Chemistry

41. (a) *o*-nitrophenol forms intramolecular H-bonding whereas molecules of *p*-nitrophenol get associated through intermolecular H-bond.
 $\therefore$ *o*-nitrophenol is the most volatile compound.

42. (a) The magnetic moment is given by $\mu = \sqrt{n(n+2)}$ BM.

(where, n = number of unpaired electron).

Electronic configuration of

$\therefore$ Number of unpaired electron = 2

$$\therefore \mu = \sqrt{2(2+2)} = \sqrt{8}$$

43. (a) Only Xe can form compounds with fluorine among noble gases because Xe is large in size and have high atomic mass. Due to having larger atomic radius the force of attraction between the outer electrons and protons in the nucleus is weaker. Hence, they are easily available to form compound.

44. (a) Helium is used as a cryogenic agent due to its very low melting point.

45. (c) The rate of reaction for the given reaction is

$$r = -\frac{1}{2} \frac{d[A]}{dt} = -\frac{1}{3} \frac{d[B]}{dt} = \frac{1}{3} \frac{d[C]}{dt} = \frac{1}{4} \frac{d[A]}{dt}$$

46. (a) Cyclohexanol on reaction with H_2SO_4 and heating gives cyclohexene as follows

47. (a) Addition of HCl to 3-methylbutene gives 2-chloro-2-methylbutane as major product.

The mechanism reaction is as follows

48. (a) Energy for H-like atom, $(E) \propto \frac{Z^2}{n^2}$

For hydrogen, $Z = 1, n = 1$

For lithium $Z = 3, n = ?$

$\therefore$ For same energy,

$$E_H = E_{Li} \Rightarrow \frac{Z_H^2}{n_H^2} = \frac{Z_{Li}^2}{n_{Li}^2}$$

$$\therefore n_{Li}^2 = \frac{Z_{Li}^2 \times n_H^2}{Z_H^2} \Rightarrow n_{Li}^2 = \frac{3^2 \times 1}{1}$$

$$n_{Li} = 3$$

While angular momentum $(nh/2\pi)$ is independent of atomic number.

$\therefore$ For 3s-orbital of lithium atom, energy and angular momentum is equal to that of 1s orbital of hydrogen atom.

49. (a) Sodium iodide reacts with ammonia to produce tetraamminesodium iodide. The reaction is conducted in liquid ammonia. The reaction is as follows

50. (d) Sodium or ammonium thiosulphate is used as a fixing agent in photography. They convert the silver halide into soluble, complex silver salts that dissolve in the fixer. During this process the film loses its original silver halide milky appearance overlaying the image and becomes clear.
51. (d) Epoxy ethane reacts with ammonia forming a mixture of mono, di-, tri-ethanol amines, in the presence of small amount of water as follows.

52. (b) Dialysis is a process of removing excess electrolyte from colloidal solution by means of diffusion through a suitable membrane.
53. (a) Maltase converts maltose into glucose by hydrolysis as follows

54. (a) Starch is a polymer of glucose. In sucrose, two monosaccharide (glucose) units are joined by α -1, 2 glycoside bond.
55. (c) Methyl alcohol can be distinguished from ethyl alcohol by iodoform test as follows by using sodium hydroxide and iodine.

56. (a) Sodium stearate ($\text{C}_{17}\text{H}_{35}\text{COO}^-\text{Na}^+$) is an anionic soap. Anionic part of sodium stearate is involved in cleansing action.
57. (b) BaF_2 is not an anti-fluorite structure. It is of AB_2 type i.e. fluorite (CaF_2) structure. While Rb_2S , K_2O and Li_2O are anti-fluorite structures.
58. (a) The shape of ClF_3 is as follows

T-shape structure

It has two lone pairs at equatorial position.

59. (b) Molecular electronic configuration for given species are

It has two unpaired electrons.

- (b) O_2^{2-} : It has no unpaired electron.
- (c) N_2^{2+} : It has one unpaired electron.
- (d) B_2 : It has two unpaired electrons.
- $\therefore \text{O}_2^{2-}$ is diamagnetic in nature.

60. (c) Bond order for the various compounds are as follows

For SO_2 ,

Number of bonds = 4

Number of (SO) groups = 2

$$\therefore \text{Bond order} = \frac{4}{2} = 2$$

For SO_3 ,

Number of bonds = 6

Number of (SO) groups = 3

$$\therefore \text{Bond order} = \frac{6}{3} = 2$$

For SO_4^{2-} ,

Number of bonds = 6

Number of (SO) groups = 4

$$\therefore \text{Bond order} = \frac{6}{4} = 1.5$$

For SO_3^{2-} ,

Number of bonds = 4

Number of (SO) groups = 3

$$\therefore \text{Bond order} = \frac{4}{3} = 1.33$$

Hence, correct order is $\text{SO}_2 = \text{SO}_3 > \text{SO}_4^{2-} > \text{SO}_3^{2-}$.

61. (b) The energy required for ionisation

$$\text{H-atom is given by, } E = \frac{-kZe^2}{2r}$$

where, Z = atomic number e = charge on proton/electron r = radius of that electron

$$\therefore E \propto \frac{1}{r} \quad \text{or} \quad E \propto r^{-1}$$

$$\therefore n = -1$$

62. (a) BHA is antioxidant (i.e. prevent oxidation). It help in food preservation by retarding the action of oxygen on food. As it is more reactive towards oxygen than the food material.

63. (c) In
- MnO_4^-
- ,

$$x + (-2)4 = -1 \Rightarrow x = +7$$

 ${}_{25}\text{Mn}^{+7} = [\text{Ar}]$, no unpaired electrons.Thus, it will not show $d-d$ transition. It is dark purple coloured due to charge transfer from ligand to metal.

64. (c) Rutherford model could not explain.

- (i) Electronic structure of an atom.
- (ii) Stability of an atom.

65. (a) The oxidation state of Ni in
- $[\text{Ni}(\text{CO})_4]$
- is 0.

The electronic configuration of Ni is $3d^8 4s^2$.

As CO is a strong ligand, pairing of electrons occur.

As, it has sp^3 -hybridisation, so the geometry is tetrahedral. Since, it has no unpaired electrons. So, the complex is diamagnetic.

66. (a) The SI unit of Boltzmann's constant is
- JK^{-1}
- .

67. (a) Acetone does not undergo substitution reaction because they do not contain suitable leaving group.

68. (a) Oxidation number of Co,

$$x + (-1 \times 6) = -2$$

$$\therefore x = 4$$

 $\therefore$ Electronic configuration of Co^{4+} ,

$$\text{Co} : [\text{Ar}] 3d^5$$

 $\therefore$ Number of unpaired electrons = 5

$$\therefore \text{Magnetic moment} = \sqrt{n(n+2)} = \sqrt{5 \times 7} = \sqrt{35} \text{ BM}$$

69. (a) Dielectric constant of
- $\text{H}_2\text{O} > \text{D}_2\text{O}$
- . Therefore,
- H_2O
- is more effective solvent. B. P. of
- $\text{D}_2\text{O} > \text{B.P. of } \text{H}_2\text{O}$
- .

70. (c) According to sequence rule, the priority order are

Cl > C_2H_5 > CH_3 > H, so in R configuration.

71. (c) Molecular mass

$$= \frac{\text{Weight of organic substance taken}}{\text{Air displaced at STP}} \times 22400$$

$$= \frac{0.2}{56} \times 22400 = 80$$

72. (a)
- $\text{C}_2\text{H}_5\text{OH}(l) + 3\text{O}_2(g) \longrightarrow 2\text{CO}_2(g) + 3\text{H}_2\text{O}(l)$

$$\Delta U = -1364.47 \text{ kJ/mol,}$$

$$\Rightarrow \Delta n_g = -1$$

$$T = 25^\circ \text{C} = 298 \text{ K}$$

$$\therefore \Delta H = \Delta U + \Delta n_g RT$$

$$\Delta H = -1364.47 + \frac{-1 \times 8.314 \times 298}{1000}$$

[Here, value of R in unit of J must be converted into kJ]

$$= -1364.47 - 2.4776 = -1366.95 \text{ kJ/mol}$$

73. (c) (a)
- $\Delta G = \Delta H - T \Delta S$

For a system, total entropy change is ΔS_{total} ,

$$\Delta H_{\text{total}} = 0$$

$$\therefore \Delta G_{\text{system}} = -T \Delta S_{\text{total}}$$

$$\therefore \frac{\Delta G_{\text{system}}}{\Delta S_{\text{total}}} = -T$$

Thus, (a) is true,

(b) For isothermal reversible process, $\Delta E = 0$.

By first law of thermodynamics,

$$\Delta E = q + W$$

$$\therefore W_{\text{reversible}} = -q = - \int_{V_i}^{V_f} p dV$$

$$W_{\text{reversible}} = -nRT \ln \frac{V_f}{V_i}$$

Thus, (b) is true.

- (c)
- $\Delta G^\circ = \Delta H^\circ - T \Delta S^\circ$

$$\Delta G^\circ = -nRT \ln K = -RT \ln K \quad (\text{for } n = 1)$$

$$\therefore -RT \ln K = \Delta H^\circ - T \Delta S^\circ$$

$$\therefore \ln K = - \left(\frac{\Delta H^\circ - T \Delta S^\circ}{RT} \right)$$

Thus, (c) is incorrect.

- (d)
- $\Delta G^\circ = -RT \ln K$

$$\therefore \ln K = - \frac{\Delta G^\circ}{RT} \therefore K = e^{-\Delta G^\circ/RT}$$

Thus, (d) is also true.

74. (d)
- $\text{Pb}(\text{OH})_2 \rightleftharpoons \text{Pb}^{2+} + 2\text{OH}^-$

$$K_{\text{sp}} = [\text{Pb}^{2+}][\text{OH}^-]^2 = S \times (2S)^2$$

$$K_{\text{sp}} = 4S^3 = 4 \times (6.7 \times 10^{-6})^3 = 1.20 \times 10^{-15}$$

In a solution with pH = 8

$$[H^+] = 10^{-8} \text{ and } [OH^-] = 10^{-6}$$

$$1.20 \times 10^{-15} = [Pb^{2+}][10^{-6}]^2$$

$$[Pb^{2+}] = \frac{1.2 \times 10^{-15}}{[10^{-6}]^2} = 1.2 \times 10^{-3} \text{ M}$$

75. (c) Molarity = $\frac{10 \times \text{density} \times \text{percentage weight of solute}}{\text{molecular weight of the solute}}$

$$\Rightarrow \text{Density} = \frac{3.60 \times 98}{10 \times 29} = 1.216 = 1.22$$

76. (a) According to Raoult's law, relative lowering of vapour pressure is equal to mole fraction of solute,

$$\therefore \frac{p - p_s}{p} = \frac{n}{n + N} = \frac{w}{m} \frac{w/m}{\frac{w}{m} + \frac{W}{M}} \Rightarrow \frac{w}{m} < < \frac{W}{M}$$

$$\therefore \frac{p^\circ - p_s}{p^\circ} = \frac{w/m}{\frac{W}{M}} = \frac{w}{m} \times \frac{M}{W}$$

$$0.0125 = \frac{w \times 18}{m \times W} \Rightarrow \frac{w}{mW} = \frac{0.0125}{18}$$

$$= \frac{\text{Weight of solute (w)} \times 1000}{\text{Molar mass of solute (m)} \times \text{Weight of H}_2\text{O (W)}}$$

$$\text{Now, molality } m = \frac{0.0125}{18} \times 1000 = 0.69 \approx 0.7$$

77. (c) Suppose the equal mass of methane and oxygen, $w = 1 \text{ g}$

$$\text{Mole fraction of oxygen} = \frac{\frac{w/32}{\frac{w}{32} + \frac{w}{16}}} = \frac{1/32}{\frac{3}{32}} = \frac{1}{3}$$

a. English Proficiency

81. (c) 'Immutable' means 'unchangeable'.

82. (a) 'Ignominious' means 'shameful'.

83. (a) 'Conjecture' means 'making a guess'.

84. (d) Institutional is the correct word to fill the blank. Institutional is the word which means relating to principles esp of law, so legally also every human has rights of freedom and equality.

85. (c) Volumes is the most appropriate option here. Other options do not match here.

86. (c) In the context of the sentence this option 'skirted' is a appropriate word which means to avoid or evade.

87. (b) Immortal means living forever; never dying or decaying. So, among the given, 'perishable' would be its

Let, the total pressure = p

Pressure exerted by oxygen (partial pressure)

$$= \chi_{O_2} \times p_{\text{total}} = p \times \frac{1}{3}$$

$\therefore$ The fraction of total pressure exerted by oxygen is $\frac{1}{3} p$.

Sum of molar conductivity of reactant
= Sum of molar conductivity of products

$$\Lambda^\circ(\text{NaNO}_3) = \Lambda^\circ_m(\text{NaCl}) + \Lambda^\circ_m(\text{KNO}_3) - \Lambda^\circ_m(\text{KCl})$$

$$\text{KCl} - \text{NaCl} = -\Lambda^\circ_m \text{KCl} - \Lambda^\circ_m(\text{NaCl}) = 24$$

Molar conductivities of $\text{KNO}_3 = 111$

$$\text{Molar conductivities of } \text{NaNO}_3 \\ = 111 - 24 = 87 \text{ S cm}^2 \text{ mol}^{-1}$$

$$1 \text{ mole } \text{CaCl}_2 = 2 \text{ F}$$

$$\text{From } Q = it \Rightarrow n \cdot 2F = it$$

$$\Rightarrow t = \frac{n \cdot 2F}{i} = \frac{30}{40} \times \frac{2 \times 96500}{5}$$

$$= 28950 \text{ s} = \frac{28960}{60 \times 60} = 8.04 = 8 \text{ h}$$

80. (a) As the value of reduction potential of metal ion increases, the tendency of metal oxide to get reduce into metal increases.

Since, reduction potential of only Ag is positive among the given, thus Ag_2O readily gets reduced to Ag metal. In other words, it can be said that Ag_2O is the least stable oxide among the given.

correct opposite meaning word. Perishable means likely to decay easily.

88. (c) 'Opposed' is the correct. Opposite meaning word to the given italicised word 'patronised'.

Patronised means provide favour or support.

Opposed means disagreeing with someone/something.

89. (c) Barbarous means extremely brutal, uncivilised. So, 'civilised' would be its correct opposite meaning word.

90. (c) 'Atheist' is the best alternative.

91. (c) 'Epicure' is the best alternative.

92. (b) 'Philanthropist' is the correct answer, other alternatives are not relevant.

93. (c) CBEDA

94. (d) CDEAB

95. (d) DEBAC

b. Logical Reasoning

96. (c) Figure shown in option (c) will make a complete square on joining with the problem figure.

97. (c) From figures (A), (C) and (E),

98. (b) The contents of the third figure in each row (and column) are determined by the contents of the first two figures. Lines are carried forward from the first two figures to the third one, except where two lines appear in the same position, in which they are cancelled out.

99. (d) From the given four positions of a single block,
Faces adjacent to face having red colour
= blue, pink, yellow, green
Clearly, black is opposite to red.

100. (c) In figure (A), the dot is placed in the region which is common to the circle and triangle. Now, we have to search similar common region in the four options. Only in figure (c), we find such a region which is common to the circle and triangle.

101. (b) The pattern is as following

$$\begin{array}{ccccccc} G & \xrightarrow{+3} & J & \xrightarrow{+3} & M & \xrightarrow{+3} & P & \xrightarrow{+3} & S & \xrightarrow{+3} & V \\ 4 & \xrightarrow{\times 2+1} & 9 & \xrightarrow{\times 2+2} & 20 & \xrightarrow{\times 2+3} & 43 & \xrightarrow{\times 2+4} & 90 & \xrightarrow{\times 2+5} & 185 \\ T & \xrightarrow{-2} & R & \xrightarrow{-2} & P & \xrightarrow{-2} & N & \xrightarrow{-2} & L & \xrightarrow{-2} & J \end{array}$$

So, V185J will replace the question mark.

102. (a) According to the given information, the direction of Neeraj is as following

So, it is clearly shown that, Neeraj is 10 m for in East direction from his starting position.

103. (b) Let the average age of 8 men = x yr

Total age of 8 man = $8x$ yr

Now, new average age = $x + 2$ yr

Total age = $8(x + 2)$ yr

Difference of ages = $8(x + 2) - 8x = 8x + 16 - 8x = 16$ yr

$\therefore$ Age of new man = $20 + 16 = 36$ yr

So, the new man is 36 yr older to the man by whom the new man is replaced.

104. (d) The relation is as following

It is clearly shown that, Shikha is the mother of Ankit.

105. (c)

Number of children between P and $R = 40 - (13 + 9 + 4) = 14$

Mathematics

106. (a) Let $z = x + iy$

$$\operatorname{Re}(z + 2) = |z - 2|$$

$$\operatorname{Re}(x + iy + 2) = |x + iy - 2|$$

$$x + 2 = \sqrt{(x - 2)^2 + y^2}$$

Squaring on both sides,

$$(x + 2)^2 = (x - 2)^2 + y^2$$

$$x^2 + 4 + 4x = x^2 + 4 - 4x + y^2 \Rightarrow y^2 = 8x$$

The locus of z is a parabola.

107. (a) Let α, β be the roots of $x^2 - abx - a^2 = 0$

where, $\alpha + \beta = ab$ and $\alpha\beta = -a^2$, which shows product of roots < 0 , i.e. one root must be negative and the other must be positive.

Hence, equation has one positive root and one negative root.

108. (c) Given, $a + 2b + 3c = 12 \forall a, b, c \in \mathbb{R}^+$

As, $AM \geq GM$

$$\frac{a + b + b + c + c + c}{6} \geq \sqrt[6]{ab^2c^3}$$

$$\Rightarrow \frac{12}{6} \geq \sqrt[6]{ab^2c^3} \Rightarrow ab^2c^3 \leq 2^6$$

Hence, the maximum value of ab^2c^3 is 2^6 .

109. (a) a_n of the series = $n(2n + 1)^2 \forall n \in \mathbb{N}$

$$a_n = n[4n^2 + 4n + 1] \Rightarrow a_n = 4n^3 + 4n^2 + n$$

$$S_n = \sum a_n = 4\sum n^3 + 4\sum n^2 + \sum n$$

$$\begin{aligned}
&= 4 \left(\frac{n(n+1)}{2} \right)^2 + \frac{4n(n+1)(2n+1)}{6} + \frac{n(n+1)}{2} \\
&= \frac{n(n+1)}{2} \left[2n^2 + 2n + \frac{4(2n+1)}{3} + 1 \right] \\
&= \frac{n(n+1)}{2} \left[\frac{6n^2 + 6n + (8n+4) + 3}{3} \right] \\
&= \frac{n(n+1)}{2} \left[\frac{6n^2 + 14n + 7}{3} \right] = \frac{n}{6} (n+1)(6n^2 + 14n + 7)
\end{aligned}$$

110. (d) $\log_{225} 70 = \frac{\log_e 70}{\log_e 225} = \frac{\log_e 7 + \log_e 5 + \log_e 2}{\log_e 25 + \log_e 9}$

$$\begin{aligned}
&= \frac{1 + \frac{\log_e 5}{\log_e 7} + \frac{\log_e 2}{\log_e 7}}{2 \frac{\log_e 5}{\log_e 7} + 2 \frac{\log_e 3}{\log_e 7}} \\
&= \frac{1 + \log_7 5 + \log_3 2 \times \log_5 3 \times \log_7 5}{2[\log_7 5 + \log_5 3 \times \log_7 5]} \\
&= \frac{1 + a + abc}{2[a + ab]} = \frac{1 + a + abc}{2a(1 + b)}
\end{aligned}$$

111. (b) Two circles intersect maximum at two distinct points.

Now, two circles can be selected in ${}^{10}C_2$ ways.

The total number of points of intersection are ${}^{10}C_2 \times 2$

$$= \frac{10 \times 9}{1 \times 2} \times 2 = 90$$

112. (c) $\frac{C_1}{C_0} = n, \frac{C_2}{C_1} = \frac{(n-1)}{2}, \frac{C_3}{C_2} = \frac{n-2}{3}$ and so on.

$$\frac{C_1}{C_0} + 2 \frac{C_2}{C_1} + 3 \frac{C_3}{C_2} + \dots + n \frac{C_n}{C_{n-1}} = \Sigma n = \frac{n(n+1)}{2}$$

On putting $n = 20$,

$$\frac{C_1}{C_0} + 2 \frac{C_2}{C_1} + 3 \frac{C_3}{C_2} + \dots + 20 \frac{C_{20}}{C_{19}} = \frac{20 \times 21}{2} = 210$$

113. (c) Given, $\begin{vmatrix} 0 & x-p & x-q \\ x+p & 0 & x-r \\ x+q & x-r & 0 \end{vmatrix} = 0$

$$-(x-p) \begin{vmatrix} x+p & x-r \\ x+q & 0 \end{vmatrix} + (x-q) \begin{vmatrix} x+p & 0 \\ x+q & x-r \end{vmatrix} = 0$$

$$\Rightarrow (x-p)(x+q)(x-r) + (x-q)(x+p)(x-r) = 0$$

$$\Rightarrow (x-r)[(x-p)(x+q) + (x-q)(x+p)] = 0$$

$$\Rightarrow (x-r)[x^2 - px + qx - pq + x^2 - qx + px - pq] = 0$$

$$\Rightarrow (x-r)[2x^2 - 2pq] = 0 \Rightarrow x-r = 0 \text{ or } x^2 - pq = 0$$

either $x = r$ or pq

114. (c) $A \cdot \text{adj } A = |A|I$

$$|A| = xyz - 8x - 3(z-8) + 2(2-2y)$$

$$|A| = xyz - (8x + 3z + 4y) + 28$$

$$\Rightarrow 60 - 20 + 28 = 68$$

$\Rightarrow (\text{adj } A)^{-1}$ always exists whenever $(A)^{-1}$ exists.

$$\therefore A \cdot \text{adj } A = |A|I$$

$$= 68 \begin{bmatrix} 1 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{bmatrix} = \begin{bmatrix} 68 & 0 & 0 \\ 0 & 68 & 0 \\ 0 & 0 & 68 \end{bmatrix}$$

115. (b) Given, $f(x) = 4x - x^2$

$$f(a+1) - f(a-1)$$

$$= [4(a+1) - (a+1)^2] - [4(a-1) - (a-1)^2]$$

$$= [4a + 4 - a^2 - 1 - 2a] - [4a - 4 - a^2 - 1 + 2a]$$

$$\Rightarrow 8 - 4a = 0$$

$$\therefore a = 2$$

116. (c) Let $R = \{(a, b) : a + b \text{ is an even integer } a, b \in \mathbb{Z}\}$

For $a \in \mathbb{Z}$, $a + a = 2a$ is an even integer.

$$\therefore (a, a) \in R \quad \forall a \in \mathbb{Z}$$

$\therefore R$ is reflexive.

Let $(a, b) \in R \Rightarrow a + b$ is an even integer.

$$\Rightarrow (b + a) \text{ is an even integer} \Rightarrow (b, a) \in R$$

$\Rightarrow R$ is symmetric.

$$\text{Let } (a, b), (b, c) \in R$$

$\Rightarrow (a + b)$ and $(b + c)$ are even integers.

$$\Rightarrow (a + b) + (b + c) = (a + c + 2b) \text{ is an even integer.}$$

$$\Rightarrow (a + c + 2b) - 2b = (a + c) \text{ is an even integer.}$$

$$\Rightarrow (a, c) \in R \Rightarrow R \text{ is transitive.}$$

$\therefore R$ is an equivalence relation.

$$\text{Let } R = \{(a, b) : (a - b) \text{ is an even integer, } a, b \in \mathbb{Z}\}.$$

For $a \in \mathbb{Z}$, $a - a = 0$ is an even integer.

$$\therefore (a, a) \in R \quad \forall a \in \mathbb{Z}$$

$\therefore R$ is reflexive.

$$\text{Let } (a, b) \in R \Rightarrow (a - b) \text{ is an even integer.}$$

$$\Rightarrow -(a - b) \text{ is an even integer.}$$

$$\Rightarrow (b - a) \text{ is an even integer} \Rightarrow (b, a) \in R$$

$\Rightarrow R$ is symmetric.

$$\text{Let } (a, b), (b, c) \in R \Rightarrow (a - b), (b - c) \text{ are even integers.}$$

$$\Rightarrow (a - b) + (b - c) \text{ is an even integer.}$$

$$\Rightarrow (a - c) \text{ is an even integer.}$$

$$\Rightarrow (a, c) \in R$$

$\Rightarrow R$ is transitive.

$\therefore R$ is an equivalence relation.

$$\text{Let } R = \{(a, b) : a < b, a, b \in \mathbb{Z}\}$$

Let $a \in \mathbb{Z}$. $a < a$ is false.

$\therefore R$ is not reflexive.

$\therefore R$ is not an equivalence relation.

$$\text{Let } R = \{(a, b) : a = b, a, b \in \mathbb{Z}\}.$$

It is quite easy to check that R is an equivalence relation.

24 SELF STUDY GUIDE BITSAT

117. (b) Since, $\sim(p \vee q) \equiv (\sim p \wedge \sim q)$ and $\sim(p \wedge q) \equiv (\sim p \vee \sim q)$

So, options (a) and (d) are not true.

$\sim(p \rightarrow q) \equiv p \wedge \sim q$, so option (c) is not true.

Now, $p \rightarrow q \equiv p \vee q$

$\sim q \rightarrow \sim p \equiv [\sim(\sim q) \vee \sim p]$

$\equiv q \vee \sim p \equiv \sim p \vee q \Rightarrow p \rightarrow q \equiv (\sim q \rightarrow \sim p)$

118. (a) $4^{-x+0.5} - 7 \cdot 2^{-x} < 4$

Let $2^{-x} = t$

The equation becomes

$$2t^2 - 7t - 4 < 0 \Rightarrow (t - 4)(2t + 1) < 0$$

$$\Rightarrow 2(t - 4) \left\{ t - \left(-\frac{1}{2} \right) \right\} < 0 \Rightarrow -\frac{1}{2} < t < 4$$

Since, $t = 2^{-x} > 0 \forall x \in R$

$$\Rightarrow 0 < t < 4 \Rightarrow 0 < 2^{-x} < 2^2$$

As, 2^x is an increasing function,

$$-x < 2 \text{ or } x > -2$$

Solution is $(-2, \infty)$.

119. (a) $\cos^3 x \cdot \sin 2x = \frac{\cos 3x + 3 \cos x}{4} \times \sin 2x$

$$= \frac{1}{8} (\sin 5x - \sin x) + \frac{3}{8} (\sin 3x + \sin x)$$

$$= \frac{1}{4} \sin x + \frac{3}{8} \sin 3x + \frac{1}{8} \sin 5x$$

$$\text{Here, } n = 5, a_1 = \frac{1}{4}, a_2 = 0, a_3 = \frac{3}{8}, a_4 = 0, a_5 = \frac{1}{8}$$

120. (b) $|\cot x| = \cot x + \frac{1}{\sin x}$

$$\text{Let } \cot x > 0 \Rightarrow \cot x = \cot x + \frac{1}{\sin x} = 0$$

$$\Rightarrow \frac{1}{\sin x} = 0 \text{ which is not possible.}$$

$$\text{Let } \cot x \leq 0 \Rightarrow -\cot x = \cot x + \frac{1}{\sin x}$$

$$\Rightarrow -2 \cot x = \frac{1}{\sin x} \Rightarrow \cos x = -\frac{1}{2} \Rightarrow x = \frac{2\pi}{3}, \frac{8\pi}{3}$$

$\therefore$ The number of solutions is 2.

121. (a) Let $I = (\sin^{-1} x)^3 + (\cos^{-1} x)^3$

$$= (\sin^{-1} x + \cos^{-1} x) [(\sin^{-1} x)^2 + (\cos^{-1} x)^2$$

$$- (\sin^{-1} x)(\cos^{-1} x)]$$

$$= \frac{\pi}{2} \left[(\sin^{-1} x + \cos^{-1} x)^2 - 3 \sin^{-1} x \left(\frac{\pi}{2} - \sin^{-1} x \right) \right]$$

$$= \frac{\pi}{2} \left(\frac{\pi^2}{4} - \frac{3\pi}{2} \sin^{-1} x + 3(\sin^{-1} x)^2 \right)$$

$$= \frac{\pi}{2} \left[3 \left((\sin^{-1} x)^2 - \frac{\pi}{2} (\sin^{-1} x) + \frac{\pi^2}{16} - \frac{\pi^2}{16} \right) + \frac{\pi^2}{4} \right]$$

$$= \frac{\pi}{2} \left(\frac{\pi^2}{16} + 3 \left(\sin^{-1} x - \frac{\pi}{4} \right)^2 \right)$$

$$\text{Now, } \frac{\pi}{4} \geq \sin^{-1} x - \frac{\pi}{4} \geq -\frac{3\pi}{4}$$

$$\Rightarrow \frac{9\pi^2}{16} \geq \left(\sin^{-1} x - \frac{\pi}{4} \right)^2 \geq 0 \Rightarrow I \geq \frac{\pi}{2} \cdot \frac{\pi^2}{16} = \frac{\pi^3}{32}$$

122. (b) Let $P(x, y)$ be the original position of the point w.r.t. the original axes. Let us move the origin at new position to (h, k) .

Hence, the position of the same point P in the new system is

$$x' = x - h \Rightarrow y' = y - k$$

Here, $(h, k) = (1, 2)$

$$\therefore x' = (x - 1), y' = (y - 2)$$

According to the question,

$$y^2 - 8x - 4y + 12 = (y - 2)^2 - 4a(x - 1)$$

$$\Rightarrow y^2 - 8x - 4y + 12 = y^2 - 4y + 4 - 4ax + 4a$$

On comparing respective coefficients, we get

$$4a = 8 \Rightarrow a = 2$$

123. (d) Equations of the bisectors of the angles between the given straight lines are given by

$$\frac{3x + 4y + 7}{\sqrt{9 + 16}} = \pm \frac{12x + 5y - 8}{\sqrt{144 + 25}}$$

$$\Rightarrow 13(3x + 4y + 7) = \pm 5(12x + 5y - 8)$$

$$\Rightarrow 39x + 52y + 91 = \pm (60x + 25y - 40)$$

Taking positive signs,

$$39x + 52y + 91 = 60x + 25y - 40$$

$$\Rightarrow -21x + 27y + 131 = 0$$

$$\Rightarrow 21x - 27y - 131 = 0$$

Taking negative signs,

$$(39x + 52y + 91) = -(60x + 25y - 40)$$

$$\Rightarrow 99x + 77y + 51 = 0$$

124. (b) Since, the circle touches X-axis,

$$(x - h)^2 + (y - k)^2 = k^2 \quad \dots (i)$$

Also, it passes through the points $(1, -2)$ and $(3, -4)$.

$$(1 - h)^2 + (-2 - k)^2 = k^2 \quad \dots (ii)$$

$$\text{and } (3 - h)^2 + (-4 - k)^2 = k^2 \quad \dots (iii)$$

Subtracting Eq. (iii) from Eq. (ii), we get

$$h = k + 5$$

On solving these equations, we get

$$k = -10, -2 \text{ and } h = -5, 3$$

By putting the values of $(h, k) = (-5, -10)$ or $(3, -2)$ in Eq. (i), we get

$$x^2 + y^2 + 10x + 20y + 25 = 0 \text{ or } x^2 + y^2 - 6x + 4y + 9 = 0$$

125. (b) $x = 9$ meets the hyperbola at $(9, 6\sqrt{2})$ and $(9, -6\sqrt{2})$.
Then, the equations of tangent at these points are $3x - 2\sqrt{2}y - 3 = 0$ and $3x + 2\sqrt{2}y - 3 = 0$. The combined equation of these two tangents is $9x^2 - 8y^2 - 18x + 9 = 0$.

126. (d) Let the points be $A(10\hat{i} + 3\hat{j})$,

$$B(12\hat{i} - 15\hat{j}) \text{ and } C(a\hat{i} + 11\hat{j}).$$

$$AB = |2\hat{i} - 18\hat{j}| \text{ and } AC = (a - 10)\hat{i} + 8\hat{j}$$

Since, A, B and C are collinear, then

$$\frac{2}{a - 10} = -\frac{18}{8} \Rightarrow a = \frac{82}{9}$$

127. (d) We have, $|a| = 3, |b| = 4$ and $|c| = 5$.

It is given that

$$a \perp (b + c), b \perp (c + a) \text{ and } c \perp (a + b)$$

$$\Rightarrow a \cdot (b + c) = 0, b \cdot (c + a) = 0 \text{ and } c \cdot (a + b) = 0$$

$$\Rightarrow a \cdot b + a \cdot c = b \cdot c + b \cdot a = c \cdot a + c \cdot b = 0$$

$$\text{or } a \cdot b + b \cdot c + c \cdot a = 0$$

(adding all the above equations)

$$\begin{aligned} \text{Now, } |a + b + c|^2 &= |a|^2 + |b|^2 + |c|^2 + 2(a \cdot b + b \cdot c + c \cdot a) \\ &= 3^2 + 4^2 + 5^2 = 50 \end{aligned}$$

$$\therefore |a + b + c| = 5\sqrt{2}$$

128. (d) We have, $|(a \times b) \cdot c| = |a| |b| |c|$

$$\Rightarrow ||a|| |b| |c| |\sin \theta \cos \alpha| = |a| |b| |c|$$

$$\Rightarrow |\sin \theta| |\cos \alpha| = 1 \Rightarrow \theta = \frac{\pi}{2} \text{ and } \alpha = 0$$

$$\Rightarrow a \perp b \text{ and } c \parallel \hat{n} \Rightarrow a \perp b \text{ and } c \perp \text{both } a \text{ and } b.$$

$$\Rightarrow a, b, c \text{ are mutually perpendicular.}$$

$$\Rightarrow a \cdot b = b \cdot c = c \cdot a = 0$$

129. (c) Let each edge of cube be a , then coordinates of the vertices of cube are

$$O(0, 0, 0), A(a, 0, 0), B(0, a, 0), C(0, 0, a), N(a, a, 0), P(a, a, a), L(0, a, a), M(a, 0, a)$$

Direction ratios of the diagonals OP, AL, BM and CN are $(a, a, a), (-a, a, a), (a, -a, a)$ and $(a, a, -a)$.

Let θ be the acute angle between diagonals OP and AL .

$$\begin{aligned} \therefore \cos \theta &= \frac{a_1 a_2 + b_1 b_2 + c_1 c_2}{\sqrt{a_1^2 + b_1^2 + c_1^2} \sqrt{a_2^2 + b_2^2 + c_2^2}} \\ &= \frac{a \times (-a) + a \times a + a \times a}{\sqrt{a^2 + a^2 + a^2} \sqrt{(-a)^2 + a^2 + a^2}} \\ &= \frac{-a^2 + a^2 + a^2}{\sqrt{3a^2} \sqrt{3a^2}} = \frac{a^2}{a\sqrt{3} \times a\sqrt{3}} \end{aligned}$$

$$\Rightarrow \cos \theta = \frac{1}{3} \Rightarrow \theta = \cos^{-1}\left(\frac{1}{3}\right)$$

130. (b) Given lines are

$$L_1: \frac{x+1}{3} = \frac{y+2}{1} = \frac{z+1}{2} \text{ and } L_2: \frac{x-2}{1} = \frac{y+2}{2} = \frac{z-3}{3}$$

Now, convert into vector form

$$L_1: (-\hat{i} - 2\hat{j} - \hat{k}) + \lambda(3\hat{i} + \hat{j} + 2\hat{k})$$

$$L_2: (2\hat{i} + 2\hat{j} + 3\hat{k}) + \mu(\hat{i} + 2\hat{j} + 3\hat{k})$$

Line L_1 comparing with $a_1 + \lambda b_1$,

and L_2 comparing with $a_2 + \mu b_2$, then we have

$$b_1 = 3\hat{i} + \hat{j} + 2\hat{k} \text{ and } b_2 = \hat{i} + 2\hat{j} + 3\hat{k}$$

Perpendicular to both b_1 and $b_2 = b_1 \times b_2$

$$\begin{aligned} &= \begin{vmatrix} \hat{i} & \hat{j} & \hat{k} \\ 3 & 1 & 2 \\ 1 & 2 & 3 \end{vmatrix} \\ &= \hat{i}(3-4) - \hat{j}(9-2) + \hat{k}(6-1) = -\hat{i} - 7\hat{j} + 5\hat{k} \end{aligned}$$

$$\begin{aligned} \therefore \text{Required unit vector} &= \frac{-\hat{i} - 7\hat{j} + 5\hat{k}}{\sqrt{(-1)^2 + (-7)^2 + (5)^2}} \\ &= \frac{-\hat{i} - 7\hat{j} + 5\hat{k}}{\sqrt{75}} = \frac{-\hat{i} - 7\hat{j} + 5\hat{k}}{5\sqrt{3}} \end{aligned}$$

131. (b) The given line is $r = a + tb$, where $a = 2\hat{i} - 2\hat{j} + 3\hat{k}$, $b = \hat{i} - \hat{j} + 4\hat{k}$ and given plane is $r \cdot n = d$, where $n = \hat{i} + 5\hat{j} + \hat{k}, d = 5$.

$$\text{Since, } b \cdot n = 1 - 5 + 4 = 0$$

$\therefore$ Given line is parallel to given plane.

$\therefore$ The distance between the line and the plane is equal to length of the perpendicular from the point $a = 2\hat{i} - 2\hat{j} + 3\hat{k}$ on the line to the given plane.

$$\begin{aligned} \therefore \text{Required distance} &= \left| \frac{(2\hat{i} - 2\hat{j} + 3\hat{k}) \cdot (\hat{i} + 5\hat{j} + \hat{k}) - 5}{\sqrt{1 + 25 + 1}} \right| \\ &= \left| \frac{2 - 10 + 3 - 5}{\sqrt{27}} \right| = \frac{10}{3\sqrt{3}} \end{aligned}$$

132. (c) Let E_1 = event of getting both red cards

$$E_2 = \text{event of getting both kings}$$

and $E_1 \cap E_2$ = event of getting 2 kings of red cards

$$\therefore P(E_1) = \frac{{}^{26}C_2}{{}^{52}C_2} = \frac{325}{1326}, P(E_2) = \frac{{}^4C_2}{{}^{52}C_2} = \frac{6}{1326}$$

and $P(E_1 \cap E_2) = \frac{{}^2C_2}{{}^{52}C_2} = \frac{1}{1326}$

$$\begin{aligned} \therefore P(\text{both red or both kings}) &= P(E_1 \cup E_2) \\ &= P(E_1) + P(E_2) - P(E_1 \cap E_2) \\ &= \frac{325}{1326} + \frac{6}{1326} - \frac{1}{1326} = \frac{330}{1326} = \frac{55}{221} \end{aligned}$$

133. (d) Since, A and B are independent events.

$$\therefore P(A/B) = P(A) = \frac{1}{2} \Rightarrow P\left(\frac{A}{A \cup B}\right) = \frac{P[A \cap (A \cup B)]}{P(A \cup B)}$$

$$\begin{aligned} \Rightarrow P\left[\frac{A}{A \cup B}\right] &= \frac{P(A)}{P(A \cup B)} = \frac{1/2}{\frac{1}{2} + \frac{1}{5} - \frac{1}{10}} \\ &= \frac{1/2}{\frac{1}{2} + \frac{1}{5} - \frac{1}{10}} = \frac{1/2}{\frac{6}{10}} = \frac{5}{6} \end{aligned}$$

$$\text{Similarly, } P\left(\frac{A \cap B}{A' \cup B'}\right) = P\left(\frac{A \cap B}{(A \cap B)'}\right) = 0$$

134. (b) Let E_1 = coin shows head, E_2 = coin shows tail,

A = drawn ball is blue

$$P(E_1) = \frac{1}{2} = P(E_2)$$

$P(A/E_1)$ = Probability of drawing a blue ball from bag I = $2/7$

$$P\left(\frac{A}{E_2}\right) = \text{Probability of drawing a blue ball from bag II} = \frac{6}{8}$$

By Baye's theorem, we have

$$\begin{aligned} P\left(\frac{E_1}{A}\right) &= \frac{P(E_1)P\left(\frac{A}{E_1}\right)}{P(E_1)P\left(\frac{A}{E_1}\right) + P(E_2)P\left(\frac{A}{E_2}\right)} \\ &= \frac{\frac{1}{2} \times \frac{2}{7}}{\frac{1}{2} \times \frac{2}{7} + \frac{1}{2} \times \frac{6}{8}} = \frac{\frac{2}{7}}{\frac{2}{7} + \frac{6}{8}} = \frac{2}{7} \times \frac{56}{58} = \frac{8}{29} \end{aligned}$$

135. (c) Given, $E(X) = 3$ and $E(X^2) = 11$

$$\text{Variable of } X = E(X^2) - [E(X)]^2 = 11 - 3^2 = 11 - 9 = 2$$

136. (d) Given, $x_1 + x_2 + x_3 + \dots + x_{10} = 12$

$$\text{and } x_1^2 + x_2^2 + \dots + x_{10}^2 = 18$$

$$\begin{aligned} \sigma^2 &= \frac{1}{n} \sum x^2 - \left(\frac{1}{n} \sum x\right)^2 \\ &= \frac{1}{10} \times 18 - \left(\frac{1}{10} \times 12\right)^2 = \frac{9}{5} - \frac{36}{25} = \frac{9}{25} \end{aligned}$$

$\therefore$ Standard deviation = $3/5$

137. (c) Let PQ be the chimney whose height is h metres.

$$\text{In } \triangle BPQ, \tan 60^\circ = \frac{PQ}{BP} \Rightarrow \sqrt{3} = \frac{h}{x} \Rightarrow h = \sqrt{3}x \quad \dots(i)$$

$$\text{and in } \triangle APQ, \tan 30^\circ = \frac{PQ}{AP}$$

$$\Rightarrow \frac{1}{\sqrt{3}} = \frac{h}{50+x} \Rightarrow 50+x = h\sqrt{3}$$

$$\Rightarrow 50+x = 3x \Rightarrow x = 25 \quad [\text{using Eq. (i)}]$$

$\therefore$ Height of the chimney = $25\sqrt{3}$ m

138. (c) The required limit

$$\begin{aligned} &= \lim_{x \rightarrow 0} \frac{\sqrt{(1-\cos x^2)(1+\cos x^2)}}{(1-\cos x)\sqrt{1+\cos x^2}} \\ &= \lim_{x \rightarrow 0} \left(\frac{\frac{\sin x^2}{x^2}}{2\left(\frac{\sin^2 x/2}{x^2}\right)} \right) \cdot \frac{1}{\sqrt{1+\cos x^2}} = \frac{1}{2 \times \frac{1}{4} \times \sqrt{2}} = \sqrt{2} \end{aligned}$$

$$139. (c) f'(1-0) = \lim_{h \rightarrow 0} \frac{f(1-h) - f(1)}{-h}$$

$$= \lim_{h \rightarrow 0} \frac{a(1-h)^2 + 1 - (1+a)}{-h} = \lim_{h \rightarrow 0} \frac{a(h^2 - 2h)}{-h} = 2a$$

$$f'(1+0) = \lim_{h \rightarrow 0} \frac{f(1+h) - f(1)}{h}$$

$$= \lim_{h \rightarrow 0} \frac{(1+h)^2 + a(1+h) + b - (1+a)}{h}$$

$$= \lim_{h \rightarrow 0} \frac{h^2 + 2h + ah + b}{h} = 2 + a, \text{ if } b = 0$$

$$\text{Thus, } 2a = 2 + a, b = 0 \Rightarrow a = 2, b = 0$$

140. (c) We have, $\frac{dx}{dt} = 2t + 3$ and $\frac{dy}{dt} = 4t - 2$

$$\therefore \frac{dy}{dx} = \frac{dy/dt}{dx/dt} = \frac{4t-2}{2t+3}$$

Thus, slope of the tangent to the curve at the point $t = 2$ is

$$\left[\frac{dy}{dx}\right]_{t=2} = \frac{4(2)-2}{2(2)+3} = \frac{6}{7}$$

$$141. (c) \text{ Let } I = \int \frac{1}{1-2\sin x} dx$$

$$\text{On putting } \sin x = \frac{2 \tan \frac{x}{2}}{1 + \tan^2 \frac{x}{2}}, \text{ we get}$$

$$\begin{aligned}
 I &= \int \frac{1}{1 - \frac{4 \tan \frac{x}{2}}{1 + \tan^2 \frac{x}{2}}} dx = \int \frac{1 + \tan^2 \frac{x}{2}}{1 + \tan^2 \frac{x}{2} - 4 \tan \frac{x}{2}} dx \\
 &= \int \frac{\sec^2 \frac{x}{2}}{1 + \tan^2 \frac{x}{2} - 4 \tan \frac{x}{2}} dx \\
 &= 2 \int \frac{1}{\left(\tan \frac{x}{2} - 2\right)^2 - (\sqrt{3})^2} d\left(\tan \frac{x}{2}\right) \\
 &= 2 \int \frac{dt}{(t-2)^2 - (\sqrt{3})^2}, \text{ where } t = \tan \frac{x}{2} \\
 &= 2 \cdot \frac{1}{2\sqrt{3}} \log \left| \frac{t-2-\sqrt{3}}{t-2+\sqrt{3}} \right| + c = \frac{1}{\sqrt{3}} \log \left| \frac{\tan \frac{x}{2} - 2 - \sqrt{3}}{\tan \frac{x}{2} - 2 + \sqrt{3}} \right| + c
 \end{aligned}$$

142. (a) Let $I = \int_0^1 \frac{\log(1+x)}{1+x^2} dx = \int_0^{\pi/4} \frac{\log(1+\tan\theta)}{(1+\tan^2\theta)} \sec^2\theta d\theta$

Let $x = \tan\theta \Rightarrow dx = \sec^2\theta d\theta$

$$= \int_0^{\pi/4} \log(1+\tan\theta) d\theta = \int_0^{\pi/4} \log\left[1+\tan\left(\frac{\pi}{4}-\theta\right)\right] d\theta$$

$$= \int_0^{\pi/4} \log\left(1+\frac{1-\tan\theta}{1+\tan\theta}\right) d\theta$$

$$= \int_0^{\pi/4} \log\left(\frac{2}{1+\tan\theta}\right) d\theta = \log 2 \int_0^{\pi/4} 1 d\theta - I$$

$$\Rightarrow 2I = \frac{\pi}{4} \log 2 \Rightarrow I = \frac{\pi}{8} \log 2$$

143. (c) Required area

$$= \int_0^{\pi/4} \sin x dx + \int_{\pi/4}^{\pi/2} \cos x dx$$

$$= -[\cos]_0^{\pi/4} + [\sin x]_{\pi/4}^{\pi/2} = 2\left(1 - \frac{1}{\sqrt{2}}\right) = (2 - \sqrt{2}) \text{ sq units}$$

144. (b) $\left(\frac{x+y-1}{x+y-2}\right) \frac{dy}{dx} = \left(\frac{x+y+1}{x+y+2}\right)$

Put $x+y=v$

$$\therefore 1 + \frac{dy}{dx} = \frac{dv}{dx} \text{ or } \left(\frac{v-1}{v-2}\right) \left(\frac{dv}{dx} - 1\right) = \left(\frac{v+1}{v+2}\right)$$

$$\Rightarrow \frac{dv}{dx} - 1 = \frac{(v+1)(v-2)}{(v-1)(v+2)} = \frac{v^2 - v - 2}{v^2 + v - 2} \text{ or } \frac{dv}{dx} = \frac{2v^2 - 4}{(v^2 + v - 2)}$$

$$\Rightarrow \frac{(v^2 + v - 2)}{(v^2 - 2)} dv = 2 dx \Rightarrow \left(1 + \frac{v}{v^2 - 2}\right) dv = 2 dx$$

On integrating, we get

$$v + \frac{1}{2} \log |v^2 - 2| = 2x + c$$

or $(y-x) + \frac{1}{2} \log |(x+y)^2 - 2| = c$

Given, $y = 1$ when $x = 1$

$$\therefore 0 + \frac{1}{2} \log 2 = c \text{ or } (y-x) + \frac{1}{2} \log \left| \frac{(x+y)^2 - 2}{2} \right| = 0$$

or $\log \left| \frac{(x+y)^2 - 2}{2} \right| = 2(x-y)$

145. (d) Given, $y = \sin\left(2 \tan^{-1} \sqrt{\frac{1-x}{1+x}}\right)$

$$\text{Let } x = \cos 2\theta \Rightarrow y = \sin\left(2 \tan^{-1} \sqrt{\frac{1-\cos 2\theta}{1+\cos 2\theta}}\right)$$

$$\Rightarrow y = \sin\left(2 \tan^{-1} \sqrt{\frac{2 \sin^2 \theta}{2 \cos^2 \theta}}\right) \Rightarrow y = \sin[2 \tan^{-1}(\tan \theta)]$$

$$\Rightarrow y = \sin 2\theta \Rightarrow y = \sqrt{1 - \cos^2 2\theta} \Rightarrow y = \sqrt{1 - x^2}$$

$$\therefore \frac{dy}{dx} = \frac{1}{2\sqrt{1-x^2}} (-2x) = -\frac{x}{\sqrt{1-x^2}}$$

146. (b) We have, $y = x(x-1)^2$

$$\therefore \frac{dy}{dx} = (x-1)^2 \cdot 1 + 2x(x-1) = 3x^2 - 4x + 1 = (x-1)(3x-1)$$

For maximum or minimum, $\frac{dy}{dx} = 0$

$$\Rightarrow (x-1)(3x-1) = 0 \Rightarrow x = \frac{1}{3}, 1$$

Now, $\frac{d^2y}{dx^2} = 6x - 4 \Rightarrow \left[\frac{d^2y}{dx^2}\right]_{x=\frac{1}{3}} = -2 < 0$

$\therefore y$ is maximum when $x = \frac{1}{3}$ and maximum value is

$$[y]_{x=\frac{1}{3}} = \frac{4}{27}$$

Also,

$$\left[\frac{d^2y}{dx^2}\right]_{x=1} = 2 > 0$$

$\therefore y$ is minimum when $x = 1$

147. (b) We have, $\cos y \frac{dy}{dx} + \frac{4}{x} \sin y = \frac{e^x}{x^3}$

Let $\sin y = t$

28 SELF STUDY GUIDE BITSAT

$$\Rightarrow \cos y \frac{dy}{dx} = \frac{dt}{dx} \therefore \frac{dt}{dx} + \frac{4}{x}t = \frac{e^x}{x^3}$$

$$\text{IF} = e^{\int \frac{4}{x} dx} = e^{4 \log x} = x^4$$

The solution is

$$\therefore tx^4 = \int x^4 \cdot \frac{e^x}{x^3} dx = xe^x - e^x + c \therefore \sin y x^4 = xe^x - e^x + c$$

$$\therefore x = 1, y = 0$$

$$[\because c = 0]$$

$$\therefore \sin y = e^x(x-1)x^{-4}$$

148. (a) Let us make the table from the given data

Player A			Player B		
x_i	$x_i - 61$	$(x_i - 61)^2$	y_i	$y_i - 61$	$(y_i - 61)^2$
58	-3	9	94	33	1089
59	-2	4	26	-35	1225
60	-1	1	92	31	961
54	-7	49	65	4	16
65	4	16	96	35	1225
66	5	25	78	17	289
52	-9	81	14	-47	2209
75	14	196	34	-27	729
69	8	64	98	37	1369
52	-9	81	13	-48	2304
$\sum x_i = 610$		$\sum (x_i - 61)^2 = 526$	$\sum y_i = 610$		$\sum (y_i - 61)^2 = 11416$

$$\text{For player A, Mean} = \frac{\sum x_i}{n} = \frac{610}{10} = 61$$

$$\begin{aligned} \text{SD} &= \sqrt{\frac{\sum (x_i - 61)^2}{N}} \\ &= \sqrt{\frac{526}{10}} = 7.25 \end{aligned}$$

$$\text{For player B, Mean} = \frac{\sum y_i}{n} = \frac{610}{10} = 61$$

$$\begin{aligned} \text{SD} &= \sqrt{\frac{\sum (y_i - 61)^2}{N}} \\ &= \sqrt{\frac{11416}{10}} = 33.79 \end{aligned}$$

Since, SD for player A is 7.25 < SD for player B is 33.79.

Hence, player A is more consistent player.

149. (b) Table for equation $x + y = 8$ is

x	0	8
$y = 8 - x$	8	0

Table for equation $3x + 5y = 15$ is

x	0	5
$y = \frac{15 - 3x}{5}$	3	0

It can be concluded from the graph, that there is no point which can satisfy all the constraints simultaneously. Therefore, the problem has no feasible solution.

$$\begin{aligned} 150. (a) \text{ Substitute 0 for } y \text{ in the equation } 4y^2 &= 4x^2 - x^3, \\ 0 &= x^2(4 - x) \Rightarrow x = 0, x = 4 \end{aligned}$$

It means curve makes the loop symmetric about X-axis between 0 and 4.

$$\text{Area} = 2 \int_0^4 y dx = \frac{2}{2} \int_0^4 \sqrt{4x^2 - x^3} dx = \int_0^4 x \sqrt{4 - x} dx$$

$$\text{Let } 4 - x = t \Rightarrow -dx = dt$$

$$\text{Area} = - \int_4^0 (4 - t) \sqrt{t} dt$$

$$= \int_0^4 (4\sqrt{t} - t\sqrt{t}) dt = \left[4 \times \frac{2}{3} t^{3/2} - \frac{2}{5} t^{5/2} \right]_0^4$$

$$= \frac{8}{3} \times 8 - \frac{2}{5} \times 32 = \frac{64}{3} - \frac{64}{5} = 64 \times \frac{2}{15} = \frac{128}{15}$$
